LRAMVA Work Form: Documentation for Streetlighting Projects

Version 4.0 (202

Legend

User Inputs (Green)

Instructions

Please provide documentation and/or data to substantiate program savings that were not provided in the IESO's verified results reports (i.e., streetlighting projects).

Distributors are encouraged to provide data in the following format, and complete a separate set of following tables for each project. The tables below are meant to be an example. Distributors should complete the tables based on the actual project details. Please create the necessary links to Tab 4/5 and tabulations within this LRAMVA workform to calculate the LRAMVA amounts. Alternatively, LDCs may submit a separate attachment with the project level details for billed demand by type of bulb.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 1 of 10

UPDATED COST OF CAPITAL AND CAPITAL STRUCTURE

2

1

3 1. INTRODUCTION

4 This Schedule provides an overview of Hydro Ottawa's capital structure, financing approach,

5 costs associated with short-term and long-term debt, and the calculation of Return on Equity

6 ("ROE") as required under section 2.5 of the Chapter 2 Filing Requirements for Electricity

7 Distribution Rate Applications, as updated on July 12, 2018 and addended on July 15, 2019.

8

9 2. CAPITAL STRUCTURE

10 Hydro Ottawa's capital structure is set in accordance with the OEB guidelines provided in the

11 Report of the Board on the Cost of Capital for Ontario's Regulated Utilities issued in 2009 (the

12 "OEB Cost of Capital Report").1 Hydro Ottawa targets a 60:40 debt to equity range, as

13 evidenced by the utility's past and current practices. The 60% debt component is comprised of a

14 targeted split between 56% long-term debt and 4% short-term debt.

15

16 UPDATED Attachment 5-1-1(A): Appendix 2-OA - Capital Structure and Cost of Capital outlines

17 Hydro Ottawa's capital structure for both the OEB-approved years of 2016-2020 and the Test

18 Years of 2021-2025.

19

3. FINANCING APPROACH

- 21 Hydro Ottawa continues to use a financing approach whereby funding is received through its
- 22 parent company, Hydro Ottawa Holding Inc. ("Holding Company"). All external debt is managed
- 23 by the Holding Company as it maintains a strong investment grade credit rating at the parent
- 24 company level for financing purposes. This credit rating is required for the Holding Company to
- 25 issue private debt issuances into the Canadian debt market to support its subsidiaries/affiliates'
- 26 financing requirements. Hydro Ottawa receives all of its financing from the Holding Company via

Ontario Energy Board, Report of the Board on the Cost of Capital for Ontario's Regulated Utilities, EB-2009-0084 (December 11, 2009).

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 2 of 10

- 1 intercompany loans on a "pass through" basis for the rates, terms, and conditions that the
- 2 Holding Company receives from the external markets.

3

- 4 It is Hydro Ottawa's intention to provide regulatory efficiency and rate stability over the five-year
- 5 term of this Application by committing to the cost of capital parameters shown for each year and
- 6 to not make any updates to any component of the cost of capital for the period covered.

7

8 3.1. CREDIT RATING

- 9 The current credit rating for the Holding Company by Dominion Bond Rating Service ("DBRS")
- 10 is "A" / Negative Trend and by Standard and Poor's Global ("S&P") "BBB+" / Stable.

11

- 12 The most recent credit rating reports are provided in Attachment 1-3-4(A): Ratings Report for
- 13 Hydro Ottawa Holding Inc. issued by Dominion Bond Rating Service and Attachment 1-3-4(B):
- 14 Ratings Report for Hydro Ottawa Holding Inc. issued by Standard and Poor's.

15

16 3.2. SHORT-TERM DEBT

- 17 The Holding Company maintains short-term credit facilities to support the liquidity needs of
- 18 Hydro Ottawa. These facilities are used to cover periodic working capital deficiencies, bridge
- 19 financing requirements until long-term debt is warranted, and post required prudentials with the
- 20 Independent Electricity System Operator ("IESO").

21

- The cost of short-term financing is passed onto Hydro Ottawa on the same terms and conditions
- 23 that the Holding Company receives from external markets through its credit facilities. Terms and
- 24 conditions of short-term borrowings are governed by the "Credit Agreement" dated January 1,
- 25 2009, which is appended to this Application as Attachment 5-1-1(C): Credit Agreement as
- 26 Amended.

- 28 For the purpose of this Application, Hydro Ottawa has utilized the short-term debt rate of 2.75%,
- 29 as provided in the OEB's 2020 Cost of Capital Parameters letter dated October 31, 2019, for the

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 3 of 10

1 years 2021-2025.2 This will provide regulatory efficiency and rate stability by leaving this rate in

2 effect until December 31, 2025.

3

4 3.3. LONG-TERM DEBT

5 As required, the Holding Company issues long-term debt to support the financing requirements

6 of Hydro Ottawa. Similar to short-term financing, the costs associated with long-term financing

7 are also passed on to Hydro Ottawa on the same terms and conditions as the Holding Company

8 receives from the external markets.

9

In the absence of associated external financing at the Holding Company level, long-term debt is charged to Hydro Ottawa at the deemed cost of debt as calculated at the time of the fund transfer, as per the methodology of the OEB Cost of Capital Report. All debt using a deemed rate accumulates until the next external long-term financing is conducted by the Holding Company, at which time the deemed rates are converted into the new rate, terms, and conditions as per the external bond issuance, which includes the actual cost of debt plus any incurred issuance costs. Any issuance costs are amortized over a five-year period which is consistent with the write-off for tax purposes.

18

By using this approach, Hydro Ottawa primarily relies on the embedded or actual cost of long-term debt and only uses the deemed long-term debt rate as a proxy to bridge the period between external financings.

22

The markets are not receptive to long-term debt issuances under \$100M due to liquidity and listing requirements, and therefore smaller issuances, if attainable, would dictate premium pricing. As well, smaller and more frequent issuances will incur more costs than larger, less frequent issuances due to the fixed nature of most of the required issuance costs. The financing arrangement between Hydro Ottawa and the Holding Company is beneficial to both Hydro Ottawa and ratepayers, as it allows the utility to target the deemed capital structure and borrow

. .

²⁹ Ontario Energy Board, Letter re: 2020 Cost of Capital Parameters (October 31, 2019).

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 4 of 10

1 in smaller tranches (without paying premiums) than would otherwise be attainable in the

2 financial markets.

3

4 If the Holding Company has not issued any new external debt when the aggregate of Hydro

5 Ottawa's smaller debt issuances using the deemed long-term debt rate reach a quantum where

6 an external bond issuance would otherwise be prudent and cost-effective (generally

7 approximately \$150M-\$250M for Hydro Ottawa), the indicative borrowing rate for the Holding

8 Company will be utilized to emulate an external issuance at that time.

9

Accordingly, on October 16, 2019, Hydro Ottawa issued two new promissory notes to the Holding Company comprised of tenures of 10 years and 30 years, for a combined aggregate principal of \$250M. The 10-year and 30-year promissory notes bear interest at a fixed rate of 2.66% and 3.21%, respectively. The rates for the promissory notes were based on the prevailing BMO Capital Markets weekly indicative rates for the Holding Company, with no allowance for issuance costs. With this issuance, Hydro Ottawa secured long-term financing at a time when the Government of Canada 10-year and 30-year bond yields were close to historical lows. The proceeds from this issuance were used to convert the \$180M of accumulated long-term debt using the deemed rate at a weighted average rate of 3.94%, as well as to reduce the short-term borrowings by \$70M in order to bring the short-term amount in line with the deemed capital structure of 4%. Hydro Ottawa has reflected these rates in the weighted average long-term debt rates for 2019-2025, as calculated in Attachment 5-1-1(B): OEB Appendix 2-OB - Debt Instruments.

23

As shown in Attachment 5-1-1(B): Appendix 2-OB - Debt Instruments, this issuance has reduced the weighted average cost of existing embedded long-term debt as of December 31, 2020 to 3.35%.

27

8 The financial strength of the Holding Company and this type of financing arrangement optimizes

29 Hydro Ottawa's borrowing requirements on both short-term and long-term financing. It provides

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 5 of 10

- 1 financing to Hydro Ottawa in tranches that meets its capital structure requirements using both
- 2 actual and deemed rates in an objective and transparent manner. In turn, this minimizes
- 3 borrowing costs for the utility and ratepayers, as can be seen by the weighted average
- 4 long-term debt rate forecast range of 3.35% to 3.69% for the years 2021-2025 shown in Table 3
- 5 below.
- 7 The current long-term debt notes issued by Hydro Ottawa are included as the following
- 8 Attachments to this Schedule:
- 9
- Attachment 5-1-1(D): Grid Promissory Note
- Attachment 5-1-1(E): Hydro Ottawa Limited \$138.667M Promissory Note
- Attachment 5-1-1(F): Hydro Ottawa Limited \$121.333M Promissory Note
- Attachment 5-1-1(G): Hydro Ottawa Limited \$107.185M Promissory Note
- Attachment 5-1-1(H): Hydro Ottawa Limited \$50M Promissory Note
- Attachment 5-1-1(I): Hydro Ottawa Limited \$15.999M Promissory Note
- Attachment 5-1-1(J): Hydro Ottawa Limited \$14.001M Promissory Note
- Attachment 5-1-1(K): Hydro Ottawa Limited \$87.5M Promissory Note
- Attachment 5-1-1(L): Hydro Ottawa Limited \$162.5M Promissory Note
- 19
- 20 There was no profit or loss on redemption of debt.
- 21

22 3.4. ANTICIPATED LONG-TERM DEBT

- 23 Hydro Ottawa plans to issue further long-term debt to support its ongoing capital expenditure
- 24 requirements, as presented in this Application. The anticipated additional borrowing requirement
- 25 for Hydro Ottawa from 2021-2025 is outlined in Table 1 below.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 6 of 10

Table 1 – Anticipated Long-Term Borrowing Requirements (\$'000,000s)

Year	Amount
2021	\$80.0
2022	\$0.0
2023	\$60.0
2024	\$0.0
2025	\$0.0

2

1

3 3.5. COST OF LONG-TERM DEBT

- 4 The long-term debt rate is calculated as the weighted average rate of existing embedded debt
- 5 and forecast debt planned to be issued from 2021-2025. The calculation to determine the
- 6 anticipated long-term debt rate is comprised of three components:

7

8

- The forecast Government of Canada 10-year bond yield;
- The 30-year to 10-year Government of Canada bond yield spread; and
- The Hydro Ottawa credit risk spread.

11

12 The use of these three components emulates the calculation of the OEB Cost of Capital Report.

13

- 14 The underlying forecast for the Government of Canada 10-year yield is that which is presented
- 15 in the October 2019 Consensus Long-Term Forecast (which is issued twice per year, in October
- 16 and April).

- 18 Hydro Ottawa 10-year bonds are forecast by adding the Hydro Ottawa historical credit spread of
- 19 112 basis points ("bps") for 10-year bonds to the forecast Government of Canada 10-year yield.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 7 of 10

- 1 The 30-year Government of Canada bond yield is calculated using the Consensus Long-Term
- 2 Forecast 10-year bond yield plus 44 bps, which as of October 2019 is the historical five-year
- 3 average spread of the 30-year over 10-year Government of Canada bond yield, as calculated
- 4 per the OEB Cost of Capital Report.

5

6 Hydro Ottawa 30-year bonds are then forecast by adding the Hydro Ottawa historical credit

7 spread of 148 bps for 30-year bonds to the forecast 30-year Government of Canada yields.

8

9 The Hydro Ottawa historical credit spreads used for 10-year and 30-year bonds are as of

10 October 2019 and are based on the average Bank of Montreal ("BMO") Capital Markets

11 indicative spreads over the past two-and-a-half years for the Holding Company. Table 2

12 summarizes the forecasted Hydro Ottawa long-term debt rates for 10-year and 30-year debt

13 issuances for 2021-2025.

14

15

Table 2 – Forecast Yield for Long-Term Debt Issuances (2021-2025)

Year	Govt. of Canada 10-Year Yield (based on October 2019 Consensus Forecast) ³	Hydro Ottawa Historical 10-Year Spread	Forecast Hydro Ottawa Yield 10-Year Bonds	Historical Spread (30-Year Govt. Yield over 10-Year Govt. Yield)	Govt. of Canada 30-Year Yield	Hydro Ottawa Historical 30-Year Spread	Forecast Hydro Ottawa Yield 30-Year Bonds
2021	1.95%	112 bps	3.07%	44 bps	2.39%	148 bps	3.87%
2022	2.45%	112 bps	3.57%	44 bps	2.89%	148 bps	4.37%
2023	2.80%	112 bps	3.92%	44 bps	3.24%	148 bps	4.72%
2024	3.00%	112 bps	4.12%	44 bps	3.44%	148 bps	4.92%
2025	3.10%	112 bps	4.22%	44 bps	3.54%	148 bps	5.02%

16

17 Hydro Ottawa has used the forecasted weighted average long-term debt rates for calculating

18 the revenue requirement for 2021-2025, as shown in Table 3 below.

¹⁹ This is the average percentage for mid-year issuance.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 8 of 10

Table 3 – Forecast Weighted Average Long-Term Debt Rate

Year	Rate
2021	3.35%
2022	3.36%
2023	3.40%
2024	3.44%
2025	3.69%

2

1

3 The weighted average long-term debt rate reflects the Hydro Ottawa historical and prospective

allocation of debt issuances between 10-year and 30-year tenures of 35% and 65%,

5 respectively.

6

7 Attachment 5-1-1(B): Appendix 2-OB - Debt Instruments outlines the amounts and associated

8 interest rates for all of the utility's long-term debt instruments as well as the weighted average

9 long-term debt rate for the Historical, Bridge, and Test Years.

10

11 4. RETURN ON EQUITY

12 Hydro Ottawa has used a forecast ROE for the full five-year period covered by this Application.

13 This is in line with the guidance set forth in the Handbook for Utility Rate Applications, which

14 states that "the OEB expects there to be no further rate applications for annual updates within

15 the five-year term" and "the OEB does not expect to address annual rate applications for

16 updates for cost of capital." Hydro Ottawa has followed this guidance and has proposed an

17 ROE that balances Hydro Ottawa's expectation of a reasonable return with customers' needs

18 for investment in the system, while providing regulatory efficiency. Hydro Ottawa has utilized the

19 OEB's formulaic calculation in determining the forward-looking ROE.

^{. .}

²⁰ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 26.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 9 of 10

1 The ROE calculation utilizes three components:

2

3

- The Consensus Forecast Government of Canada 10-year bond yield;
- The 30-year to 10-year Government of Canada bond yield spread; and
- Change in A-rated Utility Bond Yield Spread from September 2009.

6

- 7 The ROE calculation in the model utilizes Consensus Forecast forward-looking rates for 10-year
- 8 bonds on a three-month and 12-month basis. To forecast the ROE over the five-year period of
- 9 2021-2025, the October 2019 Consensus Long-Term Forecast was utilized using the average
- 10 annual yield for 10-year bonds.

11

- 12 Similar to long-term debt, the 30-year Government of Canada bond yield is then calculated
- 13 using the forecast 10-year bond yield plus 44 bps, which is the five-year historical average
- 14 spread of the 30-year over 10-year Government of Canada bond yield as calculated per the
- 15 OEB Cost of Capital Report.

16

- 17 To determine the change in A-rated 30-year Utility Bond Yield spreads, the five-year historical
- 18 average spread as utilized in the Cost of Capital calculations up to October 2019 was used. This
- 19 five-year historical average equals 154 bps.

- 21 The calculations for the ROE forecast using the three components for the OEB's formulaic
- 22 calculation for ROE are shown in Table 4 below.

Hydro Ottawa Limited EB-2019-0261 Exhibit 5 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 10 of 10

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 1 of 15

UPDATED CALCULATION OF REVENUE DEFICIENCY OR SUFFICIENCY

2

3 1. INTRODUCTION

This Schedule provides a summary of the revenue requirement being requested by Hydro Ottawa for 2021-2025 in order to continue delivering electricity safely and reliably. The utility's total Service Revenue Requirement is offset by revenues obtained by sources other than distribution rates (i.e. other revenue). The calculation of the revenue deficiency/sufficiency does not include the recovery of deferral and variance accounts, as outlined in UPDATED Exhibit 9-3-1: Disposition of Deferral and Variance Accounts, or Low Voltage Charges as outlined in Exhibit 8-8-1: Low Voltage Service Rates. As directed in the *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and July 15, 2019, costs and revenues related to the cost of power are kept separate from the determination of the distribution revenue sufficiency/deficiency.

14

15 2. CALCULATION OF DEFICIENCY OR SUFFICIENCY

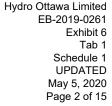

16 The revenue deficiency/sufficiency for 2021-2025 was calculated using the following inputs:

1718

19

- 2020 proposed approved rates; and
- 2021-2025 load forecast and forecast of customers and connections, as developed using the methodology described in UPDATED Exhibit 3-1-1: Load Forecast.

- The revenue deficiency/sufficiency was then determined by calculating what the revenue would
- have been with 2020 rates and the forecasted 2021-2025 load and customer numbers. As a
- result, revenue deficiency in the tables of this Schedule and Revenue Requirement Workforms produce a cumulative revenue requirement rather than a year-over-year revenue requirement.
- 26 Hydro Ottawa compiled the analysis in this matter, as the 2020 rates give a stable base upon
- 27 which to compare each year.

1 2.1. REVENUE DEFICIENCY/SUFFICIENCY 2016-2020

2 Table 1 outlines the revenue deficiency/sufficiency for 2016-2020 using the following inputs:

4 • 2015 approved rates;

5

8

9

10

- 2016-2020 approved load forecast and forecast of customers/connections; and
- 2016-2020 base revenue requirement, as per the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rate term, including the mid-term adjustments.¹

Table 1 – Approved Revenue Deficiency/Sufficiency for 2016-2020 with Mid-Term Adjustments (\$'000s)

	2016	2017	2018	2019	2020

Test Year 2021

Bridge Year

Last Rebasing Year 2016

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final ones at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Notes:

General

Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- (1) All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- (3) Net of addbacks and deductions to arrive at taxable income.
- (4) Average of Gross Fixed Assets at beginning and end of the Test Year
- (5) Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- 7) Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- 4.0% unless an Applicant has proposed or been approved for another amount.
- The default Working Capital Allowance factor is 7.5% (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.
- (10) Revenue at 2020 rates minus 2021 Transformer Ownership Allowance

Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in Appendix 2-I should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in Appendix 2-IB and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

⁽¹⁾ Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

Cost Allocation and Rate Design

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Application Update

A) Allocated Costs

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

⁽⁴⁾ In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment A UPDATED May 5, 2020 Page 12 of 16

⁽⁵⁾ Columns 7C and 7D - Column Total should equal the Base Revenue Requirement for each.

⁽⁶⁾ Column 7C - The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.

⁽⁷⁾ Column 7E - If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

C) Rebalancing Revenue-to-Cost Ratios

Name of Customer Class	Previously Approved Ratios	Status Quo Ratios	Proposed Ratios	Policy Range
	Most Recent Year:	(7C + 7E) / (7A)	(7D + 7E) / (7A)

⁽⁸⁾ Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment A UPDATED May 5, 2020 Page 13 of 16

⁽⁹⁾ Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

⁽¹⁰⁾ Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

(D) Proposed Revenue-to-Cost Ratios (11)

Name of Customer Class	Propos	ed Revenue-to-Cost Ratio		Policy Range

⁽¹¹⁾ The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2020 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2021 and 2022 Price Cap IR models, as necessary. For 2021 and 2022, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluentric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

Tracking Form

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

Test Year 2022

Bridge Year

Last Rebasing Year 2016

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final ones at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Notes:

in Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- (1) All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- Net of addbacks and deductions to arrive at taxable income.
- Average of Gross Fixed Assets at beginning and end of the Test Year
- (5) Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- (7) Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- 4.0% unless an Applicant has proposed or been approved for another amount.
- (9) The default Working Capital Allowance factor is 7.5% (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

Revenue Requirement Workform (RRWF) for 2020 Filers

Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-Is** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

kW/kVA (1)

Annual

6,818,165

1,517,223

1,050,767

58,863

7,440

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

Stage in Process:

App	lication	Update

Notes:

⁽¹⁾ Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

Cost Allocation and Rate Design

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Application Update

A) Allocated Costs

Name of Customer Class (3)		Allocated from vious Study (1)	%	-	Allocated Class enue Requirement	%
From Sheet 10. Load Forecast					(7A)

Total	\$	200,544,060	Service Revenue Requirement (from Sheet 9)	\$ \$	231,112,510	100.00%

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

Total	\$ 207,708,077	\$ 220,141,726	\$	220,109,877	\$	10,970,785

- (4) In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.
- (5) Columns 7C and 7D Column Total should equal the Base Revenue Requirement for each.
- (6) Column 7C The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.
- (7) Column 7E If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment B UPDATED May 5, 2020 Page 12 of 17

C) Rebalancing Revenue-to-Cost Ratios

Name of Customer Class	Previously Approved Ratios	Status Quo Ratios	Proposed Ratios	Policy Range
	Most Recent Year:	(7C + 7E) / (7A)	(7D + 7E) / (7A)	
	2016			
	%	%	%	%
Residential	104.29%	103.95%	103.94%	85 - 115
GS < 50 kW	118.23%	119.93%	119.83%	80 - 120
GS > 50 to 1,499 kW	86.34%	85.57%	85.57%	80 - 120
GS > 1,500 to 4,999 kW	98.24%	97.77%	97.77%	80 - 120
Large Use	85.36%	85.45%	85.45%	85 - 115
Street Lighting	80.00%	119.96%	119.91%	80 - 120
Sentinel Lighting	76.00%	59.63%	64.72%	80 - 120
Unmetered Scattered Load	118.72%	111.92%	111.96%	80 - 120
Standby Power	21.03%	156.34%	156.34%	80 - 120

⁽⁸⁾ Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment B UPDATED May 5, 2020 Page 13 of 17

⁽⁹⁾ Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

⁽¹⁰⁾ Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

(D) Proposed Revenue-to-Cost Ratios (11)

Name of Customer Class	Propose	ed Revenue-to-Cost Ratio		Policy Range	
	Test Year Price Cap IR Period			, ,	
	2021	2022	2023		
Residential	103.94%	103.94%	103.94%	85 - 115	
GS < 50 kW	119.83%	119.83%	119.83%	80 - 120	
GS > 50 to 1,499 kW	85.57%	85.57%	85.57%	80 - 120	
GS > 1,500 to 4,999 kW	97.77%	97.77%	97.77%	80 - 120	
Large Use	85.45%	85.45%	85.45%	85 - 115	
Street Lighting	119.91%	119.91%	119.91%	80 - 120	
Sentinel Lighting	64.72%	64.72%	64.72%	80 - 120	
Unmetered Scattered Load	111.96%	111.96%	111.96%	80 - 120	
Standby Power	156.34%	156.34%	156.34%	80 - 120	

⁽¹¹⁾ The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2020 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2021 and 2022 Price Cap IR models, as necessary. For 2021 and 2022, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment B UPDATED May 5, 2020 Page 14 of 17

New Rate Design Policy For Residential Customers

Please complete the following tables.

A Data Inputs (from Sheet 10. Load Forecast)

Test Year Billing Determinants for Residential Class								
Customers		319,386						
kWh		2,273,821,000						
Proposed Residential Class Specific Revenue	\$	124,445,561.04						
Requirement ¹								
Residential Base Rates on Curr	rent Ta	riff						
Monthly Fixed Charge (\$)	\$	32.47						
Distribution Volumetric Rate (\$/kWh)	\$	-						

B Current Fixed/Variable Split

	Base Rates	Billing Determinants	Revenue	% of Total Revenue
Fixed	32.47	319,386	\$ 124,445,561.04	100.00%
Variable	0	2,273,821,000	\$ -	0.00%
TOTAL	-	=	\$ 124,445,561.04	-

C Calculating Test Year Base Rates

Number of Remaining Rate Design Policy	_
Transition Years ²	0

	Test Year Revenue @ Current F/V Split		Test Year Base Rates @ Current F/V Split		Reconciliation - Test Year Base Rates @ Current F/V Split
Fixed	\$	124,445,561.04	32.47	\$	124,445,561.04
Variable	\$	-	0	\$	-
TOTAL	\$	124,445,561.04	-	\$	124,445,561.04

Fixed				
Variable				
TOTAL	-	\$ -	-	

Checks ³							
Change in Fixed Rate							
Difference Between Revenues @ Proposed Rates							
and Class Specific Revenue Requirement							

Notes

- 1 The final residential class specific revenue requirement, excluding allocated Miscellaneous Revenues, as shown on Sheet 11. Cost Allocation, should be used (i.e. the revenue requirement after any proposed adjustments to R/C ratios).
- The distributor should enter the number of years remaining before the transition to fully fixed rates is completed. The change in residential rate design is almost complete and distributors should have either 0 or 1 year remaining. If the distributor has fully transitioned to fixed rates put "0" in cell D40. If the distributor has proposed an additional transition year because the change in the residential rate design will result in the fixed charge increasing by more than \$4\particle{4}/year, put "1" in cell D40.
- 3 Change in fixed rate due to rate design policy should be less than \$4. The difference between the proposed class revenue requirement and the revenue at calculated base rates should be minimal (i.e. should be reasonably considered as a rounding error)

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1

Attachment B

May 5, 2020 Page 16 of 17

UPDATED

Revenue Requirement-Workform (RRWF) for 2020 Filers

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluentric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

Customer and Load Forecast Customer and Load Forecast Customer / Customer / Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Determinant Connections Charge Connections Charge Connections Connections Charge Connections Connections Charge Connections Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Connections Charge Cha	Distribution		Dis	stribution Rate	ates			Revenue Reconciliati	on

							Total Distribution R		##########
Rattes:	Rate			Rates recov	over revenue re	equirement	Base Revenue Requi	uirement	-\$ 31.877.

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment B UPDATED May 5, 2020 Page 17 of 17

Tracking Form

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

(2) Short description of change, issue, etc.

Summary of Proposed Changes

Test Year 2023

Bridge Year

Last Rebasing Year 2016

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final ones at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

General Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- (2) Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- Net of addbacks and deductions to arrive at taxable income
- Average of Gross Fixed Assets at beginning and end of the Test Year
- Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- 4.0% unless an Applicant has proposed or been approved for another amount.

 The default Working Capital Allowance factor is 7.5% (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

Revenue Requirement Workform (RRWF) for 2020 Filers

Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-Is** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

Stage in Process:

Application Update

Notes

⁽¹⁾ Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

Cost Allocation and Rate Design

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Application Update

A) Allocated Costs

Name of Customer Class (3)	 s Allocated from evious Study (1)	%	Allocated Class Revenue Requirement		%
From Sheet 10. Load Forecast				(1) (7A)

Total	\$ 200,544,060	100.00%	\$	244,558,304	100.00%
		Service Revenue Requirement (from Sheet 9)	\$	244,558,303.73	

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

Total	\$ 222,206,007	\$ 232,891,061	\$	232,910,273	\$	11,667,243

- (4) In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.
- (5) Columns 7C and 7D Column Total should equal the Base Revenue Requirement for each.
- (6) Column 7C The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.
- (7) Column 7E If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 12 of 17

C) Rebalancing Revenue-to-Cost Ratios

⁽⁸⁾ Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 13 of 17

⁽⁹⁾ Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

⁽¹⁰⁾ Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

(D) Proposed Revenue-to-Cost Ratios (11)

Name of Customer Class	Propos	Proposed Revenue-to-Cost Ratio					
	Test Year	Price Cap IR P	eriod	, ,			
	2021	2022	2023				
Residential	103.95%	103.95%	103.95%	85 - 115			
GS < 50 kW	119.96%	119.96%	119.96%	80 - 120			
GS > 50 to 1,499 kW	85.58%	85.58%	85.58%	80 - 120			
GS > 1,500 to 4,999 kW	97.79%	97.79%	97.79%	80 - 120			
Large Use	85.47%	85.47%	85.47%	85 - 115			
Street Lighting	119.88%	119.88%	119.88%	80 - 120			
Sentinel Lighting	69.82%	69.82%	69.82%	80 - 120			
Unmetered Scattered Load	111.89%	111.89%	111.89%	80 - 120			
Standby Power	156.36%	156.36%	156.36%	80 - 120			

⁽¹¹⁾ The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2020 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2021 and 2022 Price Cap IR models, as necessary. For 2021 and 2022, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

TOTAL	•	\$ -	i	

Checks ³							
Change in Fixed Rate							
Difference Between Revenues @ Proposed Rates							
and Class Specific Revenue Requirement							

Notes

- 1 The final residential class specific revenue requirement, excluding allocated Miscellaneous Revenues, as shown on Sheet 11. Cost Allocation, should be used (i.e. the revenue requirement after any proposed adjustments to R/C ratios).
- The distributor should enter the number of years remaining before the transition to fully fixed rates is completed. The change in residential rate design is almost complete and distributors should have either 0 or 1 year remaining. If the distributor has fully transitioned to fixed rates put "0" in cell D40. If the distributor has proposed an additional transition year because the change in the residential rate design will result in the fixed charge increasing by more than \$4\particle{4}/year, put "1" in cell D40.
- 3 Change in fixed rate due to rate design policy should be less than \$4. The difference between the proposed class revenue requirement and the revenue at calculated base rates should be minimal (i.e. should be reasonably considered as a rounding error)

Ontario Energy Board

Revenue Requirement-Workform (RRWF) for 2020 Filers

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment C **UPDATED** May 5, 2020 Page 16 of 17

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluentric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

							T	otal Transformer Ow	nership Allowance	\$ 1,056,029			Rates recover rev	enue requirement	Total Distribution Re		*************
Notes: 1 Transformer Ownership Allowance is	entered as a positive a	amount, and only fo	r those classes to wh	ich it applies.									1465 15000 101	ondo requitations	Difference % Difference		\$ 19,212.69 0.008%

Transformer Ownership Allowance is entered as a positive amount, and only for those classes to which it applies

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 17 of 17

Tracking Form

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

(2) Short description of change, issue, etc.

Test Year 2024

Bridge Year

Last Rebasing Year 2016

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final ones at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Notes:

General

Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- (1) All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- (3) Net of addbacks and deductions to arrive at taxable income.
- (4) Average of Gross Fixed Assets at beginning and end of the Test Year
- (5) Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- (6) Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- 7) Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- (8) 4.0% unless an Applicant has proposed or been approved for another amount.
- (9) The default Working Capital Allowance factor is 7.5% (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

Revenue Requirement Workform (RRWF) for 2020 Filers

Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-Is** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

Stage in Process:

Application Update

Notes

⁽¹⁾ Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

Cost Allocation and Rate Design

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Application Update

A) Allocated Costs

Name of Customer Class (3)	 s Allocated from vious Study (1)	%	-	Allocated Class enue Requirement	%
From Sheet 10. Load Forecast				(1) (7A)

Total	\$ 200,544,060	100.00%	\$	253,968,818	100.00%
		Service Revenue Requirement (from Sheet 9)	\$	253,968,818.71	

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

- (4) In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.
- (5) Columns 7C and 7D Column Total should equal the Base Revenue Requirement for each.
- (6) Column 7C The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.
- (7) Column 7E If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment D UPDATED May 5, 2020 Page 12 of 17

C) Rebalancing Revenue-to-Cost Ratios

Name of Customer Class	Previously Approved Ratios	Status Quo Ratios	Proposed Ratios	Policy Range
	Most Recent Year:	(7C + 7E) / (7A)	(7D + 7E) / (7A)	
	2016			
	%	%	%	%
Residential	104.29%	103.94%	103.94%	85 - 115
GS < 50 kW	118.23%	119.95%	119.92%	80 - 120
GS > 50 to 1,499 kW	86.34%	85.57%	85.57%	80 - 120
GS > 1,500 to 4,999 kW	98.24%	97.78%	97.78%	80 - 120
Large Use	85.36%	85.46%	85.46%	85 - 115
Street Lighting	80.00%	119.87%	119.82%	80 - 120
Sentinel Lighting	76.00%	69.81%	74.91%	80 - 120

Standby Power	21.03%	156.35%	156.35%	80 - 120
•				

⁽⁸⁾ Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment D UPDATED May 5, 2020 Page 13 of 17

⁽⁹⁾ Status Quo Ratios - The OEB-issued cost allocation model provides the Status Quo Ratios on Worksheet O-1. The Status Quo means "Before Rebalancing".

⁽¹⁰⁾ Ratios shown in red are outside of the allowed range. Applies to both Tables C and D.

(D) Proposed Revenue-to-Cost Ratios (11)

Name of Customer Class	Propos	Proposed Revenue-to-Cost Ratio							
	Test Year	Price Cap IR F	Period	Policy Range					
	2021	2022	2023						
Residential	103.94%	103.94%	103.94%	85 - 115					
GS < 50 kW	119.92%	119.92%	119.92%	80 - 120					
GS > 50 to 1,499 kW	85.57%	85.57%	85.57%	80 - 120					
GS > 1,500 to 4,999 kW	97.78%	97.78%	97.78%	80 - 120					
Large Use	85.46%	85.46%	85.46%	85 - 115					
Street Lighting	119.82%	119.82%	119.82%	80 - 120					
Sentinel Lighting	74.91%	74.91%	74.91%	80 - 120					
Unmetered Scattered Load	111.85%	111.85%	111.85%	80 - 120					
Standby Power	156.35%	156.35%	156.35%	80 - 120					

⁽¹¹⁾ The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2020 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2021 and 2022 Price Cap IR models, as necessary. For 2021 and 2022, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment D UPDATED May 5, 2020 Page 14 of 17

New Rate Design Policy For Residential Customers

Please complete the following tables.

A Data Inputs (from Sheet 10. Load Forecast)

Test Year Billing Determinants for R	esident	ial Class
Customers		325,150
kWh		2,333,198,000
Proposed Residential Class Specific Revenue	\$	136,680,054.00

TOTAL	-	\$ -	-	

Checks ³	
Change in Fixed Rate	
Difference Between Revenues @ Proposed Rates	
and Class Specific Revenue Requirement	

Notes

- 1 The final residential class specific revenue requirement, excluding allocated Miscellaneous Revenues, as shown on Sheet 11. Cost Allocation, should be used (i.e. the revenue requirement after any proposed adjustments to R/C ratios).
- The distributor should enter the number of years remaining before the transition to fully fixed rates is completed. The change in residential rate design is almost complete and distributors should have either 0 or 1 year remaining. If the distributor has fully transitioned to fixed rates put "0" in cell D40. If the distributor has proposed an additional transition year because the change in the residential rate design will result in the fixed charge increasing by more than \$4\particle{4}/year, put "1" in cell D40.
- 3 Change in fixed rate due to rate design policy should be less than \$4. The difference between the proposed class revenue requirement and the revenue at calculated base rates should be minimal (i.e. should be reasonably considered as a rounding error)

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment D **UPDATED** May 5, 2020 Page 16 of 17

Revenue Requirement-Workform (RRWF) for 2020 Filers

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluentric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

Stage in Process:		,	Application Update		Cla	ss Allocated Rever	nues					Dist	ribution Rates		F	Revenue Reconciliation	on

							Т	otal Transformer Ow	nership Allowance	\$ 1,058,511			Rates recover re	venue requirement	Total Distribution Re		************
Notes: 1 Transformer Ownership Allowance is	entered as a positive a	amount, and only fo	r those classes to wh	nich it applies.											Difference % Difference		-\$ 11,060.62 -0.005%

Transformer Ownership Allowance is entered as a positive amount, and only for those classes to which it applies

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

Tracking Form

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

(2) Short description of change, issue, etc.

Test Year 2025

Bridge Year

Last Rebasing Year 2016

The RRWF has been enhanced commencing with 2017 rate applications to provide estimated base distribution rates. The enhanced RRWF is not intended to replace a utility's formal rate generator model which should continue to be the source of the proposed rates as well as the final onnes at the conclusion of the proceeding. The load forecasting addition made to this model is intended to be demonstrative only and does not replace the information filed in the utility's application. In an effort to minimize the incremental work required from utilities, the cost allocation and rate design additions to this model do in fact replace former appendices that were required to be filed as part of the cost of service (Chapter 2) filing requirements.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Notes:

General

Data inputs are required on Sheets 3. Data from Sheet 3 will automatically complete calculations on sheets 4 through 9 (Rate Base through Revenue Requirement). Sheets 4 through 9 do not require any inputs except for notes that the Applicant may wish to enter to support the results. Pale green cells are available on sheets 4 through 9 to enter both footnotes beside key cells and the related text for the notes at the bottom of each sheet.

- (1) All inputs are in dollars (\$) except where inputs are individually identified as percentages (%)
- Data in column E is for Application as originally filed. For updated revenue requirement as a result of interrogatory responses, technical or settlement conferences, etc., use column M and Adjustments in column I
- (3) Net of addbacks and deductions to arrive at taxable income.
- (4) Average of Gross Fixed Assets at beginning and end of the Test Year
- Average of Accumulated Depreciation at the beginning and end of the Test Year. Enter as a negative amount.
- (6) Select option from drop-down list by clicking on cell M12. This column allows for the application update reflecting the end of discovery or Argument-in-Chief. Also, the outcome of any Settlement Process can be reflected.
- [7] Input total revenue offsets for deriving the base revenue requirement from the service revenue requirement
- (8) 4.0% unless an Applicant has proposed or been approved for another amount.
- (9) The default Working Capital Allowance factor is 7.5% (of Cost of Power plus controllable expenses), per the letter issued by the Board on June 3, 2015. Alternatively, a WCA factor based on lead-lag study, with supporting rationale could be provided.

Revenue Requirement Workform (RRWF) for 2020 Filers

Load Forecast Summary

This spreadsheet provides a summary of the customer and load forecast on which the test year revenue requirement is derived. The amounts serve as the denominators for deriving the rates to recover the test year revenue requirement for purposes of this RRWF.

The information to be input is inclusive of any adjustments to kWh and kW to reflect the impacts of CDM programs up to and including CDM programs planned to be executed in the test year. i.e., the load forecast adjustments determined in **Appendix 2-Is** should be incorporated into the entries. The inputs should correspond with the summary of the Load Forecast for the Test Year in **Appendix 2-IB** and in Exhibit 3 of the application.

Appendix 2-IB is still required to be filled out, as it also provides a year-over-year variance analysis of demand growth andf trends from historical actuals to the Bridge and Test Year forecasts.

Stage in Process:

Application Update

Notes

⁽¹⁾ Input kW or kVA for those customer classes for which billing is based on demand (kW or kVA) versus energy consumption (kWh)

Cost Allocation and Rate Design

This spreadsheet replaces **Appendix 2-P** and provides a summary of the results from the Cost Allocation spreadsheet, and is used in the determination of the class revenue requirement and, hence, ultimately, the determination of rates from customers in all classes to recover the revenue requirement.

Stage in Application Process: Application Update

A) Allocated Costs

Name of Customer Class (3)	 s Allocated from vious Study (1)	%	-	Allocated Class enue Requirement	%
From Sheet 10. Load Forecast				(1) (7A)	
Residential	\$ 107,281,788	53.50%	\$	143,774,772	55.16%

		Service Revenue Requirement (from Sheet 9)	\$	260,674,040.72	

- (1) Class Allocated Revenue Requirement, from Sheet O-1, Revenue to Cost || RR, row 40, from the Cost Allocation Study in this application. This excludes costs in deferral and variance accounts. For Embedded Distributors, Account 4750 Low Voltage (LV) Costs are also excluded.
- (2) Host Distributors Provide information on any embedded distributor(s) as a separate class, if applicable. If embedded distributors are billed in a General Service class, include the allocated costs and revenues of the embedded distributor(s) in the applicable class, and also complete Appendix 2-Q.
- (3) Customer Classes If these differ from those in place in the previous cost allocation study, modify the customer classes to match the proposal in the current application as closely as possible.

Total	\$ 243,832,101	\$ 248,217,333	\$	248,184,089	\$	12,456,709	

- (4) In columns 7B to 7D, LF means Load Forecast of Annual Billing Quantities (i.e., customers or connections, as applicable X 12 months, and kWh, kW or kVA as applicable. Revenue quantities should be net of the Transformer Ownership Allowance for applicable customer classes. Exclude revenues from rate adders and rate riders.
- (5) Columns 7C and 7D Column Total should equal the Base Revenue Requirement for each.
- (6) Column 7C The OEB-issued cost allocation model calculates "1+d" on worksheet O-1, cell C22. "d" is defined as Revenue Deficiency/Revenue at Current Rates.
- (7) Column 7E If using the OEB-issued cost allocation model, enter Miscellaneous Revenues as it appears on worksheet O-1, row 19,

⁽⁸⁾ Previously Approved Revenue-to-Cost (R/C) Ratios - For most applicants, the most recent year would be the third year (at the latest) of the Price Cap IR period. For example, if the applicant, rebased in 2012 with further adjustments to move within the range over two years, the Most Recent Year would be 2015. However, the ratios in 2015 would be equal to those after the adjustment in 2014.

Sentinel Lighting	80.00%	80.00%	80.00%	80 - 120
Unmetered Scattered Load	111.91%	111.91%	111.91%	80 - 120
Standby Power	156.36%	156.36%	156.36%	80 - 120
-				

⁽¹¹⁾ The applicant should complete Table D if it is applying for approval of a revenue-to-cost ratio in 2020 that is outside of the OEB's policy range for any customer class. Table D will show that the distributor is likely to enter into the 2021 and 2022 Price Cap IR models, as necessary. For 2021 and 2022, enter the planned revenue-to-cost ratios that will be "Change" or "No Change" in 2019 (in the current Revenue/Cost Ratio Adjustment Workform, Worksheet C1.1 'Decision - Cost Revenue Adjustment, column d), and enter TBD for class(es) that will be entered as 'Rebalance'.

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment E UPDATED May 5, 2020 Page 15 of 18

New Rate Design Policy For Residential Customers

Checks ³									
Change in Fixed Rate									
Difference Between Revenues @ Proposed Rates									
and Class Specific Revenue Requirement									

Notes

- 1 The final residential class specific revenue requirement, excluding allocated Miscellaneous Revenues, as shown on Sheet 11. Cost Allocation, should be used (i.e. the revenue requirement after any proposed adjustments to R/C ratios).
- The distributor should enter the number of years remaining before the transition to fully fixed rates is completed. The change in residential rate design is almost complete and distributors should have either 0 or 1 year remaining. If the distributor has fully transitioned to fixed rates put "0" in cell D40. If the distributor has proposed an additional transition year because the change in the residential rate design will result in the fixed charge increasing by more than \$4\/\text{year, put "1" in cell D40.
- 3 Change in fixed rate due to rate design policy should be less than \$4. The difference between the proposed class revenue requirement and the revenue at calculated base rates should be minimal (i.e. should be reasonably considered as a rounding error)

Hydro Ottawa Limited EB-2019-0261 Exhibit 6 Tab 1 Schedule 1 Attachment E UPDATED May 5, 2020 Page 17 of 18

Rate Design and Revenue Reconciliation

This sheet replaces Appendix 2-V, and provides a simplified model for calculating the standard monthly and voluentric rates based on the allocated class revenues and fixed/variable split resulting from the cost allocation study and rate design and as proposed by the applicant. However, the RRWF does not replace the rate generator model that an applicant distributor may use in support of its application. The RRWF provides a demonstrative check on the derivation of the revenue requirement and on the proposed base distribution rates to recover the revenue requirement, based on summary information from a more detailed rate generator model and other models that applicants use for cost allocation, load forecasting, taxes/PILs, etc.

Notes: 1 Transformer Ownership Allowance is	entered as a positive a	amount, and only fo	r those classes to wh	nich it applies.									TALOS TODOVOI TO	oronae roquitement	Difference % Difference		-\$ 33,245.70 -0.013%																

Transformer Ownership Allowance is entered as a positive amount, and only for those classes to which it applies

The Fixed/Variable split, for each customer class, drives the "rate generator" portion of this sheet of the RRWF. Only the "fixed" fraction is entered, as the sum of the "fixed" and "variable" portions must sum to 100%. For a distributor that may set the Monthly Service Charge, the "fixed" ratio is calcutated as: [MSC x (average number of customers or connections) x 12 months] / (Class Allocated Revenue Requirement).

Tracking Form

The first row shown, labelled "Original Application", summarizes key statistics based on the data inputs into the RRWF. After the original application filing, the applicant provides key changes in capital and operating expenses, load forecasts, cost of capital, etc., as revised through the processing of the application. This could be due to revisions or responses to interrogatories. The last row shown is the most current estimate of the cost of service data reflecting the original application and any updates provided by the applicant distributor (for updated evidence, responses to interrogatories, undertakings, etc.)

Please ensure a Reference (Column B) and/or Item Description (Column C) is entered. Please note that unused rows will automatically be hidden and the PRINT AREA set when the PRINT BUTTON on Sheet 1 is activated.

(1) Short reference to evidence material (interrogatory response, undertaking, exhibit number, Board Decision, Code, Guideline, Report of the Board, etc.)

(2) Short description of change, issue, etc.

Summary of Proposed Changes

UPDATED COST ALLOCATION

2

1

1. INTRODUCTION

In accordance with section 2.7 of the Chapter 2 Filing Requirements for Electricity Distribution

- 5 Rate Applications, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing
- 6 Requirements"), this Schedule includes information on cost allocation study requirements,
- 7 class revenue requirements, and revenue-to-cost ratios.

8

2. COST ALLOCATION STUDY

10 Hydro Ottawa engaged Elenchus Research Associates ("Elenchus") to assist in completing a

11 Cost Allocation Study for the Test Year 2021 using the OEB-approved model. The updated

model incorporates impacts of 2019 actuals, including fixed asset, load, and demand data.

Operations, Maintenance and Administration costs and weighting factors have not been

⁴ updated. The completed updated model is appended to this Schedule as UPDATED

15 Attachment 7-1-1(A): OEB Workform - 2021 Cost Allocation Model. Elenchus has also provided

16 a report which describes the methodology and presents the original results of this model. The

17 report is included as Attachment 7-1-1(B): Hydro Ottawa Cost Allocation Report. It has not

been updated to include the impacts of 2019 actuals. In addition, Hydro Ottawa has included

19 PDF copies of the required pages from the completed updated version of the OEB Cost

20 Allocation Model.

2122

3. COST ALLOCATION FACTORS

23 3.1. WEIGHTING FACTORS

- 24 While most allocation factors are based on Test Year data, the allocation factors for secondary
- 25 service, meter reading, and meter capital are based on historical costs by customer class up to
- the end of fiscal year 2018, which at the time of Hydro Ottawa's original Application was the
- 27 utility's last audited year. 2019 is Hydro Ottawa's last audited year as of the filing of this
- 28 updated package of information for the Application.

Hydro Ottawa Limited EB-2019-0261 Exhibit 7 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 2 of 5

- For a detailed description of the methodology for development of allocation and load factors,
- 2 please refer to Attachment 7-1-1(B): Hydro Ottawa Cost Allocation Report. All allocation and
- 3 load factors, updated for 2019 actual results, have been incorporated into the OEB-approved
- 4 Cost Allocation Model included in this Application as **UPDATED** Attachment 7-1-1(A): OEB
- 5 Workform 2021 Cost Allocation Model.

6 7

3.2. LOAD PROFILES

- 8 Hydro Ottawa was unable to obtain the hourly load profile data required to derive updated load
- 9 profiles for this Application. As a result, demand data figures for the 2021 Cost Allocation
- 10 Model have been calculated based on hourly demand figures used in previous rate
- 11 applications, adjusted to the 2021 monthly load profile and customer count forecasts. Please
- refer to Attachment 7-1-1(B): Hydro Ottawa Cost Allocation Report and UPDATED Attachment
- 13 7-1-1(C): 2021 Demand Factors Calculation for a detailed description and example of the
- 14 calculation of load profile and demand data used in the Cost Allocation Model.

15

- Hydro Ottawa confirms that it has a plan in place to develop updated hourly load profiles to
- 17 comply with the current Filing Requirements.

18

19

4. COST ALLOCATION ADJUSTMENTS

- 20 The Cost Allocation Model indicated that four rate classes require adjustments to bring them
- 21 within the OEB- approved ranges: General Service ("GS") <50 kW and Street Lighting were
- 22 above the upper limit, while Large Use and Sentinel Lighting were below the lower limit.

- 24 Hydro Ottawa proposes to adjust the revenue requirements to bring three of the four rate
- 25 classes into the OEB-approved ranges in 2021. Hydro Ottawa first reallocated revenue
- 26 requirement within the affected rates classes. The remaining revenue shortfall resulting from
- 27 these adjustments was allocated to the GS 50 to 1,499 kW, GS 1,500 to 4,999 kW, and Large
- 28 Use customer classes that have revenue-to-cost ratios below 100.

Hydro Ottawa Limited EB-2019-0261 Exhibit 7 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 3 of 5

It is proposed to bring the Sentinel Lighting rate class up to the lower bound over a five-year period, in order to mitigate the large bill impact of an immediate adjustment. Required adjustments to Sentinel Lighting in the 2022-2025 Test Years are offset against another unmetered customer class, Street Lighting. The impact on the Street Lighting class will be minimal, at less than \$600 annually.

6

7 The 2021 adjustments are fully described in Attachment 7-1-1(B): Hydro Ottawa Cost 8 Allocation Report and evidenced within Sheet 11: Cost_Allocation in the following workforms:

Exhibit 7
Tab 1
Schedule 1
UPDATED
May 5, 2020
Page 5 of 5

1 5. STANDBY RATES

2 5.1. LOAD DISPLACEMENT STANDBY

- 3 Standby rates are being examined as part of the OEB's consultation on Commercial and
- 4 Industrial Rate Design ("C&I Rate Design"), with the potential implementation of a Capacity
- 5 Reserve Charge to replace Standby Charges.³ As a result, Hydro Ottawa is not seeking
- 6 Standby Rates on a final basis as part of this Application.

7

- 8 Once a final OEB report and policy change related to C&I Rate Design is released and
- 9 electricity distributors understand the resulting impact on Standby Charges, Hydro Ottawa will
- 10 determine next steps in requesting Standby rates on a final basis.

11

12 5.2. RELIABILITY STANDBY

- 13 Upon issuance of the final report for C&I Rate Design, Hydro Ottawa will review the treatment of
- 14 Standby Rates relating to reliability. Seeing as Hydro Ottawa's intended rate design was linked
- 15 to the current Standby rate design for load displacement (as initially proposed in the utility's
- 16 2017 rate adjustment application⁴), Hydro Ottawa believes it would be prudent at this time for
- 17 the policy change related to C&I Rate Design to be completed prior to the utility seeking to
- 18 introduce new rates to customers that may be addressed in that consultation generically.

19

- 20 If Hydro Ottawa is unable to recover the costs associated with additional reliability as a result of
- 21 the outcomes emerging from the OEB's consultation on C&I Rate Design, a separate
- 22 application relating to Standby Reliability charges will be filed.

Sheet I2 Class Selection -**UPDATED 2021-2025 Custom IR -:**

Instructions:
Step 1: Please input identification of this Run in C15 and C17

Step 2: Please input your proposed rate classes.

Step 3: After all classes have been entered, Click the "Update" button in cell E41

Please input the date on which this Run of the model was prepared or submitted

Please provide summary identification of this Run

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 1 of 9

UPDATED FIXED / VARIABLE PROPORTION

2

1

3 1. INTRODUCTION

- 4 This Schedule explains how Hydro Ottawa's proposed rates have been designed to collect the
- 5 requested revenue requirement from 2021-2025. The current 2020 and proposed 2021-2025 Bill
- 6 Impacts and Tariffs of Rates and Charges are provided in **UPDATED** Exhibit 8-12-1: Bill Impact
- 7 Information.

8

- Hydro Ottawa is requesting approval of a Base Revenue Requirement in 2021 of \$203.9M and
- 10 Transformer Ownership Credit of \$1.06M for total revenue from distribution rates of \$204.9M.
- 11 After accounting for 2019 actuals, the utility is requesting approval of a Base Revenue
- 12 Requirement in 2021 of \$205.6M and Transformer Ownership Credit of \$1.06M for total revenue
- 13 from distribution rates of \$206.7M. The updated version of Table 1 summarizes the requested
- 14 revenue from distribution rates for the 2021-2025 rate period.

1516

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 2 of 9

- 1 Please see **UPDATED** Exhibit 6-1-1: Calculation of Revenue Deficiency or Sufficiency for the
- 2 calculation of revenue required from distribution rates and of revenue deficiency.

3

4 2. FIXED/VARIABLE PROPORTION

- 5 Hydro Ottawa has determined the distribution fixed/variable split and charges for each rate
- 6 class. The updated version of Table 2 below provides the current and proposed fixed/variable
- 7 split. The updated versions of Tables 3 through 5 below provide the current and proposed
- 8 fixed/variable charges.

3

1

- 4 As of 2020, the Residential customer class is 100% fixed. This percentage will be held constant
- 5 for the duration of the 2021-2025 rate period. For all other classes, Hydro Ottawa's proposed
- 6 rate design is based on maintaining the fixed/variable split.

7

- 8 For customer classes where the 2020 fixed charge is higher than the calculated upper bound,
- 9 Hydro Ottawa proposes to maintain the current fixed charge for 2021. As a result, this adjusts
- 10 the variable charges for these classes to recover the proposed class-level revenue requirement
- in 2021. Specifically, these classes are the following: GS 50 to 1,499 kW; GS 1,500 to 4,999
- 12 kW; Large Use; and Standby Power. Starting in 2022, Hydro Ottawa proposes to maintain the
- 13 fixed/variable split in recovering revenue requirement. As a result, the fixed charge increases
- 14 after 2021.

- 16 The rate design is such that if the following year's percentage of revenue requirement from the
- 17 fixed charge being maintained would result in a lower fixed charge, then the previous year's
- 18 fixed charge is maintained. As a result, the proposed fixed charge for the Large Use customer

Hydro Ottawa Limited
EB-2019-0261
Exhibit 8
Tab 1
Schedule 1
UPDATED
May 5, 2020
Page 9 of 9

1 class has been held constant for the years 2023-2025 and the fixed charge for GS 1,500 to

2 4,999 kW has been held constant in 2024-2025.

3

4 3. TRANSFORMER OWNERSHIP CREDIT

5 Hydro Ottawa is proposing to maintain the current Transformer Ownership Credit ("TOC") of

6 \$0.45/kW for customers who own their transformers until November 1, 2025.

7

8 As per section 2.5.5.4 of Hydro Ottawa's Conditions of Service ("COS") - Version 7, the TOC will

be discontinued for all customer-owned transformers as of November 1, 2025.3 In the 2015

10 update of the COS - Version 5, Hydro Ottawa notified customers of plans to discontinue the

11 TOC. Therefore, the utility requests that, effective November 1, 2025, no TOC will be extended

12 to customers with customer-owned transformers.

13

14 Effective April 1, 2015, customers with customer-owned transformers installed after November

15 1, 2000 were no longer eligible to receive the credit. The TOC will be discontinued for

16 customers who own transformers that were installed prior to November 1, 2000 either when the

17 customer-owned transformer has been replaced, or after November 1, 2025 – whichever occurs

18 first. As noted in the COS, with customers there will be no reconciliation of any debits or credits

19 with the previous TOCs.

²⁰ Hydro Ottawa Limited, *Conditions of Service*, Version 7 (April 1, 2019), Section 2.5.5.4, pages 55-56.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 1 of 11

UPDATED SPECIFIC SERVICE CHARGES

2

1

3 1. INTRODUCTION

4 Service charges apply to services that are over and above Hydro Ottawa's standard level of 5 service offerings and may result from a customer's action or inaction. The revenue from these 6 charges offset the total revenue requirement. Retail Services Charges are discussed in detail 7 within Exhibit 8-4-1: Retail Service Charges.

8

9 During 2019, Hydro Ottawa undertook a review of many routine service charges to ensure they 10 reflected the associated costs of providing services. Hydro Ottawa assessed certain repeated 11 requests by a small number of customers which result in resources being expended by the 12 utility. Service charges are proposed for such requests to encourage efficient use of Hydro 13 Ottawa's resources.

14

As part of this Application, Hydro Ottawa is proposing to revise some previously established service charges, introduce an additional service charge, eliminate one existing service charge, and rename certain service charges to more accurately reflect the services provided. Unless otherwise indicated, the proposed rate changes and additions shall be adjusted for the years 2022-2025 by an escalation rate of 2.51%, consistent with the escalation rate applied to Hydro Ottawa's 2022-2025 operations, maintenance and administration ("OM&A") expenses and the majority of its other revenue rates. For more details regarding this escalation factor, please see UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework.

23

24 2. SUMMARY OF PROPOSED REVISED AND NEW SPECIFIC SERVICE CHARGES

Table 1 below summarizes the approved 2020 specific service charges ("SSCs") and the proposed revised and new SSCs, respectively, for the years 2021-2025. All of the proposed SSCs are to be included in Hydro Ottawa's Tariff of Rates and Charges.

Specific Charge to Access Power Poles - Wireline	\$53.00	\$45.39	\$46.53	\$47.70	\$48.90	\$50.12
Drycore Transformer Charge	8-7-1 (B)	8-7-1 (B)	8-7-1 (B)	8-7-1 (B)	8-7-1 (B)	8-7-1 (B)
ERF Administration Charge Without Account Set Up ¹	\$138.00	\$142.00	\$146.00	\$150.00	\$153.00	\$157.00

¹ If a customer requires account set-up, they will also be charged the Account Set Up Charge.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 3 of 11

1 3. REVISED SERVICE CHARGES

2 Hydro Ottawa is proposing to revise a number of SSCs.

3

4 3.1. REMOVAL OF ACCOUNT CERTIFICATE

- 5 Formally included together as Account Certificate for the 2016-2020 period, Hydro Ottawa
- 6 proposes to separate out the Easement Certificate for Unregistered Easements from the
- 7 Account Certificate Charge and rename the Account Certificate Charge to Arrears Certificate,
- 8 for the 2021-2025 period. These two services are distinctly different with the easement portion
- 9 being more labour-intensive and in higher demand. The separation will allow for pricing to better
- 10 reflect the associated cost of related services.

11

12 3.1.1. Arrears Certificate

- 13 For the Arrears Certificate service, Hydro Ottawa proposes to apply the standard provincial rate
- 14 for 2020 and make annual adjustments by the escalation increases starting in 2021 through
- 15 2025.

16

17 3.1.2 Easement Certificate for Unregistered Easements

- 18 For the Easement Certificate for Unregistered Easements service, a new rate of \$25 will be
- 19 introduced for 2021 and increased by the escalation increase through to 2025. The Easement
- 20 Certificate for Unregistered Easements service involves researching and presenting findings to
- 21 the customer. Typically this service varies in terms of resource effort and time. Accordingly, the
- 22 proposed charge is based upon Hydro Ottawa's work for others hourly labour rate extended by
- 23 an average time required to complete the request. This revised rate is reflective of the cost to
- 24 render this service. Services of this nature were historically combined with the Arrears
- 25 Certificate; however, the costs to Hydro Ottawa were not fully covered.

26

27 3.2. DUPLICATE INVOICES FOR PREVIOUS BILLING

- 28 Hydro Ottawa is proposing to reduce the current 2020 rate of \$15 to \$5 in 2021 and increase by
- 29 the escalation increases through to 2025. This is due to the availability of

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 4 of 11

1 electronically-formatted customer bills (from 2014 onwards) which enable duplicate bills to be

2 disseminated by email rather than external mail. This eliminates the need for printing and

3 postage, which is reflected in the reduced rate. Customers are also encouraged to use

4 MyAccount (the utility's online customer service portal) where they are able to view past bills at

5 no cost.

6

7 3.3. SPECIAL BILLING SERVICE

8 Special Billing Service (formerly Request for other Billing Information) was introduced as part of

9 the 2016-2020 rate application.² It was applied to all requests for customized billing information

that involves sourcing, compiling, and presenting several months or years of billing information

11 for customers or their agents. Hydro Ottawa is proposing a rate of \$122 in 2021 and to apply

2 annual adjustments by the escalation increases through to 2025. This rate reflects the labour

13 time involved in providing these services and associated labour rate.

14

15 3.4. UNPROCESSED PAYMENT CHARGE

16 To date, Hydro Ottawa has been using the standard 2006 Electricity Distribution Rate ("EDR")

17 Handbook rate. However, based on an internal costing exercise, a rate change is being

18 requested. Hydro Ottawa is proposing to increase the current 2020 rate of \$15 to \$25 in 2021 to

9 offset the internal costs of processing a non-sufficient funds ("NSF") payment, including fees

20 and labour, and to adjust by the escalation increases on an annual basis through to 2025.

21

22 3.5. ACCOUNT SET UP CHARGE

23 As part of the review of this service charge, it was determined that Hydro Ottawa is able to

4 reduce this rate. Hydro Ottawa is proposing to reduce the current 2020 rate of \$30 to \$25 in

25 2021 and increase by the escalation increases through to 2025. Labour savings reflected in the

26 new rate are driven by a streamlined customer move process which facilitates the ability to have

27 50% of move requests completed by the Contact Centre.

Hydro Ottawa Limited, 2016-2020 Custom Incentive Rate-Setting Distribution Rate Application, EB-2015-0004 (April 29, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 5 of 11

1 3.6. COLLECTION OF ACCOUNT CHARGE

2 The Collection of Account charge was removed July 1, 2019, in accordance with the

3 implementation of Phase 1 of the OEB's review of Customer Service Rules.3

4

5 3.7. RECONNECT AT METER AFTER REGULAR HOURS

6 As part of the review of this service charge, it was determined that due to changing technology

7 Hydro Ottawa is able to reduce this rate from \$185 in 2020 to \$100 in 2021. Using Honeywell

8 (formerly Elster) technology, Hydro Ottawa can now remotely reconnect some meters through

9 its Advanced Metering Infrastructure ("AMI") equipped with the EnergyAxis Management

10 System ("EA MS"). These meters are installed in hard-to-access locations and premises that

11 have high Move-In/Move-Out trends. The operational efficiencies, including the elimination of a

12 trip to a customer's premise to physically reconnect service, have resulted in labour and fleet

13 savings. These savings are reflected in the new rate.

14

15 3.8. RECONNECT AT POLE DURING REGULAR HOURS

To date, Hydro Ottawa has been using the standard 2006 EDR Handbook rate. However, based on an internal costing exercise an increase to \$250 is being requested. Hydro Ottawa is

18 proposing to increase the current 2020 rate of \$185 to \$250 in 2021 and adjust by the

9 escalation increases on an annual basis through to 2025. The rate increase is sought to recover

0 associated internal costs of labour and fleet. Reconnection at poles is more costly than at the

1 meter, as it requires two highly-qualified employees due to the complexity and safety risks of

22 pole work.

23

24 3.9. INTERVAL METER - FIELD READING

25 As part of its last rebasing application, Hydro Ottawa requested the Interval Meter Field Reading

26 Charge. As outlined in the utility's Conditions of Service, interval-metered customers are

27 responsible for providing a dedicated telephone line for remote meter data interrogation. Should

28 this dedicated telephone line become defective, the customer is responsible for arranging the

-

³ Ontario Energy Board, *Decision and Order*, EB-2017-0183 (September 6, 2018), page 49.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 6 of 11

1 necessary repairs within seven business days upon being notified by Hydro Ottawa. After this

2 timeframe, if the defect remains and requires Hydro Ottawa to visit the metering site to obtain a

3 scheduled reading, an interval meter field reading charge will apply to each related visit. This

4 charge is intended to promote timely telephone communication line repairs and, when

5 necessary, recover the costs associated with interval metering field readings due to unresolved

6 telephone line defects.

7

8 Hydro Ottawa has since partnered with a cellular carrier to provide a cellular modem that will

9 remove the need for interval meter phone lines in the future. As this initiative is being phased

10 in, Hydro Ottawa may, in the short term, still need to visit some interval-metered premises to

11 take a meter reading, when the phone lines are inoperable.

12

13 Hydro Ottawa is proposing to reduce the current 2020 rate of \$378 to \$314 in 2021. The main

14 driver of the reduced rate is alignment with the business process to provide a Hydro Ottawa

15 representative during the repair of the phone line without charge. This visit would occur whether

16 the repair occurred in a timely manner or not. As such, the utility no longer proposes to include

7 the cost of this visit in the Interval Meter Field Reading charge.

18

19 3.10. SPECIFIC ACCESS TO POWER POLES - WIRELINE ATTACHMENTS

20 Hydro Ottawa currently charges 11 telecommunications companies, two municipalities, and one

21 local distribution company ("LDC") for third-party pole attachments. The current Hydro

22 Ottawa-specific pole attachment rate of \$53.00 per attachment per pole was approved by the

23 OEB on February 26, 2016, with no adjustment for inflation for 2016-2020.4 Effective January 1,

24 2021, Hydro Ottawa proposes to use the OEB generic rate.

25

26 The OEB's standard rate of \$43.63 per attachment per pole was established as OEB policy in

27 2018, with an effective date of January 1, 2019.5 In its policy decision, the OEB concluded that

⁴ Ontario Energy Board, *Decision and Rate Order on Pole Attachment Charge*, EB-2015-0004 (February 25, 2016), page 1.

⁵ Ontario Energy Board, *Report of the Ontario Energy Board - Wireline Pole Attachment Charges*, EB-2015-0304 (March 22, 2018), page 51.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 7 of 11

- 1 the rate will be adjusted annually on January 1st of each year based on the OEB's inflation
- 2 factor. For LDCs with third-party power attachments on Hydro Ottawa-owned poles, the current
- 3 OEB-approved Hydro One Networks Inc. Specific Charge for LDCs Access to Power Poles
- 4 rates will be charged.6

5

- 6 For the purpose of calculating revenue requirement, Hydro Ottawa has used the OEB-approved
- 7 2020 inflation factor of 2.0% to adjust the 2020 generic rate for 2021.7 For 2022-2025 rates,
- 8 Hydro Ottawa increased the calculated 2021 rate using the escalation rate of 2.51%, consistent
- 9 with the escalation rate applied to Hydro Ottawa's 2022-2025 OM&A expenses and the majority
- 10 of other revenue rates as part of this Application. For more details regarding this escalation
- 11 factor, please see **UPDATED** Exhibit 1-1-10: Alignment with the Renewed Regulatory
- 12 Framework.

13

14 3.11. DRY CORE TRANSFORMER CHARGE

- 15 The dry core transformer charge is applied to recover unmetered energy lost in the operation of
- 16 a dry core transformer. A specific charge is calculated for each transformer based on the
- 17 Canadian Standards Association standard C802-94 ("CSA-C802-94").8 For transformer sizes
- 18 not included in CSA-C802-94, there are no load losses, load losses, or associated costs that are
- 19 interpolated based on the transformer size. Hydro Ottawa is proposing to calculate the dry core
- 20 transformer loss charge for any new size of transformer upon connection, based on the dry core
- 21 rate design.

- 23 For 2021-2025, Hydro Ottawa has included rates for new sizes of transformers that are currently
- in the utility's service area, as well as sizes in CSA-C802-94 that were not previously included.
- 25 These rates are outlined in <mark>UPDATED</mark> Attachment 8-7-1(B): Dry Core Calculations. The rates
- 26 have been set based on the proposed 2021-2025 distribution rates of the >50kW commercial

⁶ Ontario Energy Board, *Decision and Order*, EB-2019-0043 (December 17,2019) Schedule A, page 15.

1 classes, as well as the forecasted Regulated Price Plan ("RPP"), transmission, low voltage, and

2 regulatory rates.

3

- 4 Hydro Ottawa is proposing to adjust these rates on an annual basis to reflect any changes in the
- 5 distribution, RPP, and transmission rates. In addition, Regulatory rates will be updated as per
- 6 any applicable OEB Decision and/or Order.

7

3 4. REVISED GENERATOR CHARGES & STANDARD SUPPLY SERVICE CHARGES

9 4.1. GENERATOR FIXED SERVICE CHARGES

10 Hydro Ottawa is proposing to revise the MicroFIT, Net Metering, FIT, and HCI/RESOP/HESOP

- 11 charges as part of this Application. The revised charges reflect a reassessment of the costs
- 12 associated with managing these accounts on a monthly basis. Hydro Ottawa further proposes
- 13 that the proposed 2021 charges be scaled annually by 2.51% for 2022-2025. As noted above,
- 14 the 2.51% is consistent with the escalation rate applied to Hydro Ottawa's 2022-2025 OM&A
- 15 expenses and the majority of other revenue rates as part of this Application.

16

17 Table 2 summarizes the approved Generator Service charges for 2020 and the proposed

18 Generator Service charges for 2021-2025.

1920

Table 2 – Generator Service Charges

	2020	2021	2022	2023	2024	2025
MicroFIT and Net-Metering ERF	\$19.00	\$14.00	\$15.00	\$15.00	\$15.00	\$16.00
FIT ERF	\$129.00	\$76.00	\$78.00	\$80.00	\$82.00	\$84.00
HCI, RESOP, Other ERF	\$281.00	\$314.00	\$322.00	\$330.00	\$338.00	\$347.00

21

22 4.2. STANDARD SUPPLY SERVICE CHARGE

- 23 Hydro Ottawa is proposing to increase the Standard Supply Service Administrative Charge
- 24 ("SSS Charge") rate to align with the 2021-2025 Retail Services Distributor-consolidated billing
- 25 monthly charge. The corresponding increase will result in customers paying an equal service

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 9 of 11

- 1 charge, regardless of electricity service provider, and will maintain the pricing between Hydro
- 2 Ottawa and Retailers with respect to this service.

3

- 4 On November 28, 2019, the OEB released the 2020 Retailer Service Rates, with the inflationary
- 5 adjustment. Hydro Ottawa has used the OEB-approved 2020 inflation factor of 2.0% to adjust
- 6 the rate for 2021, and increased the rate in 2022-2025 using the escalation rate of 2.51%,
- 7 consistent with the escalation rate applied throughout this Application.

8

- 9 Table 3 provides the approved 2020 SSS Charge and summarizes the proposed revised SSS
- 10 Charge for 2021-2025.

1112

Table 3 – SSS Charges

	2020	2021	2022	2023	2024	2025
Standard Supply Service Administrative Charge	\$0.25	\$0.62	\$0.64	\$0.66	\$0.68	\$0.70

13 14

15 5. NEW SERVICE CHARGES

16 5.1. EASEMENT CERTIFICATE FOR UNREGISTERED EASEMENTS

- 17 Formerly included with the Account Certificate for the 2016-2020 period, Hydro Ottawa wishes
- 18 to separate the Easement Certificate for Unregistered Easements from the former Account
- 19 Certificate for the 2021-2015 period.

- 21 For the Easement Certificate for Unregistered Easements, Hydro Ottawa proposes a new rate
- 22 of \$25 for the 2021-2025 period which is reflective of the cost to offer this service. The
- 23 Easement Certificate for Unregistered Easements service involves researching and presenting
- 24 findings. Services of this nature were historically lumped in with the Account Certificate;
- 25 however, the costs to Hydro Ottawa were not sufficiently recovered. Typically, these services

⁹ Ontario Energy Board, *Decision and Order in the matter of the inflationary adjustment effective January 1, 2020 for energy retailer service charges for electricity distributors*, EB-2019-0280 (November 28, 2019), Schedule A.

¹⁰ https://www.oeb.ca/industry/applications-oeb/electricity-distribution-rates/2020-electricity-distribution-rate#updates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 10 of 11

1 vary in terms of resource effort and time. The proposed charge is therefore based upon Hydro

2 Ottawa's work for others hourly labour rate.

3

4 5.2. SPECIFIC ACCESS TO POWER POLES - WIRELESS ATTACHMENTS

5 On January 28, 2016, the OEB released a Decision and Order authorizing electricity distributors

6 to charge market rates for wireless pole attachments.11 Hydro Ottawa entered into its first

7 third-party wireless pole attachment agreement in the final quarter of 2018. Hydro Ottawa will

8 continue to follow the direction in the OEB's decision when entering into any new wireless pole

9 attachment agreements during the 2021-2025 period.

10

11 6. REVISED SERVICE CHARGE DESCRIPTIONS

12 6.1. ACCOUNT CERTIFICATE

13 Hydro Ottawa is currently authorized to charge for the production of an arrears certificate. This

14 service, as well as an unregistered easements certificate, are typically received prior to closing

15 a real estate transaction. As such, both services are provided under the existing Account

16 Certificate Charge of \$15 for 2016-2020, regardless of whether one or both services are

17 provided. In more recent years, requests for an arrears certificate have declined. Hydro Ottawa

18 wishes to rename this service charge to Arrears Certificate to better reflect the service provided

9 by proposing to eliminate the Account Certificate Charge. Hydro Ottawa plans to apply the

20 current rate of \$15 and adjust for escalation increases in 2021-2025.

21

22 6.2. ENERGY RESOURCE FACILITY ADMINISTRATION CHARGE

The Energy Resource Facility Administration Charge - Without Account Set Up (One Time) is

24 charged when there is an assignment of contracts which require legal services and service

25 entrance assessments on the part of Hydro Ottawa. This charge applies to new generation

26 facilities associated with a new or existing generation account, regardless of size.

Ontario Energy Board, Decision and Order - Amending Rate-Regulated Electricity Distributor Licences to Authorize
 Market Rates for Wireless Pole Attachments, EB-2016-0015 (January 28, 2016).

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 7 Schedule 1 UPDATED May 5, 2020 Page 11 of 11

- 1 Where a generation account does not already exist, the Account Set Up charge will also be
- 2 applied. Accordingly, Hydro Ottawa likewise proposes to remove the Energy Resource Facility
- 3 Administration Charge With Account Set Up (One Time) from being listed separately on its
- 4 Tariff of Rates and Charges. As a result, Hydro Ottawa proposes that the description of Energy
- 5 Resource Facility Administration Charge Without Account Set Up (One Time) be changed to
- 6 Energy Resource Facility Administration Charge (Account Set Up Charge separately if
- 7 applicable).

8

- 9 The revised Energy Resource Facility Administration Charges reflect a reassessment of the
- 10 costs associated with establishing these accounts. Hydro Ottawa further proposes that the 2021
- 11 charges be scaled annually by 2.51% for 2022-2025. As noted above, this is consistent with the
- 12 escalation rate applied to Hydro Ottawa's 2022-2025 OM&A expenses and the majority of other
- 13 revenue rates as part of this Application.

14

15 7. SERVICE CHARGE CALCULATIONS

- 16 In accordance with the methodology outlined in the EDR Handbook, the 2021 service charge
- 17 calculations are provided in Attachment 8-7-1(A): Proposed and New Specific Service Charge
- 18 Calculations.

19

20 8. SERVICE CHARGE REVENUES

- 21 A schedule of the associated revenues from all SSCs for 2021-2025 is provided in UPDATED
- 22 Exhibit 3-2-1: Other Revenue Summary.

Transformers	No Load Loss (W)	Load Loss (W)	Monthly No Load Loss (kW)	Monthly No Load Loss (kWH)	Monthly Load Loss (kW)	Monthly Load Loss (kWH)	Monthly Total Loss (kW)	Monthly Total Loss (kWH)	Cost of Transmission and LV per kW	Cost of Energy and Wholesale Market per kWh**	Total Monthly cost of power	Cost of Distribution per kW	Total

UPDATED LOSS ADJUSTMENT FACTORS

2

1

3 1. INTRODUCTION

- 4 As per the requirements set out in section 2.8.9 of the OEB's Chapter 2 Filing Requirements for
- 5 Electricity Distribution Rate Applications, as updated on July 12, 2018 and addended on July 15,
- 6 2019 ("Filing Requirements"), this Schedule outlines information related to Hydro Ottawa's Loss
- 7 Adjustment Factors.

8

9 2. **DISTRIBUTION LOSSES**

O As originally submitted, Table 1 provides losses as a percentage of purchases for each of the

11 five years in the 2014-2018 period. The updated version of Table 1 below provides losses as a

12 percentage of purchases for each of the five years in the 2015-2019 period. Hydro Ottawa

13 losses have not been greater than 5% in the past five years. There are no distributors

14 embedded in Hydro Ottawa's service area and the utility is not an embedded distributor itself.

15 However, it does have a number of delivery points embedded in Hydro One Networks Inc.'s

16 service territory.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 9 Schedule 1 UPDATED May 5, 2020 Page 2 of 3

Table 1 – AS ORIGINALLY SUBMITTED – Losses as a Percentage of Purchases for the

Previous Five Years¹

	2014	2015	2016	2017	2018
Electricity Purchases (MWh)	7,636,154	7,622,794	7,600,820	7,410,784	7,612,656
Electricity Sales (MWh)	7,425,541	7,374,808	7,374,415	7,190,875	7,367,818
Losses (MWh)	210,614	247,987	226,405	219,909	244,838
Losses %	2.76%	3.25%	2.98%	2.97%	3.22%

Table 1 – UPDATED FOR 2019 ACTUALS – Losses as a Percentage of Purchases for the

5 Previous Five Years²

	2015	2016	2017	2018	2019
Electricity Purchases (MWh)	7,622,794	7,600,820	7,410,784	7,612,656	7,466,403

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 9 Schedule 1 UPDATED May 5, 2020 Page 3 of 3

- 1 Hydro Ottawa has completed UPDATED Attachment 8-9-1(A): OEB Appendix 2-R Loss
- 2 Factors, as required by the Filing Requirements.

3

- 4 As a result of completing **UPDATED** Attachment 8-9-1(A): OEB Appendix 2-R Loss Factors,
- 5 Hydro Ottawa is requesting approval of revised loss factors. As originally submitted, the loss
- 6 factors are based on the five-year average ending in 2018, for Secondary and Primary Metered
- 7 Customers. Table 3 below summarizes the original revised Loss Adjustment Factors.

8

- 9 In accordance with UPDATED Attachment 8-9-1(A): OEB Appendix 2-R Loss Factors, Hydro
- 10 Ottawa is requesting approval of revised loss factors based on the five-year average ending in
- 11 2019 for Secondary and Primary Metered Customers. Please refer to the updated version of
- 12 Table 3 below, which summarizes the revised Loss Adjustment Factors.

13 14

Table 3 – AS ORIGINALLY SUBMITTED – Revised Loss Adjustment Factors

	Total Loss Factor
Secondary Metered Customer < 5,000 kW	1.0331
Secondary Metered Customer > 5,000 kW	1.0155
Primary Metered Customer < 5,000 kW	1.0228
Primary Metered Customer > 5,000 kW	1.0053

1516

Table 3 – UPDATED FOR 2019 ACTUALS – Revised Loss Adjustment Factors

	Total Loss Factor
Secondary Metered Customer < 5,000 kW	1.0338
Secondary Metered Customer > 5,000 kW	1.0152
Primary Metered Customer < 5,000 kW	1.0234
Primary Metered Customer > 5,000 kW	1.0051

17

18 Hydro Ottawa proposes to use the updated loss factors for the 2021-2025 period.

UPDATED - Appendix 2-R Loss Factors

		Historical Years			5-Year		
		2015	2016	2017	2018	2019	Average
	Losses Within Distributor's System	n					
A(1)	"Wholesale" kWh delivered to distributor (higher value)	7,622,794,415	7,600,819,936	7,410,783,958	7,612,655,949	7,466,402,854	7,542,691,422
A(2)	"Wholesale" kWh delivered to distributor (lower value)	7,578,831,121	7,561,401,253	7,373,645,764	7,577,013,696	7,432,131,689	7,504,604,705

	Total Losses						
I	Total Loss Factor = G x H	1.0354	1.0324	1.0324	1.0353	1.0331	1.0338

Notes:

A(1) If directly connected to the IESO-controlled grid, kWh pertains to the virtual meter on the primary or high voltage side of the transformer at the interface with the transmission grid. This corresponds to the "With Losses" kWh value provided by the IESO's MV-WEB. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4. It is the https://example.com/higher-nd/4</a

If fully embedded within a host distributor, kWh pertains to the virtual meter on the primary or high voltage side of the transformer, at the interface between the host distributor and the transmission grid. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh w Losses" should be reported. This corresponds to the <u>higher</u> of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

A(2) If directly connected to the IESO-controlled grid, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface with the transmission grid. This corresponds to the "Without Losses" kWh value provided by the IESO's MV-WEB. It is the <u>lower</u> of the two kWh values provided by MV-WEB.

If fully embedded with the host distributor, kWh pertains to a metering installation on the secondary or low voltage side of the transformer at the interface between the embedded distributor and the host distributor. For example, if the host distributor is Hydro One Networks Inc., kWh from the Hydro One Networks' invoice corresponding to "Total kWh" should be reported. This corresponds to the <u>lower</u> of the two kWh values provided in Hydro One Networks' invoice.

If partially embedded, kWh pertains to the sum of the above.

Additionally, kWh pertaining to distributed generation directly connected to the distributor's own distribution network should be included in **A** (2).

- If a Large Use Customer is metered on the secondary or low voltage side of the transformer, the default loss is 1% (i.e., **B** = 1.01 X **E**). This value should not include supply facility losses. However, the total loss factor on the tariff of rate and charges and applied to customers consumption should include the supply facility loss factor.
- **D** kWh corresponding to D should equal metered or estimated kWh at the customer's delivery point.
- **E** Metered consumption of Large Use customers.
- G and I These loss factors pertain to secondary-metered customers with demand less than 5,000 kW.
 - **H** Actual Supply Facility Loss Factor as calculated by dividing A(1) by A(2).

UPDATED CURRENT AND PROPOSED TARIFF OF RATES AND CHARGES

2

1

3 Hydro Ottawa's approved 2020 and proposed 2021 tariffs of rates and charges are provided in

4 UPDATED Attachment 8-10-1(A): OEB Workform - 2020 Current and 2021 Proposed Tariff of

5 Rates and Charges. The utility's 2022-2025 proposed tariff of rates and charges are provided in

6 UPDATED Attachment 8-10-1(B): OEB Workform - 2022-2025 Proposed Tariff of Rates and

7 Charges.

8

Hydro Ottawa encountered issues with UPDATED Attachment 8-10-1(A): OEB Workform - 2020

Current and 2021 Proposed Tariff of Rates and Charges. For the "General Service Less Than

1 50 kW Service Classification", "Unmetered Scattered Load Service Classification", and "Street

12 Lighting Service Classification" there were errors with the rate riders. The rate rider for Group 2

accounts is being calculated at both the sub total A and sub total B, but should only be in sub

total A. UPDATED Attachment 8-12-1(A): Bill Impacts Model 2021-2025 provides the correct bill

5 impacts. The model also would not allow an update to the 2021 proposed rate for

16 retailer-consolidated billing monthly credit, per customer. UPDATED Attachment 8-12-1(A): Bill

17 Impacts Model 2021-2025 contains the correct amount.

Hydro Ottawa Limited TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2020

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0046

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Tariff Schedule and Bill Impacts Model

GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts taking electricity at 750 volts or less whose monthly average peak demand is less than, or is forecast to be less than 50 kW. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Global Adjustment and the HST.

Tariff Schedule and Bill Impacts Model

GENERAL SERVICE 50 TO 1,499 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,500 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

GENERAL SERVICE 1,500 TO 4,999 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 1,500 kW but less than 5,000 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

LARGE USE SERVICE CLASSIFICATION

This classification refers to an account whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than 5,000 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase whose monthly average peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. These connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information/documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined in accordance with O. Reg. 429/04. Qualification for this classification is at the discretion of Hydro Ottawa as defined in its Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Page 22 of 58

Hydro Ottawa Limited TARIFF OF RATES AND CHARGES

Effective and Implementation Date January 1, 2021

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0261

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

EB-2019-0261

GENERAL SERVICE LESS THAN 50 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts taking electricity at 750 volts or less whose monthly average peak demand is less than, or is forecast to be less than 50 kW. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Board approval, such as the Global Adjustment and the HST.

Effective and Implementation Date January 1, 2021

This schedule supersedes and replaces all previously approved schedules of Rates, Charges and Loss Factors

EB-2019-0261

GENERAL SERVICE 50 TO 1,499 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,500 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase whose monthly average peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. These connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information/documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined in accordance with O. Reg. 429/04. Qualification for this classification is at the discretion of Hydro Ottawa as defined in its Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

This classification applies to an electricity generation facility contracted under the Independent Electricity System Operator's FIT program and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

HCI, RESOP, OTHER ENERGY RESOURCE SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Independent Electricity System Operator's HCI, RESOP and Other Energy Resource programs and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

RETAIL SERVICE CHARGES (if applicable)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Retail Service Charges refer to services provided by a distributor to retailers or customers related to the supply of competitive electricity.

	\$	102.00
One-time charge, per retailer, to establish the service agreement between the distributor and the retailer	Φ	
Monthly fixed charge, per retailer	\$	40.80
Monthly variable charge, per customer, per retailer	\$/cust.	1.02
Distributor-consolidated billing monthly charge, per customer, per retailer	\$/cust.	0.61
Retailer-consolidated billing monthly credit, per customer, per retailer	\$/cust.	-0.61
Service Transaction Requests (STR)		
Request fee, per request, applied to the requesting party	\$	0.51
Processing fee, per request, applied to the requesting party	\$	1.02
Request for customer information as outlined in Section 10.6.3 and Chapter 11 of the Retail		
Settlement Code directly to retailers and customers, if not delivered electronically through the		
Electronic Business Transaction (EBT) system, applied to the requesting party		
Up to twice a year	\$	no charge
More than twice a year, per request (plus incremental delivery costs)	\$	4.08
Notice of switch letter charge, per letter (unless the distributor has opted out of applying the charge as per the	e	
Ontario Energy Board's Decision and Order EB-2015-0304, issued on February 14, 2019)	\$	2.04

LOSS FACTORS

If the distributor is not capable of prorating changed loss factors jointly with distribution rates, the revised loss factors will be implemented upon the first subsequent billing for each billing cycle.

Total Loss Factor - Secondary Metered Customer < 5,000 kW	2.0338
Fotal Loss Factor - Secondarý ivietered Customer ≥ 5,000 kW	1.0152
rotal Loss Factor - Primary interered Gustomer < 5,000 kw	1.0234
rotal Loss Factor - Primary interered Gustomer > 5,000 kw	1.0051

No Load and load losses from CSA standard C802-94: Maximum losses for distribution, power and dry-type transformers commercial use.

Average load factor = 0.46 average loss factor = 0.2489

^{*}For non-preferred KVA ratings no load and load losses are interpolated as per CSA standard

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 10 Schedule 1 Attachment A UPDATED May 5, 2020 Page 41 of 59

Tariff Schedule and Bill Impacts Model (2021 Cost of Service Filers)

The bill comparisons below must be provided for typical customers and consumption levels. Bill impacts must be provided for residential customers consuming 750 kWh per month and general service customers consuming 2,000 kWh per month and having a monthly demand of less than 50 kW. Include bill comparisons for Non-RPP (retailer) as well. To assess the combined effects of the shift to fixed rates and other bill impacts associated with changes in the cost of distribution service, applicants are to include a total bill impact for a residential customer at the distributor's 10th consumption percentile (In other words, 10% of a distributor's residential customers consume at or less than this level of consumption on a monthly basis). Refer to section 3.2.3 of the Chapter 3 Filling Requirements For Electricity Distribution Rate Applications.

For certain classes where one or more customers have unique consumption and demand patterns and which may be significantly impacted by the proposed rate changes, the distributor must show a typical comparison, and provide an explanation.

Note:

- 1. For those classes that are not eligible for the RPP price, the weighted average price including Class B GA through end of May 2017 of \$0.1101/kWh (IESO's Monthly Market Report for May 2017, page 22) has been used to represent the cost of power. For those classes on a retailer contract, applicants should enter the contract price (plus GA) for a more accurate estimate. Changes to the cost of power can be made directly on the bill impact table for the specific class.
- 2. Please enter the applicable billing determinant (e.g. number of connections or devices) to be applied to the monthly service charge for unmetered rate classes in column N. If the monthly service charge is applied on a per customer basis, enter the number "1".

 Distributors should provide the number of connections or devices reflective of a typical customer in each class.
- Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

EB-2019-0261

GENERAL SERVICE 50 TO 1,499 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,500 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase whose monthly average peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. These connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information/documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined in accordance with O. Reg. 429/04. Qualification for this classification is at the discretion of Hydro Ottawa as defined in its Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST

GENERAL SERVICE 50 TO 1,499 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,500 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

HCI, RESOP, OTHER ENERGY RESOURCE SERVICE CLASSIFICATION

This classification applies to an electricity generation facility contracted under the Independent Electricity System Operator's HCI, RESOP and Other Energy Resource programs and connected to the distributor's distribution system. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable.

It should be noted that this schedule does not list any charges, assessements or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

UNMETERED SCATTERED LOAD SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase whose monthly average peak demand is less than, or is forecast to be less than, 50 kW and the consumption is unmetered. These connections include cable TV power packs, bus shelters, telephone booths, traffic lights, railway crossings, etc. The customer will provide detailed manufacturer information/documentation with regard to electrical demand/consumption of the proposed unmetered load. Class B consumers are defined in accordance with O. Reg. 429/04. Qualification for this classification is at the discretion of Hydro Ottawa as defined in its Conditions of Service.

APPLICATION

Service Charge (per connection)

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

RESIDENTIAL SERVICE CLASSIFICATION

This classification includes accounts taking electricity at 120/240 volts single phase where the electricity is used exclusively in a separately metered living accommodation. Customers shall be residing in single-dwelling units that consist of a detached house or one unit of a semi-detached, duplex, triple or quadruplex house, with a residential zoning. Separately metered dwellings within a town house complex or apartment building also qualify as residential customers. Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

GENERAL SERVICE 50 TO 1,499 KW SERVICE CLASSIFICATION

This classification refers to non residential accounts whose monthly average peak demand is equal to or greater than, or is forecast to be equal to or greater than, 50 kW but less than 1,500 kW. Class A and Class B consumers are defined in accordance with O. Reg. 429/04. Further servicing details are available in the distributor's Conditions of Service.

APPLICATION

The application of these rates and charges shall be in accordance with the Licence of the Distributor and any Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, which may be applicable to the administration of this schedule.

No rates and charges for the distribution of electricity and charges to meet the costs of any work or service done or furnished for the purpose of the distribution of electricity shall be made except as permitted by this schedule, unless required by the Distributor's Licence or a Code or Order of the Ontario Energy Board, and amendments thereto as approved by the Ontario Energy Board, or as specified herein.

Unless specifically noted, this schedule does not contain any charges for the electricity commodity, be it under the Regulated Price Plan, a contract with a retailer or the wholesale market price, as applicable. In addition, the charges in the MONTHLY RATES AND CHARGES - Regulatory Component of this schedule do not apply to a customer that is an embedded wholesale market participant.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of WMS - Sub-account CBR Class B is not applicable to wholesale market participants (WMP), customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new Class B customers.

If included in the following listing of monthly rates and charges, the rate rider for the disposition of Global Adjustment is only applicable to non-RPP Class B customers. It is not applicable to WMP, customers that transitioned between Class A and Class B during the variance account accumulation period, or to customers that were in Class A for the entire period. Customers who transitioned are to be charged or refunded their share of the variance disposed through customer specific billing adjustments. This rate rider is to be consistently applied for the entire period to the sunset date of the rate rider. In addition, this rate rider is applicable to all new non-RPP Class B customers.

It should be noted that this schedule does not list any charges, assessments or credits that are required by law to be invoiced by a distributor and that are not subject to Ontario Energy Board approval, such as the Global Adjustment and the HST.

Note: A Customer shall be billed for Demand based on the greater of the measured kilowatts or ninety percent (90%) of the measured kilovolt-amperes.

UPDATED REVENUE PER RATE CLASS UNDER CURRENT AND PROPOSED RATES

3 1. INTRODUCTION

In accordance with section 2.8.11 of the OEB's *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019, this Schedule outlines Hydro Ottawa's revenue per rate class under current and proposed rates. Please see Tables 1 through 5 for detailed calculations of revenue per rate class under 2020 rates, and a reconciliation of rate class revenue at 2020 rates and other revenue to total revenue requirement. The revenue deficiency/sufficiency was determined by calculating what the revenue would have been using 2020 rates, monthly Service Charge ("SC") and Volumetric Rate ("Vol. R"), and the forecasted 2021-2025 load and customer/connection numbers. This produces the amount of revenue Hydro Ottawa would collect at 2020 rates with an updated load forecast. The estimated Transformer Ownership Credit ("TOC") is used to adjust the revenue at 2020 rates to produce Hydro Ottawa's revenue requirement after other revenues. Hydro Ottawa compiled the analysis in this manner as the 2020 rates offer a stable base for comparisons with each subsequent year.

2

Detailed calculations of revenue requirement at proposed rates can be found within Sheet 13:
Rate Design in the Revenue Requirement Workforms which accompany UPDATED Exhibit
6-1-1: Calculation of Revenue Deficiency or Sufficiency. More specifically, these workforms are
included in the following Attachments:

- **UPDATED** Attachment 6-1-1(A): OEB Workform 2021 Revenue Requirement Workform
- UPDATED Attachment 6-1-1(B): OEB Workform 2022 Revenue Requirement Workform
- UPDATED Attachment 6-1-1(C): OEB Workform 2023 Revenue Requirement

 Workform
- UPDATED Attachment 6-1-1(D): OEB Workform 2024 Revenue Requirement
 Workform
- UPDATED Attachment 6-1-1(E): OEB Workform 2025 Revenue Requirement Workform

UPDATED BILL IMPACT INFORMATION

2

1

3 1. INTRODUCTION

- 4 This Schedule describes bill impacts for typical customers in each rate class arising from Hydro
- 5 Ottawa's revenue requirement adjusted for cost allocation.

6

- 7 Details of the impacts of the proposed rates are provided in **UPDATED** Attachment 8-12-1(A):
- 8 2021-2025 Bill Impacts Model. UPDATED Attachment 8-12-1(A) illustrates individual and
- 9 combined impacts of the distribution component of the rate transmission and network charges,
- 10 as well as the total bill impact, as based upon the typical consumption level used for each rate
- 11 class.

12

- 13 Of note, in the 2020 Rate Order found in UPDATED Attachment 8-12-1(A), the MicroFIT and
- 14 Micro-Net-Metering classes have been separated in order to provide clarity around the
- 15 application of the rate. "Micro-Net-Metering" became "Net-Metering" and its own separate class.
- 16 This change in the wording is intended to allow Hydro Ottawa to charge the Net Metering Charge
- 17 to all sizes of net metered generation, rather than only those that have nameplate value of 10 kW
- 18 and below.

19

20 2. SUMMARY OF RATE IMPACTS

- 21 The updated version of Table 1 below provides a summary of bill impacts per rate class including
- the total change in monthly bill, as expressed in both monetary and percentage terms. The
- 23 summary is inclusive of variance accounts. Additional bill impacts are provided in **UPDATED**
- 24 Attachment 8-12-1(A): 2021-2025 Bill Impacts Model which are not shown in the updated version
- 25 of Table 1.

Schedule 1
UPDATED
May 5, 2020
Page 4 of 6

1 2.1. SUMMARY OF RESIDENTIAL RATE IMPACTS

- 2 Figure 1 below, as originally submitted, displays the bill components for a Hydro Ottawa
- 3 Regulated Price Plan ("RPP") residential consumer who uses 750 kWh per month.

4 5 For the 2016-2020 period, the bill has been illustrated using the OEB-approved rates for all

6 charges. Prior to November 1, 2019, the Total Bill (After Rebate) amount has been adjusted by

7 the 8% Provincial Rebate as a result of the Ontario Rebate for Electricity Consumers Act, 2016.

8

- 9 For the 2021-2025 Test Years, Hydro Ottawa has used the rates detailed in Attachment
- 10 8-12-1(A): 2021-2025 Bill Impacts Model. This includes the following: the proposed distribution,
- 11 transmission, and network charges; the current RPP rates (effective November 1, 2019); the
- 12 Wholesale charge; taxes; and application of the 31.8% Ontario Electricity Rebate to all years.

13

- 14 Figure 1, as updated below, displays the bill components for a Hydro Ottawa Regulated Price
- 15 Plan ("RPP") residential consumer who uses 750 kWh per month.

16

- 17 For the 2016-2020 period, the bill has been illustrated using the OEB-approved rates for all
- 18 charges. Prior to November 1, 2019, the Total Bill (After Rebate) amount has been adjusted by
- 19 the 8% Provincial Rebate as a result of the Ontario Rebate for Electricity Consumers Act, 2016.

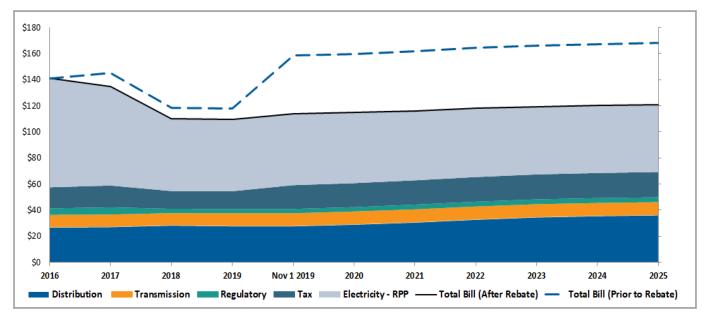

- 21 For the 2021-2025 Test Years, Hydro Ottawa has used the rates detailed in UPDATED
- 22 Attachment 8-12-1(A): 2021-2025 Bill Impacts Model. This includes the following: the proposed
- 23 distribution, transmission, and network charges; RPP rates effective November 1, 2019; the
- 24 Wholesale charge; taxes; and application of the 31.8% Ontario Electricity Rebate to all years.

¹ Applicable to eligible customers only. Refer to the *Ontario Clean Energy Benefit Act*, 2010.

note that the Unarge \$ columns provide creakdowns of the amounts that each oill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS-50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS-50kW (kWh) - 60, 100, 500, 10000 Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

¹ Applicable to eligible customers only. Refer to the *Ontario Clean Energy Benefit Act*, 2010.

Note that the "Charge S" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS-50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS-50kW (kWh) - 00, 100, 500, 10000 Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge 5" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge 5" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000

GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 12 Schedule 1 Attachment A **UPDATED** May 5, 2020 Page 15 of 56

Customer Class: Residential

TOU / non-TOU: TOU

Consumption 500 kWh ® May 1 - Octobe

¹ Applicable to eligible customers only. Refer to the *Ontario Clean Energy Benefit Act*, 2010.

Note that the "Charge \$" columns provide breakdowns of the amounts that each bill component contributes consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, the to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge \$" columns provide breakdowns of the amounts that each bill component contributes consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, the to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000

GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000...

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Customer Class: Residential

TOU / non-TOU: TOU

Consumption 2,000 kWh May 1 - October

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge 5" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Customer Class: General Service < 50 kW

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge \$" columns provide breakdowns of the amounts that each bill component contributes consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, the to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates

2025 Proposed Volume

Charge

Impact 2025 vs 2024

to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjuste

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge 5" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000

GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Customer Class: General Service < 50 kW

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge's" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000

GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 12 Schedule 1 Attachment A UPDATED May 5, 2020 Page 31 of 56

Customer Class: General Service < 50 kW

TOU / non-TOU: TOU

Consumption 10,000 kWh May 1 - October 31

2025 Proposed

Impact 2025 vs 2024

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

note that the "unarge" columns provide breakdowns of the amounts that each bill component contronsumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addit to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP

¹ Applicable to eligible customers only. Refer to the *Ontario Clean Energy Benefit Act*, 2010.

note that the Charge \$ columns provide breakdowns of the amounts that each bill component contribut consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 SS>50kW (kW)- 60, 100, 500, 1000 Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rat

Impact 2024 vs 2023

2025 Proposed
Rate Volume Charge

Impact 2025 vs 2024

2024 Proposed

Note that the "Charge \$" columns provide breakdowns of the amounts that each bill component contri consumption level at existing and proposed rates.

3.3500%

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000

GS>50kW (kW) - 60, 100, 500, 1000

Loss Factor (%)

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has undated column Fto reflect the most recent Board Approved TOU and Tier RPP

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 12 Schedule 1 Attachment A **UPDATED** May 5, 2020 Page 40 of 56

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Hydro Ottawa Limited EB-2019-0261 Exhibit 8 Tab 12 Schedule 1 Attachment A **UPDATED** May 5, 2020

¹ Applicable to eligible customers only. Refer to the *Ontario Clean Energy Benefit Act*, 2010.

note that the Charge 5 columns provide breakdowns of the amounts that each bill component contributes consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, the to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 SS>50kW (kW)- 60, 100, 500, 1000 Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the .Charge \$ columns provide preakdowns or the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS-50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

Customer Class: General Service 1,500 to 4,999 KW

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

note that the Charge & columns provide preakdowns or the amounts that each bill component columns consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, the to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS+50kW (kWh) - 1000, 2000, 5000, 15000 GS+50kW (kWh) - 1000, 2000, 5000, 15000 GS+50kW (kWh) - 60, 100, 500, 1000 Large Liber - range appropriate for utility Lighting Glasses and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rate

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "unarge s" columns provide preakdowns or the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

3.3800%

3.3800%

Note that the .Charge \$ columns provide preakdowns or the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

3.3500%

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

3.3800%

Loss Factor (%)

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000 GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 SS>50kW (kW)- 60, 100, 500, 1000 Large User - range appropriate for utility Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

¹ Applicable to eligible customers only. Refer to the Ontario Clean Energy Benefit Act, 2010.

Note that the "Charge 5" columns provide breakdowns of the amounts that each bill component contributes to the total monthly bill at the referenced consumption level at existing and proposed rates.

Applicants must provide bill impacts for residential at 800 kWh and GS<50kW at 2000 kWh. In addition, their filing must cover the range that is relevant to their service territory, class by class. A general guideline of consumption levels follows:

Residential (kWh) - 100, 250, 500, 800, 1000, 1500, 2000

GS<50kW (kWh) - 1000, 2000, 5000, 10000, 15000 GS>50kW (kW) - 60, 100, 500, 1000

Large User - range appropriate for utility
Lighting Classes and USL - 150 kWh and 1 kW, range appropriate for utility.

Note that cells with the highlighted color shown to the left indicate quantities that are loss adjusted.

Hydro Ottawa has updated column Fto reflect the most recent Board Approved TOU and Tier RPP rates.

Consumption 150 kWh May 1 - Octobe

Customer Class: Street Light

UPDATED SUMMARY OF CURRENT DEFERRAL AND VARIANCE ACCOUNTS

2

1

1. INTRODUCTION

As originally submitted, this Schedule provides a summary of currently held deferral and variance 5 accounts ("DVAs"), as of December 31, 2018. A continuity schedule for current DVAs can be found in Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity 7 Schedule). While updating its evidence for 2019 actuals, Hydro Ottawa observed that the originally submitted live Excel version of Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule) did not match the PDF version in the Application (which is the correct version). Accordingly, as part of these updates for 2019 actuals, both versions of Attachment 9-1-1(A) are being updated (Excel and PDF).

12

Accounting for 2019 actuals, this Schedule provides a summary of currently held DVAs, as of

December 31, 2019. A continuity schedule for current DVAs can be found in UPDATED

Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule).

16

17 Details of new accounts for which approval is being sought as part of this Application are included

in Exhibit 9-2-1: New Deferral and Variance Accounts. Details of the accounts for which Hydro

Ottawa is seeking disposition are discussed in **UPDATED** Exhibit 9-3-1: Disposition of Deferral

and Variance Accounts.

21

22 **2**. **DETAILS OF DVAs**

- Tables 1 and 2 below present a complete list of Hydro Ottawa's active DVAs. The DVAs are
- 24 categorized based on the OEB's report on the Electricity Distributors' Deferral and Variance
- 25 Account Review Initiative ("EDDVAR Report"), which categorizes the DVAs into Group 1 and
- 26 Group 2 Accounts. In Table 1, Uniform System of Accounts ("USofA") Account 1595 will have a
- 27 Sub-Account for each year from 2016-2020. In Hydro Ottawa's 2020 rate adjustment

 $^{^{28}}$ 1 Ontario Energy Board, Report of the Board on Electricity Distributors' Deferral and Variance Account Review 29 Initiative (EDDVAR) EB-2008-0046 (July 31, 2009).

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 2 of 9

1 application, the Sub-Account for 2014 was cleared on a final basis and is thus not included as

2 part of this Application.²

3

4 Hydro Ottawa confirms that DVAs are being used as prescribed in the OEB's Accounting

5 Procedures Handbook ("APH"). Please refer to UPDATED Exhibit 9-1-2: Group 1 Accounts and

6 **UPDATED** Exhibit 9-1-3: Group 2 Accounts for additional information on these Accounts.

7

8

1 3. CONTINUITY SCHEDULE

A complete continuity schedule for all DVAs, including Sub-Accounts, can be found in Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule), as originally submitted. Hydro Ottawa is using the DVA Workform provided by the OEB on January 31, 2020 via email. The utility has updated the model using audited balances to the end of 2018, and has included 2020 disposition and specific adjustments related to 2019 (inputted into the principal adjustments column BF). Further details on each adjustment are provided in the following pieces of evidence: sheet "3. Appendix A" within Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule); Exhibit 9-1-3: Group 2 Accounts; and Exhibit 9-1-4: Account 1592 PILS and Tax Variance.

11

12 In its original Application, Hydro Ottawa indicated that it will update the DVA model for 2019
13 actuals at a later stage in this Application's proceeding.

14

Accounting for 2019 actuals, a complete continuity schedule for all DVAs, including Sub-Accounts, can be found in UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule). Hydro Ottawa is using the DVA Workform provided by the OEB on January 31, 2020 via email. The utility has updated the model using audited balances to the end of 2019, and has included specific adjustments related to 2019 and 2020 (inputted into the principal adjustments column BF). Further details on each adjustment are provided in the following pieces of evidence: sheet "3. Appendix A" within UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule), UPDATED Exhibit 9-1-3: Group 2 Accounts, and UPDATED Exhibit 9-1-4: Account 1592 PILS and Tax Variance. Hydro Ottawa has added formulas to cells BV80 and BV91 to ensure the variances in cells BW80 and BW91, respectively, are correct in tab 2b. 2017 Continuity Schedule of the UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule).

28

29 For more details on Hydro Ottawa's proposed disposition of DVAs, please see UPDATED
30 Exhibit 9-3-1: Disposition of Deferral and Variance Accounts.

1 4. CARRYING CHARGES

2 The interest rate used for the calculation of all carrying charges to applicable Accounts is

3 prescribed by the OEB and published quarterly on its website. Table 3, as originally submitted,

4 provides a summary of these interest rates up to Q1 2020. The updated version of Table 3

5 includes the interest rates up to Q2 2020. Hydro Ottawa confirms that it uses these interest

6 rates, where applicable.

Q1 2015	1.47%	2.89%							

3 5. RECONCILIATION OF CONTINUITY SCHEDULE VS. REPORTING AND RECORD 4 KEEPING REQUIREMENTS

As originally submitted, Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule) only has immaterial differences in the Account balances as of December 31, 2018 between the continuity schedule and 2.1.7 of the OEB's Reporting and Record

Reeping Requirements ("RRRs"). Hydro Ottawa has calculated column BV of the continuity

9 schedule using updated 2018 RRR values. As indicated earlier in this Schedule, specific

adjustments have been made related to Group 2 Accounts.

12 Accounting for 2019 actuals, UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and

3 Variance Account (Continuity Schedule) has immaterial differences in the updated Account

balances as of December 31, 2019 between the continuity schedule and 2.1.7 of the OEB's

15 RRRs. Hydro Ottawa has calculated column BV of the continuity schedule using updated 2019

16 RRR values. As indicated earlier in this Schedule, specific adjustments have been made related

17 to Group 2 Accounts.

2

11

Hydro Ottawa Limited
EB-2019-0261
Exhibit 9
Tab 1
Schedule 1
UPDATED
May 5, 2020
Page 6 of 9

1 Account 1588 and Account 1589 are different from the RRR balances, as the balances in the

2 continuity schedule reflect OEB Filing Requirement true-ups in 2018 and 2019.

3

4 As originally submitted, sub-Account 1508, other regulatory assets - Y factor variance, does not balance to the 2018 RRR values as there is a \$5.7M principal adjustment in the 2018 column.

5 This adjustment was made to clear the revenue requirement related to Hydro Ottawa's new

7 facilities for 2019 and 2020 on an interim basis, as per the Approved Settlement Agreement

governing the utility's 2016-2020 rate term.6 Additional adjustments related to the Y Factor

9 Account, the New Facilities Deferral Account, and the Gains/Losses from Sale of Existing

10 Facilities Deferral Account have been entered into the 2019 column. Based on updates for 2019

11 actuals, the Y factor does not balance to the 2019 RRR values as there is a \$3.4M principal

adjustment in the 2019 column which consists of an adjustment for both 2019 and 2020. Please

13 refer to UPDATED Exhibit 9-1-3: Group 2 Accounts as well as sheet "3. Appendix A" within

4 UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity

15 Schedule) for further information.

16

17 As originally submitted, sub-Account of 1592 – PILS and Tax Variances – Capital Cost

18 Allowance ("CCA") Changes does not balance to 2018 RRR values, as an adjustment has been

9 entered into the 2019 principal column. On July 25, 2019, the OEB released a letter which

0 directed utilities to record into a newly established Sub-Account of 1592 the tax impact of Bill

²¹ C-97. Hydro Ottawa has entered an adjustment amount in order to clear balances related to Bill

22 C-97. Please see sheet "3. Appendix A" within UPDATED Attachment 9-1-1(A): OEB Workform -

23 Deferral and Variance Account (Continuity Schedule) as well as UPDATED Exhibit 9-1-4:

24 Account 1592 PILS and Tax Variance for further information on this Sub-Account. Based on

25 updates for 2019 actuals, sub-account 1592 does not balance to the 2019 RRR values as there

26 is a \$(5.4M) principal adjustment in the 2019 column which consists of adjustments for 2019

27 and 2020.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 7 of 9

- 1 Finally, adjustments have been made to the LRAM Variance Account (as originally submitted) in
- 2 columns BD and BI to reverse all LRAM recorded up to December 31, 2018, while another
- 3 adjustment was added to column BF to balance with the LRAM being requested as per Exhibit
- 4 4-5-2: LRAM Variance Account. Please see Exhibit: 4-5-2: LRAM Variance Account for
- 5 information on the amount being requested for clearance.

6

- 7 Accounting for 2019 actuals, adjustments have been made to the LRAM Variance Account in
- 8 columns BF and BK to reverse all LRAM recorded up to December 31, 2019, while another
- 9 adjustment in the same cell includes the LRAM being requested as per UPDATED Exhibit 4-5-2:
- 10 LRAM Variance Account. Please see UPDATED Exhibit: 4-5-2: LRAM Variance Account for
- 11 information on the amount being requested for clearance.

12

13 6. NEW DVAs AND SUB-ACCOUNTS

14 Please see Exhibit 9-2-1: New Deferral and Variance Accounts for information.

15

16 7. ADJUSTMENTS TO DVAs

- 17 Hydro Ottawa confirms that it has not made any adjustments to DVA balances that were
- 18 previously approved by the OEB on a final basis.

19

20 8. STATUS OF GROUP 2 ACCOUNTS

- 21 Hydro Ottawa identified active Group 2 Accounts in Table 2 above. The updated version of
- 22 Table 4 below outlines how the utility's planned action for the Group 2 Accounts in 2021-2025
- 23 (i.e. continue, continue with modification, add, or discontinue). For information on those
- 24 Accounts for which Hydro Ottawa is requesting modification, please see Exhibit 9-2-1: New
- 25 Deferral and Variance Accounts. For information on those Accounts which Hydro Ottawa is
- 26 requesting to add, please see UPDATED Exhibit 9-1-3: Group 2 Accounts.

Questions	
To determine the first year the continuity schedules	s in tabs 2a and 2b will be generated for input, answer the following questions:
Question 1 For Accounts 1588 and 1589, Please indicate the year the accounts were last dispose	ed on a final basis
b) If the accounts were last approved on an interim bas i) there are no changes to the previously approved approved for diposition on an interim basis.	ed interim balances, select the year that the balances were last 2018
for disposition on a final basis.	interim balaces, select the year that the balances were last approved
(e.g. If 2017 balances reviewed in the 2019 rate applica	tion were to be selected, select 2017)
Question 2 For the remaining Group 1 DVAs, Please indicate the year the accounts were last dispose	ed on a final basis
b) If the accounts were last approved on an interim bas i) there are no changes to the previously approved approved for diposition on an interim basis.	elect the year that the balance was last approved on a final basis. is, and ed interim balances, select the year that the balances were last interim balaces, select the year that the balances were last approved
Question 3 Select the earliest vintage year in which there is a balar (e.g. If 2016 is the earliest vintage year in which there is	
Question 4 Select the earlier of i) the year in which Group 2 DVAs varied to accumulate	were last disposed and ii) the earliest year in which Group 2 DVAs
To determine whether tabs 6 and 6.2 will be general	ed, answer the following questions
Question 5 Did you have any Class A customers at any point during year the balance selected in #1 above to the year requestions.	g the period that the Account 1589 balance accumulated (i.e. from the sted for disposition) or the test year?
Question 6	
	g the period where the balance in Account 1580, Sub-account CBR above to the year requested for disposition) or the test year?

¹ Account 1595 sub-accounts are to be allocated to rate classes in proportion to the recovery share as established when rate riders were implemented.

² The proportion of customers for the Residential and GS<50 Classes will be used to allocate Account 1551.

³ Input the allocation as determined in the LRAMVA model. The associated rate riders will be calculated in the EDDVAR model.

⁴ If a distributor uses the actual GA price to bill non-RPP Class B customers for an entire rate class, it must exclude these customers from the allocation of the GA balance and the calculation of the resulting rate riders. These rate classes are not to be charged/refunded the general GA rate rider as they did not contribute to the GA balance. If this is the case, this must be noted in the evidence and the proposed allocation methodology must be explained.

Ontario Energy Board

2021 Deferral/Variance Account Workform

1a	The year Account 1589 GA was last disposed	2018
1b	The year Account 1580 CBR Class B was last disposed	2018 Note that the sub-account was established in 2015.
2a	Did you have any customers who transitioned between Class A and Class B (transition customers) during the period the Account 1589 GA balance accumulated (i.e. from the year after the balance was last disposed (regardless of if the disposition was interim or final) to the current year requested for disposition?	(e.g. If you received approval to dispose of the GA variance account balance as at December 31, 2015, the period the GA variance accumulated would be 2016 to 2018.)
2b	Did you have any customers who transitioned between Class A and Class B (transition customers) during the period the Account 1580, sub-account CBR Class B balance accumulated (i.e. from the year after the balance was lat	(e.g. If you received approval to dispose of the CBR Class B balance as at December 33, 2016, the period the CBR Class B variance accumulated would be 2017 to 2018,)
3a	Enter the number of transition customer you had during the period the Account 1589 GA or Account 1580 CBR B balance accumulated	26

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 1 Attachment A UPDATED May 5, 2020 Page 20 of 25

This tab allocates the GA balance to transition customers (i.e Class A customers who were former Class B customers and Class B customers who were former Class A customers) who contributed to the current GA balance. The tables below calculate specific amounts for each customer who made the change. The general GA rate rider to non-RPP customers is not to be charged to the transition customers that are allocated amounts in the table below. Consistent with prior decisions, distributors are generally expected to settle the amount through 12 equal adjustments to bills.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 1 Attachment A UPDATED May 5, 2020 Page 22 of 25

This tab allocates the CBR Class B balance to transition customers (i.e Class A customers who were former Class B customers and Class B customers who were former Class A customers) who contributed to the current CBR Class B balance. The tables below calculate specific amounts for each customer who made the change. The general CBR Class B rate rider is not to be charged to the transition customers that are allocated amounts in the table below. Consistent with prior decisions, distributors are generally expected to settle the amount through 12 equal adjustments to bills.

Year Account 1580 CBR Class B was Last Disposed	2018

If the CBR Class B rate rider calculated in tab 7 rounds to zero at the fourth decimal place for one or more rate classes, the entire balance in Account 1580 CBR Class B, including the amount allocated to transition customers will be transferred to Account 1580 WMS and disposed through the general purpose Group 1 rate riders

No input Required in this tab. The purpose of this tab is to calculate the billing determinants for CBR rate riders for all current Class B customers who did not transition between Class A and B in the period since the Account 1580, sub-account CBR Class B balance accumulated.

The Year the Account 1580 CBR Class B was Last Disposed.

Only for rate classes with WMP customers are the Deferral/Variance Account Rate Riders for Non-WMP calculated separately in the table above. For all rate classes without WMP customers, balances in Accounts 1580 and 1588 are included in Deferral/Variance Account Rate Riders calculated in the first table above and disposed through a combined Deferral/Variance Account and Rate Rider.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 2 UPDATED May 5, 2020 Page 1 of 7

UPDATED GROUP 1 ACCOUNTS

2

1

3 1. INTRODUCTION

4 As per the OEB's report on the *Electricity Distributors' Deferral and Variance Account Review*5 *Initiative* ("EDDVAR Report"), Group 1 accounts include account balances that are cost
6 pass-through and accounts whose original balances were approved by the OEB in a previous
7 proceeding.¹ Please see Table 1 in UPDATED Exhibit 9-1-1: Summary of Current Deferral and
8 Variance Accounts for a list of Hydro Ottawa's active Group 1 deferral and variance accounts
9 ("DVAs").

10

11 2. ENERGY SALES AND COST OF POWER EXPENSE BALANCES

The sale of energy and the purchase of power are pass-through transactions. Hydro Ottawa records monthly retail settlement variance entries related to any difference between the Power Recovery Revenue and Purchased Power.

15

- 16 Upon the adoption of International Financial Reporting Standards (and specifically, of IFRS 14 -17 Regulatory Deferrals Accounts ["IFRS 14"]), the impact of regulatory deferral account balances, 18 including retail settlement variance accounts, are presented as "Net movements in regulatory
- 19 balances, net of tax" on Hydro Ottawa's statements of profit and loss. IFRS 14 permits an entity
- 20 to continue to account for regulatory deferral account balances in accordance with its previous
- 21 Canadian Generally Accepted Accounting Principles ("CGAAP"). However, the presentation of
- 22 regulatory accounts on the Financial Statement has changed from CGAAP.

23

- 24 Totals for Energy Sales ("Power Recovery Revenue") and Cost of Power ("Purchased Power"),
- 25 per the Uniform System of Accounts ("USofA"), are reconciled to the audited financial
- 26 statements in Table 1 below.

Ontario Energy Board, Report of the Board: Electricity Distributors' Deferral and Variance Account Review Initiative (EDDVAR), EB-2008-0046 (July 31, 2009).

3. CLASS A & CLASS B GLOBAL ADJUSTMENT AND COMMODITY

- 5 Total wholesale purchases include purchases from the Independent Electricity System Operator
- 6 ("IESO"), Hydro One Networks Inc. and various embedded generators. On a monthly basis,
- 7 Hydro Ottawa accrues purchased power cost, which includes cost for CT 148 Class B Global
- 8 Adjustment ("GA") and CT 101 Commodity. Hydro Ottawa records such amounts into
- 9 pass-through Class B GA expense and Commodity expense accounts, respectively.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 2 UPDATED May 5, 2020 Page 6 of 7

1 Hydro Ottawa also accrues unbilled Power Recovery Revenue, which includes revenue for

2 Class B Global Adjustment and Commodity. The utility records amounts into pass-through Class

B GA revenue and Commodity revenue accounts, respectively.

4

5 Hydro Ottawa bills all Class B non-Regulated Price Plan ("RPP") customers on the first GA rate

6 posted on the IESO's website. For Commodity, Hydro Ottawa bills RPP customers the Time of

7 Use ("TOU") or Tiered prices ("Tiered"). Non-RPP customers are billed the weighted average

8 hourly spot price ("WAHSP") or the Hourly Ontario Energy Price ("HOEP"). The RPP portion of

9 the CT 148 GA Charge is recorded into the Commodity expense account. Hydro Ottawa

10 confirms that journal entries are recorded as instructed in the OEB's accounting guidance

11 related to commodity pass-through Accounts 1588 and 1589.6

12

13 The estimates for unbilled Power Recovery Revenue are based on preliminary metered data.

14 An interval class customer's unbilled estimate is based on preliminary metered hourly data,

15 while a non-interval class customer's unbilled data is based on preliminary smart metered data.

16 Where meter data is missing, a class average is used as an estimate.

17

18 By the fourth business day of the following month, Hydro Ottawa submits to the IESO the

9 difference between fixed price for TOU and Tiered purchases, as well as the estimated weighted

o average price for RPP customers and the RPP portion of the GA Charge, which is based upon

21 the second GA rate multiplied by the estimated TOU and Tiered kWh (billed and unbilled). The

2 RPP portion of the GA Charge is recorded into Account 1588. The RPP proration is based on

3 billed and estimated unbilled kWh. This is requested through CT 142.

24

25 RPP settlement CT 142 first true-up is completed the month following the initial settlement claim

26 and consists of updating the GA second rate to actual GA rate paid. At the same time, the

27 updates are made to the wholesale purchased power cost (price and volume) to actual price

. .

Ontario Energy Board, Accounting Procedures Handbook Update - Accounting Guidance Related to Commodity Pass-Through Accounts 1588 &1589 (February 21, 2019), page 33.

Schedule 2
UPDATED
May 5, 2020
Page 7 of 7

- 1 and quantity. Additional true-ups are completed when actual kWh sales for RPP customers vs.
- 2 non-RPP customers are known. All changes are recorded in the general ledger.

3

- 4 Final true-up between 1588 and 1589 will be completed up to and as at May 31 of each
- 5 subsequent year for the previous calendar year. Final reviews for 2018 were completed and
- 6 reported as part of Hydro Ottawa's 2020 annual rate adjustment application. As part of the
- 7 updates to this Application for 2019 actuals, Hydro Ottawa has included balances to the end of
- 8 2019 with final true-up to April 30, 2020 (incorporating a final true-up that will be included in the
- 9 April month-end IESO submission).

10

- 11 Hydro Ottawa bills its Class A customers the amount the utility pays for Class A global
- 12 adjustment.

13

- 14 Hydro Ottawa has no embedded distributors in its service territory. Wholesale metered
- 15 customers are billed directly from the IESO. Hydro Ottawa submits kWh to the IESO for
- 16 embedded generation within its service territory.

17

- 18 Hydro Ottawa calculates and maintains both GA Retail Settlement Variance Accounts ("RSVAs")
- 19 for Class A and Class B separately in Sub-Accounts of Account 1589.

20

21 4. CERTIFICATION OF EVIDENCE

- 22 As per the Chapter 2 Filing Requirements for Electricity Distribution Rate Applications, as
- 23 updated on July 12, 2018 and addended on July 15, 2019, Hydro Ottawa's Chief Financial
- 24 Officer hereby certifies that the utility maintains robust processes and internal controls for the
- 25 preparation, review, verification, and oversight of Account 1588 RSVA Power and Account
- 26 1589 RSVA Global Adjustment.

UPDATED GROUP 2 ACCOUNTS

2

1

3 1. INTRODUCTION

- 4 As per the OEB's report on the Electricity Distributors' Deferral and Variance Account Review
- 5 Initiative1 ("EDDVAR Report"), Group 2 Accounts include deferral and variance accounts
- 6 ("DVAs") that require a prudency review by the OEB. Please see Table 2 in UPDATED Exhibit
- 7 9-1-1: Summary of Current Deferral and Variance Accounts for a list of Hydro Ottawa's active
- 8 Group 2 DVAs.

9

10 This Schedule discusses Group 2 Accounts, with the exception of the following:

11

- Account 1592 (for details, please see <u>UPDATED</u> Exhibit 9-1-4: Account 1592 PILS and
 Tax Variance);
- Accounts 1518 and Account 1548 (for details, please see Exhibit 9-1-5: Retail Service
 Charges); and
 - 1568 Lost Revenue Adjustment Mechanism ("LRAM") Variance Account (for details, please see <u>UPDATED</u> Exhibit 4-5-2: LRAM Variance Account).

18

16

17

- 19 More information on the disposition of these accounts is available in **UPDATED** Exhibit 9-3-1:
- 20 Disposition of Deferral and Variance Accounts.

21

22 2. DVAs EFFECTIVE PRIOR TO JANUARY 1, 2016

- 23 This section provides an overview of Group 2 Accounts that were effective prior to the beginning
- 24 of Hydro Ottawa's current five-year rate term (i.e. prior to January 1, 2016).

Ontario Energy Board, Report of the Board on Electricity Distributors' Deferral and Variance Account Review Initiative (EDDVAR), EB-2008-0046 (July 31, 2009).

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 **UPDATED** May 5, 2020 Page 2 of 28

1 **2.1**. **ENERGY EAST - TRANS CANADA PIPELINE**

- 2 A Sub-Account to Uniform System of Accounts ("USofA") 1508 was added for the Energy East
- 3 TransCanada Pipeline in Hydro Ottawa's 2016 rebasing application.² This deferral Account was
- 4 set-up to capture costs associated with consultations regarding TransCanada Pipeline Limited's
- 5 proposed Energy East pipeline project. In a letter dated April 15, 2014, the OEB advised that a
- 6 portion of the costs associated with consultations regarding TransCanada's Energy East project
- 7 would be recovered from all entities which are subject to the OEB's cost assessment under
- 8 section 26 of the Ontario Energy Board Act, 1998.3

9

- 10 Hydro Ottawa has set-up the deferral Account, as per the instructions set forth in a separate
- 11 OEB letter issued June 13, 2014.4 Furthermore, consistent with the OEB's guidance, Hydro
- Ottawa has maintained this deferral Account as a Group 2 Account and disposition is occurring
- in conjunction with a rebasing application. In addition, Hydro Ottawa has applied carrying
- 14 charges to this account.5

15

- 16 Hydro Ottawa is proposing to dispose of this Sub-Account on a final basis in this Application and
- 17 to discontinue use of this Account following adjudication of the Application.

18

19 2.2. **P&OPEB Deferral Account**

- 20 Sub-Account 1508 Other Regulatory Assets Other Post-Employment Benefits ("OPEB")
- 21 Deferral Account is used to record cumulative actuarial gains or losses in Hydro Ottawa's
- 22 post-retirement benefits. This Account was originally approved in Hydro Ottawa's 2012 rate
- 23 application.⁶

9

10

11

1213

16 3.1. Y FACTOR VARIANCE ACCOUNT

HydroOttawa

The Y Factor Account was established to recover the revenue requirement associated with the construction of the new South Operations and Warehouse facility and the new East Operations and Administrative Campus facility and related land ("New Facilities"). As set out in the Approved Settlement Agreement, the cost of the New Facilities up to \$66.0M was to be recorded into rate base once the New Facilities were placed into service.

22

The Y Factor Account was also intended to capture the Existing Facilities' revenue requirement when they were taken out of service. Per the Approved Settlement Agreement, the Existing Facilities were to be removed from rate base in the same calendar year as the New Facilities were placed in service, or when the Existing Facilities were sold, whichever occurred first.

27

The New Facilities were put into service in May 2019. The Existing Facilities, with the exception of Bank Street, were removed from service in 2019. Due to changes in the Facilities Renewal

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 5 of 28

1 Program, the Bank Street facility is being kept and remains part of Hydro Ottawa's rate base.

2 For further details, please refer to **UPDATED** Attachment 2-1-1(A): New Administrative Office

3 and Operations Facilities.

4

5 Hydro Ottawa received approval for an interim rate rider as part of its 2020 rate adjustment

6 application to clear the net impact of adding the revenue requirement of the New Facilities and

7 the removal of the revenue requirement of the Existing Facilities.9 Preliminary New Facilities

costs were used to calculate the revenue requirement of the New Facilities. An estimate of the

9 final sale date of the Existing Facilities was used to calculate the return of revenue requirement

orelated to the Existing Facilities. As part of this Application, Hydro Ottawa is requesting the

11 true-up amount related to the Y Factor Account.

12

3 As per the Approved Settlement Agreement, the 2019 and 2020 revenue requirement will be

14 trued-up for final costs. 10 The preliminary estimate of \$66.0M rate base was derived from the

15 estimated total cost of the New Facilities, after the removal of the \$15.0M approved portion for

6 land, based on estimated amounts by component. In turn, depreciation and taxes were

17 calculated based on this component allocation.

18

9 Hydro Ottawa has incorporated the New Facilities' full cost into the 2021 revenue requirement

20 proposed in **UPDATED** Exhibit 6-1-1: Calculation of Revenue Deficiency or Sufficiency.

1 Therefore, no amounts are being recorded in the Y Factor account after 2020.

22

23 As requested by the OEB during the adjudication of Hydro Ottawa's 2020 rate adjustment

24 application, any impact of Bill C-97 has not been included in the Y Factor Account. 11 Please see

25 UPDATED Exhibit 9-1-4: Account 1592 PILS and Tax Variance for further details on Bill C-97

26 and its impacts.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 9 of 28

- 1 The true-up revenue requirement related to the Y Factor Account has been included in the
- 2 adjustments column of **UPDATED** Attachment 9-1-1(A): OEB Workform Deferral and Variance
- 3 Account (Continuity Schedule) in order to dispose of the amount as part of this Application.

4

5 3.2. NEW FACILITIES DEFERRAL ACCOUNT

- 6 The New Facilities Account was established to record the revenue requirement impacts of the
- 7 costs of the New Facilities and related land that are above \$66.0M. Any amount recorded into
- 8 this account is subject to a prudency review.

9

- 10 Hydro Ottawa started recording the revenue requirement impact of amounts above \$66.0M in
- 11 2019. The amount recorded into this account was based on the total estimated cost of the New
- 12 Facilities and then the removal of the revenue requirement presented in Table 1 as updated
- 13 above for the amount up to the cost of \$66.0M.

14

- 15 The updated version of Table 3 below provides the revenue requirement impact of the New
- 16 Facilities above the Y Factor amount of \$66.0M for 2019 and 2020. Thereafter, the updated
- 17 version of Table 4 below provides the total revenue requirement impact of the New Facilities for
- 18 2019 and 2020.

19

- 20 Hydro Ottawa has incorporated the New Facilities' full cost into the 2021 revenue requirement
- 21 proposed in **UPDATED** Exhibit 6-1-1: Calculation of Revenue Deficiency or Sufficiency.
- 22 Therefore, no amounts are being recorded into this Regulatory Account after 2020.

- 24 As noted above, as requested by the OEB during the adjudication of Hydro Ottawa's 2020 rate
- 25 adjustment application, any impact of Bill C-97 has not been included in this New Facilities
- 26 Deferral Account. Please see UPDATED Exhibit 9-1-4: Account 1592 PILS and Tax Variance for
- 27 further details on Bill C-97 and its impacts.

4

11

21

23

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 15 of 28

- 1 With updates for 2019 actuals, the total gain of \$2.2M has been included in the 2019
- 2 transactions column BD of UPDATED Attachment 9-1-1(A): OEB Workform Deferral and
- 3 Variance Account (Continuity Schedule) in order to dispose of the amount back to customers.

5 3.2.2.1. Gain for Tax Purposes & Replacement Property Rules

- 6 Canada's Income Tax Act ("ITA") allows taxpayers to elect to defer the recognition of a capital
- 7 gain where a former business property was voluntarily disposed of and a replacement property
- 8 is acquired. When the applicable tax conditions are met, these rules (commonly known as the
- 9 Replacement Property rules) generally allow taxpayers to replace certain property without
- 10 incurring immediate tax consequences.

In 2019, Hydro Ottawa voluntarily disposed of the Existing Facilities (Albion and Merivale) and replaced them with the New Facilities. The ITA therefore permits Hydro Ottawa to use the Replacement Property rules to defer the capital gain on the sale of the land and buildings of the Existing Facilities. Specifically, the calculated capital gain on the sale of land and buildings of the Existing Facilities reduces the additions of the New Facilities. Instead of recognizing a capital gain and paying tax on that capital gain, as part of its original Application Hydro Ottawa has reduced the additions to Class 1.3 of the New Facilities by the approximate gain for tax purposes of \$8.0M in 2019. After accounting for 2019 actuals, Hydro Ottawa has used the

22 As a result, there is no tax adjustment to the gain being returned to customers.

actual gain of \$7.9M to reduce the additions to Class 1.3.

24 3.3. GAINS AND LOSSES ON DISPOSAL OF FIXED ASSETS VARIANCE ACCOUNT

- 25 The purpose of this Account is to record the difference between the forecast and actual gain or
- 26 loss on the disposal of fixed assets, related to retirement of assets or damage to plant (including
- 27 storm-related costs). Examples include losses on meters, station equipment, poles, and

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 16 of 28

1 vehicles. The forecasted amount in Hydro Ottawa's 2016-2020 Custom IR Application was a

2 gain of \$198,349.43

3

4 Damage costs related to storms are unpredictable as climate change is causing extreme

5 weather events with increased frequency which are outside of Hydro Ottawa's control. These

6 events (e.g. freezing rain, high wind, temperature and precipitation extremes, tornadoes, etc.)

7 have the ability to cause extensive damage to assets of various life spans. Accordingly, this

8 Account includes the difference between the original estimate of damage to plant and the actual

9 cost of damage to plant, as a result of severe weather events. For further details on the

10 increased frequency of extreme weather events in the Ottawa region, please see Attachment

11 2-4-3(H): Distribution System Climate Risk and Vulnerability Assessment and Attachment

12 2-4-3(I): Hydro Ottawa Climate Change Adaptation Plan.

13

14 Balances related to this Account can be viewed in the updated version of Table 6 and in

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 18 of 28

1

The regulatory net income for the purpose of earnings sharing is to be calculated in the same manner as net income for regulatory purposes under the Reporting and Record Keeping Requirements ("RRR") filings. This will exclude revenue and expenses that are not otherwise

5 included for regulatory purposes, such as settlement of any regulatory assets or regulatory

6 liabilities, including the LRAM and changes in taxes/Payments in Lieu of Taxes ("PILS") to which

7 the USofA 1592 – PILS and Tax Variance for 2006 and Subsequent Years applies.

8

9 Balances related to this Account can be viewed in **UPDATED** Attachment 9-1-1(A): OEB

10 Workform - Deferral and Variance Account (Continuity Schedule). The updated version of Table

11 8 provides calculations for the amounts recorded.

3 In its original Application, Hydro Ottawa indicated that the utility will provide an update to the

- 4 ESM Account as part of its planned update on DVAs for 2019 Actuals at a later stage in this
- 5 proceeding. This update is provided by way of the updates to Table 8 above, including the 2018
- 6 ESM as calculated with current LRAM calculations. As Hydro Ottawa did not overearn in 2018,
- 7 no ESM was recorded.

8

9 3.5. CONNECTION COST RECOVERY AGREEMENT PAYMENTS DEFERRAL ACCOUNT

- 10 As part of Hydro Ottawa's 2016-2020 application, \$5.0M of unidentified CCRA payments to
- 11 HONI were estimated per year. During the adjudication of the 2016-2020 application, it was

^{12 55 &}quot;Current year" means 2016 for the purposes of the column with information for 2016, and 2017 for the purposes of

the column with information for 2017.

the column with information for 2017.

Previous years' LRAM includes adjustment to any year not related to the current year.

^{15 &}lt;sup>57</sup> Current year LRAM includes adjustments in reporting years subsequent to the current year.

^{16 58} Tax rate = 26.5%.

 $^{^{59}}$ Tax rate = 26.5%.

⁶⁰ Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 21 of 28

agreed to move the unidentified payments out of the proposed revenue requirement and establish the CCRA Regulatory Account. The CCRA Regulatory Account allows Hydro Ottawa to record, and later recover from customers, the annual revenue requirement of CCRA payments that commence in the year in which the facilities (to which each CCRA payment relates) provide services to Hydro Ottawa customers.

6

- 7 Hydro Ottawa recorded the revenue requirement related to eligible projects in 2017 and 2018.
- 8 No revenue requirement was recorded in 2016. Please see the updated version of Table 9
- 9 below for the calculation of the revenue requirement.

10

- 11 Hydro Ottawa has used the new Capital Cost Allowance ("CCA") Class 14.1 rules for eligible
- 12 capital property effective January 1, 2017 for the PILS calculation. As per OEB guidance, any
- 13 impact of Bill C-97 is being recorded into a Sub-Account of 1592. Please see UPDATED Exhibit
- 14 9-1-4: Account 1592 PILs and Tax Variance for further details.

- 16 In addition, it should be noted that the amount in Table 9 below (as originally submitted) does
- 17 not equal what is shown in the completed continuity schedule in Attachment 9-1-1(A): OEB
- 18 Workform Deferral and Variance Account (Continuity Schedule) as an adjustment in 2019 will
- 19 result in the amounts balancing at year-end 2019. <mark>In the updated version of Table 9, the</mark>
- 20 cumulative balance equals the cumulative balance in the completed continuity schedule in
- 21 UPDATED Attachment 9-1-1(A): OEB Workform Deferral and Variance Account (Continuity
- 22 Schedule). Hydro Ottawa is seeking to clear this balance as part of this Application.

3 3.6. REVENUE REQUIREMENT VARIANCE ACCOUNT RELATED TO CAPITAL 4 ADDITIONS

- 5 The purpose of this Account is to track revenue requirement impacts resulting from any
- 6 underspending in Hydro Ottawa's three capital spending categories: System Renewal/System

67 Ibid.

⁶⁵ Hydro Ottawa used approved yearly Cost of Capital parameters (please see **UPDATED** Exhibit 5-1-1: Cost of Capital and Capital Structure).

⁶⁶ İbid.

⁶⁸ Totals may not match due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 **UPDATED** May 5, 2020 Page 24 of 28

1 Service, System Access, and General Plant. 69 The Account is computed and tracked on an

2 annual basis and calculated on a cumulative basis. If overspending occurs, no amount will be

recorded into this Account.

4

5 For the years 2016-2018, Hydro Ottawa spent more than planned in each of the three spending

categories. As a result, no amount has been recorded into this variance account. The utility had

7 indicated in its original Application that it will provide an update to this Account as part of the

update of DVAs for 2019 Actuals that is planned at a later point in this proceeding. Hydro

Ottawa hereby confirms that the utility also spent more than planned in 2019.

10

EFFICIENCY ADJUSTMENT MECHANISM DEFERRAL ACCOUNT 3.7.

This Account was established to provide ratepayers a credit should Hydro Ottawa's efficiency ranking decline during any year of the Custom IR term. The year 2014 is the starting efficiency

ranking point. Hydro Ottawa will not benefit from moving into a more efficient cohort except to

mitigate future adjustments. A detailed example is provided as part of the Approved Settlement

Agreement. 16

17

2019 is the third year for which the efficiency adjustment mechanism ("EAM") assessment was

to be performed. As per the Approved Settlement Agreement, Hydro Ottawa is to calculate the

efficiency adjustment based on the "current year ending point stretch factor." As such, Hydro

Ottawa used the efficiency ranking as determined by the OEB for 2019 rates, which was

22 released on August 15, 2019, for purposes of calculating the impact on its 2018 Revenue

23 Requirement.⁷⁰ Table 10 below provides the EAM calculation.

²⁴ ⁶⁹ The System Renewal and System Service categories have been merged into one category to reflect Hydro

²⁵ Ottawa's standard operating practice to shift funds between the two categories, as warranted by customer and

operational requirements.

Ontario Energy Board, *Incentive Rate Setting: 2018 Benchmarking Update for Determination of 2019 Stretch*

²⁸ Factor Rankings, EB-2010-0379 (August 15, 2019), pages 1-2.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 **UPDATED** May 5, 2020 Page 25 of 28

1 In its original Application, Hydro Ottawa indicated that the utility will include the 2019 amount as

part of the planned updates of DVAs for 2019 Actuals at a later stage in this proceeding. Please

see UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account

(Continuity Schedule) for further information.

2014 Starting Point - Cohort 3	(0.30%)	(0.30%)	(0.30%)
Ending Point - Cohort 4	$(0.45\%)^{71}$	$(0.45\%)^{72}$	$(0.45\%)^{73}$
% Change	0.15%	0.15%	0.15%
Service Revenue Requirement	\$182,069,831	\$190,594,484	\$196,781,803
EAM	\$273,105	\$285,892	\$295,173

7

8 Hydro Ottawa will report any 2020 EAM as part of its 2022 rate adjustment application.

9

POLE ATTACHMENT CHARGE REVENUES VARIANCE ACCOUNT 10 3.8.

The Pole Attachment Account was established to collect the difference between the \$57.00 pole attachment rate that Hydro Ottawa's distribution revenue was based on in 2016 and the \$53.00 rate from the Pole Attachment Decision.74 As directed by the Pole Attachment Decision and as approved in the adjudication of Hydro Ottawa's 2017 rate adjustment application, this difference 15 was collected as part of the implementation of the utility's 2017 rates. Starting in 2017, Hydro 16 Ottawa's base revenue was adjusted by the Pole Attachment Decision. No further amounts will be recorded into this Account; as such, the discontinuance of this Account is proposed in this 18 Application.

^{19 71} Ontario Energy Board, Incentive Rate Setting: 2016 Benchmarking Update for Determination of 2017 Stretch

Factor Rankings, EB-2010-0379 (August 17, 2017), pages 1-2.

1 3.9. WIRELESS ATTACHMENT REVENUES DEFERRAL ACCOUNT

- 2 The Wireless Attachment Revenues Deferral Account was established to credit ratepayers with
- 3 revenues earned from wireless attachments for the period 2016-2020.

4

- 5 No revenue has been recorded into this Account. Accordingly, Hydro Ottawa proposes to
- 6 discontinue the use of this Account.

7

8 4. NEW DVAs EFFECTIVE AFTER JANUARY 1, 2016

- 9 This section discusses the DVAs that were (i) established by the OEB, (ii) made effective after
- 10 January 1, 2016, and (iii) not part of the Approved Settlement Agreement governing Hydro
- 11 Ottawa's 2016-2020 rate term.

12

13 4.1. OEB COST ASSESSMENT VARIANCE

- 14 As per the OEB's revisions to the Cost Assessment Model, the OEB established Account 1508
- 15 Other Regulatory Assets Sub-Account OEB Cost Assessment Variance for electricity
- 16 distributors to record any material differences between OEB cost assessments that were built into
- 17 rates at the time of the issuance of the OEB's revisions, and cost assessments that would result
- 18 from the application of the new Cost Assessment Model effective April 1, 2016.75 Hydro Ottawa is
- 19 using this Sub-Account. Please see <mark>UPDATED</mark> Exhibit 4-2-4: Regulatory Costs for further
- 20 information.

21

22 4.2. REGULATORY TREATMENT OF PENSION AND OTHER POST-EMPLOYMENT 23 BENEFITS

- On September 14, 2017, the OEB issued its final report on the regulatory treatment of pension
- 25 and OPEB costs establishing the use of accrual accounting as the default method on which to
- 26 set rates for pension and OPEB amounts in cost-based applications.⁷⁶ Moreover, this report also
- 27 provides for the establishment of a variance account, Account 1522, to track the difference

⁷⁵ Ontario Energy Board, Letter re: *Revisions to the Ontario Energy Board Cost Assessment Model* (February 9, 2016).

²⁸ Ontario Energy Board, Report of the Ontario Energy Board - Regulatory Treatment of Pension and Other

²⁹ Post-Employment Benefits Costs, EB-2015-0040 (September 14, 2017).

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 27 of 28

1 between the forecasted accrual amount in rates and actual cash payment(s) made, with an

2 asymmetric carrying charge in favour of ratepayers applied to the differential.

3

4 Hydro Ottawa provides pension benefits for its employees through the Ontario Municipal

5 Employees Retirement System ("OMERS") Fund (the "Fund"). Although the plan is a defined

6 benefit plan, sufficient information is not available to Hydro Ottawa to account for it as such,

7 because it is not possible to attribute the fund assets and liabilities between the various

employers who contribute to the Fund. As a result, Hydro Ottawa accounts for the plan as a

9 defined contribution plan. Contributions payable as a result of employee service are expensed

10 as incurred similar to short-term employee benefits.

11

Hydro Ottawa also provides other post-employment benefits such as life insurance and a retirement grant. These plans provide benefits to certain employees when they are no longer providing active service to the utility. Other post-employment benefits are recorded on an accrual basis. The accrued benefit obligation and current service costs are calculated using the projected benefit method prorated on service and based on assumptions that reflect Hydro Ottawa's best estimates. The utility tracks the difference between the forecast accrual amount in

rates and actual cash payments in a variance account, as set out in the OEB report.

18 19

Hydro Ottawa confirms that it is recording amounts into the tracking account for the purpose of recording carrying charges. The utility further confirms that carrying charges are being calculated using the OEB-prescribed Construction Work in Progress ("CWIP") rate.

23

24 **4.3.** REGULATORY ASSETS FOR RETAIL SERVICE CHARGES INCREMENTAL 25 REVENUE

As part of the Approved Settlement Agreement, Hydro Ottawa received approval for utility-specific Retail Service Charges ("RSCs"). Subsequently, on November 29, 2018, the OEB issued a Report

28 on Energy Retailer Services Charges, which stated that updated RSCs would be established and

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 3 **UPDATED** May 5, 2020 Page 28 of 28

1 applied to all electricity distributors. 77 The report specifically indicated that the updated RSCs

2 would apply to Hydro Ottawa. The Decision and Rate Order for the new RSCs had an effective

3 date of May 1, 2019.78 The OEB issued a Decision and Rate Order on November 28, 2019 with

4 updated rates for RSCs effective January 1, 2020.79

5

6 As per the OEB's Decision and Order regarding energy retailer service charges, Hydro Ottawa is

7 recording the difference between revenues collected at the previously approved charges and the

8 revenue collected based on the charges established pursuant to the OEB report.80 As Hydro

9 Ottawa has discontinued recording amounts into the Retail Cost and Variance Accounts

("RCVAs") 1518 and 1548, consistent with OEB direction, the utility has set up a sub-account

under 1508 Other Regulatory Assets for Retail Service Charges Incremental Revenue.

12

13 4.4. REGULATORY ASSET FOR ACCOUNT 1509 - IMPACTS ARISING FROM THE **COVID-19 EMERGENCY** 14

15 On March 25, 2020, the OEB issued an accounting order for the establishment of deferral accounts to record impacts arising from the COVID-19 Emergency.81 The OEB established Account 1509 - Impacts Arising from the COVID-19 Emergency, which includes three sub-accounts. The sub-accounts are for costs associated with billing and system changes related to the Government of Ontario's emergency order regarding time-of-use pricing,82 lost revenue. and other incremental costs. Hydro Ottawa intends to open these new 1509 sub-accounts, as per

21 this OEB accounting order.

UPDATED ACCOUNT 1592 PILS AND TAX VARIANCE

2

1

3 1. INTRODUCTION

Account 1592 per the Accounting Procedures Handbook for Electricity Distributors ("APH") is used to record the tax impact of differences related to legislative or regulatory changes to tax rates or rules or disclosure of a new assessing or administrative policy published by federal or 7 provincial public tax bulletins.¹

8

For further information on the Payments in Lieu of Taxes ("PILS") impact related to utility-specific Regulatory Assets which are unrelated to changes defined as part of Account 1592 per the APH (e.g. the Earnings Sharing Mechanism), please refer to **UPDATED** Exhibit 9-1-3: Group 2 Accounts.

13

PILS ACCELERATED INVESTMENT INCENTIVE 14 **2**.

Bill C-97, also known as the Budget Implementation Act, 2019, was passed by the Parliament of Canada and received Royal Assent in June 2019. The legislation provides for accelerated Capital Cost Allowance ("CCA") deductions for eligible property available for use and acquired after November 20, 2018. The OEB released guidance on July 25, 2019 which instructed utilities to record 100% of the rule change in a Sub-Account of 1592 - PILs and Tax Variances -CCA Changes. The guidance states that "[t]he OEB therefore expects that all Utilities will record the full revenue requirement impact of any changes in CCA rules that are not reflected in base 22 rates."2

23

24 As directed, Hydro Ottawa has recorded the impact of the legislative change for 2018-2020 in

25 Sub-Account 1592 - PILs and Tax Variances - CCA Changes.³ The change in revenue

26 requirement reflected in base rates for 2018-2020 on account of accelerated CCA is

²⁷ Ontario Energy Board, *Accounting Procedures Handbook for Electricity Distributors* (December 2011)., pages

<sup>28 75-76.
29</sup> Ontario Energy Board, Letter re: Accounting Direction Regarding Bill C-97 and Other Changes in Regulatory or October 1997 (1997), page 2.

³⁰ Legislated Tax Rules for Capital Cost Allowance (July 25, 2019), page 2.
31 The amounts recorded in relation to accelerated CCA are unaudited at this time.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 2 of 7

- 1 summarized in Table 1 below. Originally, it was estimated that 100% of additions in 2019 and
- 2 2020 would qualify for accelerated CCA. Table 1 has been updated to reflect remeasurements
- 3 of 2019 and 2020 additions that would qualify for accelerated CCA. The percentages in Table 4
- 4 below were used to calculate the 2019 and 2020 additions that would qualify for accelerated

5 CCA.

6

9

4 For the 2019 and 2020 accelerated CCA calculations related to the new facilities, please refer to the following UPDATED Attachments:

• UPDATED Attachment 9-1-4(F): 2019 Accelerated Capital Cost Allowance - New Facilities \$66M

 UPDATED Attachment 9-1-4(G): 2019 Accelerated Capital Cost Allowance - New Facilities \$99.5M

 UPDATED Attachment 9-1-4(H): 2020 Accelerated Capital Cost Allowance - New Facilities \$66M

• UPDATED Attachment 9-1-4(I): 2020 Accelerated Capital Cost Allowance - New Facilities \$99.5M

15
16 Table 3 below provides the change in CCA (due to accelerated CCA) related to the Connection

17 Cost Recovery Agreement ("CCRA") Payments Deferral Account for 2019 and 2020. There

were no qualifying CCRA payments made in 2018. Please see **UPDATED** Exhibit 9-1-3: Group

19 2 Accounts for more information related to this Regulatory Account.

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 5 of 7

As noted above, it was originally estimated that 100% of CCRA additions in 2019 and 2020 would qualify for accelerated CCA. Table 3 has been updated to reflect remeasurements of 2019 and 2020 additions that would qualify for accelerated CCA. The percentages in Table 4 below were used to calculate the 2019 and 2020 CCRA additions that would qualify for accelerated CCA. The 2019 percentages were determined based on when CCRA additions became available for use in 2019 and when these 2019 CCRA additions were paid for. The 2020 percentages were determined based on when forecasted CCRA additions would become available for use in 2020 and when these 2020 forecasted CCRA additions were/would be paid for.

10

1 3. PROPOSED DISPOSAL TREATMENT

Hydro Ottawa proposes to clear 100% of the 2018-2020 balances related to the revenue requirement impact to customers due to accelerated CCA as part of this Application, with the exception of the CCRA Account. The amounts provided in this Schedule related to CCRA payments are based on estimates. As a result, Hydro Ottawa proposes to clear the impact of accelerated CCA related to CCRA on audited balances per the typical Group 2 disposal process. Please refer to UPDATED Exhibit 9-3-1: Disposition of Deferral and Variance Accounts for further details, including information related to Hydro Ottawa's proposed Regulatory Account disposals.

10

Accelerated CCA impacts related to Hydro Ottawa's utility-specific Regulatory Assets that record revenue requirements which are not included in 2016-2020 base rates are not part of the revenue requirement calculations which are included in the accelerated CCA Sub-Account of 1592. Specifically, these utility-specific accounts are Y Factor Variance Account - Existing Facilities, New Facilities Deferral Account, and CCRA Payments Account. Please refer to UPDATED Exhibit 9-1-3: Group 2 Accounts for additional details.

17

In addition, for an explanation as to why the Sub-Account of 1592 - PILs and Tax Variances - CCA Changes does not balance with Hydro Ottawa's 2018 Reporting and Record Keeping Requirements ("RRR") filings, please see UPDATED Exhibit 9-1-1: Summary of Current Deferral

21 and Variance Accounts.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 7 of 7

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 1 of 17

UPDATED DISPOSITION OF DEFERRAL AND VARIANCE ACCOUNTS

2

1

3 1. INTRODUCTION

- 4 In this Schedule, Hydro Ottawa is requesting disposition of a number of its Group 2 deferral and
- 5 variance accounts ("DVAs"), in compliance with the Electricity Distributors' Deferral and
- 6 Variance Account Review Initiative ("EDDVAR Report").

7

Details regarding DVAs can be found in the following Exhibits:

9

10

- UPDATED Exhibit 9-1-1: Summary of Current Deferral and Variance Accounts
- **UPDATED** Exhibit 9-1-2: Group 1 Accounts
- **UPDATED** Exhibit 9-1-3: Group 2 Accounts
 - UPDATED Exhibit 9-1-4: Account 1592 PILS and Tax Variance
- Exhibit 9-1-5: Retail Service Charges

15

- 16 In UPDATED Attachment 9-3-1(C): OEB Workform Account 1595, Hydro Ottawa has included
- 17 the 1595 Accounts that have not been cleared as part of prior rate applications. As part of the
- 18 proceeding for this Application, Hydro Ottawa will update the 1595 Workform model for 2019
- 19 actuals. Hydro Ottawa confirms that it has updated the 1595 Workform model for 2019 actuals,
- 20 and has also modified it in order to add a tab for 1595 Sub-Account 2018. The 1595
- 21 Sub-Accounts for all years 2016, 2017, and 2018 have been updated with 2019 actuals in
- 22 UPDATED Attachment 9-3-1(C): OEB Workform Account 1595.

23

24 2. ACCOUNTS FOR WHICH HYDRO OTTAWA IS SEEKING DISPOSITION

- 25 As part of this Application, Hydro Ottawa is requesting disposition of its Group 2 Accounts as
- 26 presented in Attachment 9-1-1(A): OEB Workform Deferral and Variance Account (Continuity
- 27 Schedule) based on December 31, 2018 audited balances and specific adjustments for 2019.
- 28 After accounting for 2019 actuals, Hydro Ottawa is requesting disposition of its Group 2
- 29 Accounts as presented in UPDATED Attachment 9-1-1(A): OEB Workform Deferral and

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 2 of 17

1 Variance Account (Continuity Schedule) based on December 31, 2019 audited balances and

2 specific adjustments for 2019 and 2020. Please refer to UPDATED Exhibit 9-1-3: Group 2

3 Accounts and UPDATED Exhibit 9-1-4: Account 1592 PILS and Tax Variance for more

4 information on the specific adjustments.

5

6 Hydro Ottawa has made a Principal Adjustment in the Other Post-Employment Benefits

7 ("OPEB") 1508 Sub-Account. This adjustment is to return these funds to customers, as they

8 were inadvertently included as a charge to customers as part of the Group 2 disposition

associated with the OEB's Decision and Order on Hydro Ottawa's 2016 rebasing application.¹

10 Please refer to cell BT53 of tab 2b. 2017 Continuity Schedule of UPDATED Attachment

9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule) for the total

12 Claim amount of \$(4.4M).

13

14 As submitted in the utility's original Application, Hydro Ottawa's last audited Group 1 balances

15 for the 2018 year-end are being cleared as part of the implementation of the utility's 2020 rates.²

16 When 2019 audited balances are available, Hydro Ottawa will update Attachment 9-1-1(A): OEB

17 Workform - Deferral and Variance Account (Continuity Schedule) and update the requested

18 disposition of Group 1 and Group 2 Accounts. With updates that include 2019 audited balances,

Hydro Ottawa has updated the proposed disposition of Group 1 and Group 2 Accounts. Please

o refer to the UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account

21 (Continuity Schedule).

22

3 The updated version of Table 1 below provides a summary of the Group 2 DVAs by Uniform

24 System of Accounts ("USofA") for which Hydro Ottawa is seeking disposition. For the completed

25 DVA Continuity Schedule, please see **UPDATED** Attachment 9-1-1(A): OEB Workform - Deferral

26 and Variance Account (Continuity Schedule).

27

²⁸ Ontario Energy Board, Decision and Rate Order, EB-2015-0004 (December 22, 2015).

²⁹ Ontario Energy Board, *Decision and Rate Order*, EB-2019-0046 (December 17, 2019), page 13.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 3 of 17

- 1 Per the DVA Continuity Schedule, principal balances are up to December 31, 2018 and interest
- 2 is forecasted to December 31, 2019. After accounting for 2019 actuals, principal balances are
- 3 up to December 31, 2019 and interest is forecasted to December 31, 2020. In addition, as noted
- 4 above, Hydro Ottawa has included specific adjustments related to 2019 and 2020, as follows:

5

6

7

8

10

11

12 13

- USofA 1508 Sub-account Y-Factor Variance Account
- USofA 1508 Sub-account Gains/Losses from Sale of Existing Facilities Deferral (only as originally submitted)
- USofA 1508 Sub-account New Facilities Deferral Account
 - USofA 1592 Sub-account PILS and Tax Variance for 2006 and Subsequent Years
 Sub-account CCA Changes
 - USofA 1568 Sub-account LRAM Variance Account
 - USofA 1508 Pension & Other Post-Employment Benefits ("OPEB")

14

- 15 The total net credit balance of the Group 2 DVAs for which Hydro Ottawa is seeking disposition
- 16 is \$5.8M, as originally submitted.

17

- After accounting for 2019 actuals, the total net credit balance of Group 1 and Group 2 DVAs for
- 19 which Hydro Ottawa is seeking disposition is \$6.7M.

20

- 21 As part of this Application (as originally submitted), Hydro Ottawa has provided the Global
- 22 Adjustment ("GA") Analysis Workform and GA Appendix A from its 2020 rate adjustment
- 23 application³, as the utility is using the 2018 audited financials in Attachment 9-1-1(A): 2021 DVA
- 24 Workform. These are included in this Application as Attachment 9-3-1(A): OEB Workform -
- 25 Global Adjustment Analysis and Attachment 9-3-1(B): OEB Workform Appendix Global
- 26 Adjustment Analysis. Hydro Ottawa will provide updated Attachments based on 2019 audited
- 27 financials at a later point in this proceeding.

²⁹ ³ Hydro Ottawa Limited, *2020 Electricity Distribution Rate Application*, EB-2019-0046 (August 12, 2019).

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 4 of 17

- 1 After accounting for 2019 actuals, Hydro Ottawa is providing the Global Adjustment ("GA")
- 2 Analysis Workform and GA Appendix A using data from the 2019 audited financial statements.
- 3 These are included as UPDATED Attachment 9-3-1(A): OEB Workform Global Adjustment
- 4 Analysis and UPDATED Attachment 9-3-1(B): OEB Workform Appendix Global Adjustment
- 5 Analysis.

6

- 7 Hydro Ottawa is proposing not to dispose of Sub-Account 1508 OEB Rate Application
- 8 Deferral Account in the UPDATED Attachment 9-1-1(A): OEB Workform Deferral and Variance
- 9 Account (Continuity Schedule), as these fees are being amortized with Operations,
- Maintenance and Administration ("OM&A"), as per UPDATED Exhibit 4-2-4: Regulatory Costs,
- and thus are not included in the updated version of Table 1 below.

12

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 5 of 17

2 3. ALLOCATION OF DVAs AND LENGTH OF DISPOSITION PERIOD

- 3 Hydro Ottawa is requesting a two-year rate rider for the refund of balances proposed for the
- 4 Group 2 disposition (without LRAM). In addition, Hydro Ottawa is requesting disposition of the
- 5 Group 1 Rate Rider for Deferral/Variance Accounts over two years. This helps facilitate a more
- 6 levelized rate impact between the 2021-2023 rate years.

7

1

- 8 As originally submitted, Hydro Ottawa is proposing to dispose of the LRAM rate rider over a
- 9 one-year period. This adheres to the default disposition period. After accounting for 2019
- actuals, Hydro Ottawa is proposing to dispose of the LRAM rate rider over a two-year period.

11

- 12 All Group 2 rate riders were allocated by 2021 distribution revenue, which is in line with how the
- 13 original revenue requirement was collected.

^{15 6} Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 9 of 17

- 1 As part of the updates to this Application accounting for 2019 actuals, the Facilities rate riders
- 2 were allocated by 2021 distribution revenue as per the Approved Settlement Agreement.

3

4 4. BILLING DETERMINANTS

Hydro Ottawa has used the 2021 and 2022⁷ Load Forecast billing determinants, as presented in UPDATED Exhibit 3-1-1: Load Forecast, for the calculation on the rate riders. Hydro Ottawa has utilized UPDATED Appendix 2-Z to allocate percentages for Non-Regulated Price Plan ("RPP") customers based on 2019 actuals, which can be found in UPDATED Attachments 2-3-1(A) through (E) for the 2021-2025 period, respectively. The Non-RPP percentage was then applied to the 2021 Load Forecast billing determinants. Wholesale Market Participants' consumption was determined by using final 2019 numbers and allocating the percentage of total consumption against the 2021 Load Forecast. Hydro Ottawa has allocated the 1595 Recovery Share Proportion for 2015 and 2016 by dividing the rate classes Load Forecast kWh by the total Load

15

14 Forecast kWh.

16 5. PROPOSED RATE RIDERS

As originally submitted, Hydro Ottawa provided Tables 2 through 4 below to outline proposed rate riders to clear the DVA balances in the Group 2 Accounts for which Hydro Ottawa is seeking disposition. As part of the updates for 2019 actuals, Hydro Ottawa has provided updated versions of Tables 2 through 4 below (along with newly-created Tables 5 through Table 8 below) to outline the proposed rate riders to clear the DVA balances in Group 1 and 2 Accounts for which Hydro Ottawa is seeking disposition.

- -

²³ This is with respect to the second year of the Group 2 rate rider.

3 6. GA AND WHOLESALE MARKET SERVICE CAPACITY BASED RECOVERY CLASS A

4 ADJUSTMENTS

5 As per the utility's original Application, Hydro Ottawa is not proposing GA and Wholesale Market

6 Service Capacity Based Recovery Class A adjustments at this time, as the 2018 balances were

7 addressed in Hydro Ottawa's 2020 rate application. Any required adjustments will be proposed

8 when the Application is updated for 2019 year-end balances.

9

As part of the updates to this Application to account for 2019 actuals, Hydro Ottawa has provided customer level consumption in UPDATED Attachment 9-1-1(A) in order to capture customer-specific impacts of transitioning Class A customers. The total amount allocated to Class A transitioning customers for GA is a charge of \$202,209. The total amount to be allocated to Class A transitioning customers for WMS CBR is being cleared through the general purpose Group 1 DVA rate rider. Hydro Ottawa proposes to apply the customer-specific Class A GA adjustments as a one-time adjustment rather than monthly adjustments. Unlike the use of rate riders, these adjustments are a manual process for Hydro Ottawa.

Hydro Ottawa Limited EB-2019-0261 Exhibit 9 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 17 of 17

1 7. PROPOSED ESTABLISHMENT OF NEW DVAs

- 2 Please see Exhibit 9-2-1: New Deferral and Variance Accounts for new accounts for which
- 3 approval is being sought as part of this Application.

Appendix A UPDATED GA Methodology Description Questions on Accounts 1588 & 1589¹

1. Please complete the Table below for principal adjustments on the DVA Continuity Schedule for Account 1588:

Reconciliation of Account 1588 - 2019

		Principal Adjustments	Was the amount a "Principal Adjustment" in the previous year? (Y/N)
	Balance December 31, 2019	\$1,227,760	
Rev	ersals of Principal Adjustments - previous year		
1.	Reversal of Cost of Power accrual from previous year	0	N
2.	Reversal of CT 1142 true-up from the previous year	\$10,635	Y
3.	Unbilled to billed adjustment for previous year	\$(182,878)	Y
4.	Reversal of RPP vs. Non-RPP allocation	\$829,307	Y
	Sub-Total Reversals from previous year (A):	\$657,064	
Prin	cipal Adjustments - current year		
5.	Cost of power accrual for <mark>2019</mark> vs Actual per IESO bill	\$169	N
6.	True-up of CT 1142 for 2019 consumption recorded in 2020		
	GL	\$(1,029,323)	N
7.	Unbilled accrued vs. billed for 2019 consumption	\$(24,835)	N
8.	True-up of RPP vs. Non-RPP allocation of CT 148 based on actual 2019 consumption	\$(87,644)	N
9.	Other		
	Sub-Total Principal Adjustments for 2019 consumption (B)	\$(1,141,632)	

¹In all references in the questions relating to amounts booked to accounts 1588 and 1589, amounts are not booked directly to accounts USoA 1588 and 1589 relating to power purchase transactions, but are rather booked to the cost of power USoA 4705 Power Purchased, and 4707, Charges – Global Adjustment, respectively. However, accounts 1588 and 1589 are impacted the same way as account 4705 and 4707 are for cost of power transactions.

Total Principal Adjustments shown for 2019 (A + B)	\$(484,568)	
Bal. For Disposition - 1588 (should match Total Claim column on	\$743,192	
DVA Continuity Schedule	ψ1.13/232	

- 10. In booking expense journal entries for Charge Type (CT) 1142 and CT 148 from the IESO invoice, please confirm which of the following approaches is used:
 - a. CT 1142 is booked into Account 1588. CT 148 is prorated based on RPP/non-RPP consumption and then booked into Account 1588 and 1589 respectively.
 - b. CT 148 is booked into Account 1589. The portion of CT 1142 equaling RPP minus HOEP for RPP consumption is booked into Account 1588. The portion of CT 1142 equaling GA RPP is credited into Account 1589.
 - c. If another approach is used, please explain in detail.
 - d. Was the approach described in response to the above questions used consistently for all years for which variances are proposed for disposition? If not, please discuss.

Reponse:

Hydro Ottawa follows approach a) in accordance with OEB's accounting guidance issued on February 21, 2019 to standardize the accounting processes for commodity accounts.

11. Questions on CT 1142

- a. Please describe how the initial RPP related GA is determined for settlement forms submitted by day 4 after the month-end (resulting in CT 1142 on the IESO invoice).
- b. Please describe the process for truing up CT 1142 to actual RPP kWh, including which data is used for each TOU/Tier 1&2 prices, as well as the timing of the true up.
- c. Has CT 1142 been trued up for with the IESO for all of 2019?
- d. Which months from 2019 were trued up in 2020?

Hydro Ottawa Limited
EB-2019-0261
Exhibit 9
Tab 3
Schedule 1
Attachment B
UPDATED
May 5, 2020
Page 3 of 7

- i. Were these true ups recorded in 2019 or 2020 balance in the General Ledger?
- e. Have all of the 2019 related true-up been reflected in the applicant's DVA Continuity Schedule in this proceeding?

Response:

- a. For the initial settlement, a number of reports are run for all customer groups and provide the estimated kWh sales, at each RPP rate point, and Non-RPP kWh sales, based on preliminary meter data. The day 4 estimated RPP GA cost is calculated based on estimated RPP kWh sales multiplied by the GA 2nd estimate rate and is included in CT 1142 submission. This estimated RPP GA cost is recorded to Account 1588.
- b. The first true-up RPP settlement amount is done the following month which consists of updates to actual for the GA rate and energy price with no change to RPP and Non-RPP sales. The first true-up RPP settlement amount includes an updated RPP GA cost (estimated RPP kWh in the initial RPP settlement multiplied by the actual GA rate paid). Actual GA rate paid is the total GA amount paid (per CT148 on the IESO and Hydro One invoices) divided by updated wholesale GA B kWh volumes. The total wholesale volume is updated to actual based on IESO invoice, Hydro One invoice and final embedded generation payments. We verify that the GA paid rate approximates the final GA posted rate prior to using it for CT 1142 settlement. In addition, the difference between TOU/Tier 1&2 prices and the updated energy price multiplied by estimated RPP quantities is included in the first true-up RPP settlement amount. The difference between the initial RPP settlement amount and the first true-up RPP settlement amount is included in the CT 1142 submission and is booked to 1588.

RPP settlement amount is again updated with a 2nd true-up, normally two months after the initial submission, based on actual kWh sales with no change to

Hydro Ottawa Limited
EB-2019-0261
Exhibit 9
Tab 3
Schedule 1
Attachment B
UPDATED
May 5, 2020
Page 4 of 7

GA rate or energy prices. The RPP kWh sales, at each RPP rate point, and Non-RPP kWh sales are updated with actual kWh sales, based on final metered data. The difference between the 2nd true-up RPP settlement amount and the first true-up RPP settlement amount is included in the CT 1142 submission and is booked to 1588; at this stage, account 1588 includes final RPP GA cost.

- c. Yes, the final true-up for 2019 was included in CT 1142 as part of the April 2020 month end submission.
- d. November 2019 (2nd true-up) and December 2019 (1st and 2nd true-up) and final true-up for 2019 were trued-up in 2020 and recorded in the 2020 general ledger. Otherwise true-ups (other than final) for January to October 2019 were recorded in the 2019 general ledger.
- e. Yes, the 2019 true-ups, recorded in 2020, and reversals of the 2018 true-ups recorded in 2019, are reflected in the DVA Continuity Schedule in cell BF31, \$(484,568). The total closing principle balance as at December 31, 2019 for 1588 is \$743,192, please refer to cell BO31.

12. Questions on CT 148

- a. Please describe the process for the initial recording of CT 148 in the accounts (i.e. 1588 and 1589).
- b. Please describe the process for true up of the GA related cost to ensure that the amounts reflected in Account 1588 are related to RPP GA costs and amounts in 1589 are related to only non-RPP GA costs.
- c. What data is used to determine the non-RPP kWh volume that is multiplied with the actual GA per kWh rate (based on CT 148) for recording as the initial GA expense in Account 1589?
- d. Does the utility true up the initial recording of CT 148 in Accounts 1588 and 1589 based on estimated RPP/non-RPP consumption proportions to actuals based on actual RPP-non-RPP consumption proportions?

Hydro Ottawa Limited
EB-2019-0261
Exhibit 9
Tab 3
Schedule 1
Attachment B
UPDATED
May 5, 2020
Page 5 of 7

- e. Please indicate which months from 2019 were trued up in 2020 for CT 148 proportions between RPP and non-RPP
 - i. Were these true ups recorded in 2019 or 2020 balance in the General Ledger?
- f. Are all true-ups for 2019 consumption reflected in the DVA Continuity Schedule?

Response:

- A. The initial accrual for CT 148 is based on (Total estimated wholesale volume minus estimated Class A kWh and RPP kWh) * 2nd GA B rate and this is booked to 1589. The initial estimated RPP related GA amount is booked to 1588. Total estimated wholesale volume is based on preliminary meter data.
- B. The RPP GA cost and non-RPP GA costs recorded in Account 1588 and 1589 respectively are updated over several months; updates are due to changes from estimates to final for both GA rate and RPP and non-RPP sales volume. Final Commodity expense in Account 1588 includes actual RPP GA cost (actual RPP kWh * GA paid rate) while GA expense in Account 1589 cost is actual non-RPP sales * actual GA rate paid. Journal entries based on these updates are made to adjust 1588 and 1589 balances in order to ensure the amounts reflected in 1588 and 1589 are correct.
- C. In December of each year end, the GA expense in Account 1589 is recorded using the paid GA rate (based on CT 148) * estimated non-RPP kWh. GA expenses for 2019 have been finalized in subsequent months up to and including April 2020. Journal entries have been made in 2020 to Account 1588 and 1589 respectively to record the true-up of RPP GA cost of \$(169,940) in the general ledger. This 2019 true-up amount of \$(169,940) has been included in the DVA Continuity Schedule.

- D. Yes, there is a true up of the initial recording of CT 148 in Accounts 1588 and 1589 based on estimated RPP/non-RPP consumption proportions to actuals based on actual RPP-non-RPP consumption proportions
- E. November 2019 (2nd true-up) and December 2019 (2nd true-up) were trued-up in 2020. The true-ups were recorded in the General Ledger balances of 2020.
- F. Yes, the 2019 true-ups, recorded in 2020, and reversals of the 2018 true-ups, recorded in 2019, are reflected in the DVA Continuity Schedule in cell BF32, \$485,255. The total closing principle balance as at December 31, 2019 for 1589 is \$5,762,960 please refer to cell BO32.
- 13. Questions regarding principal adjustments and reversals on the DVA Continuity Schedule:

Questions on Principal Adjustments - Accounts 1588 and 1589

- a. Did the applicant have principal adjustments in its 2020 rate proceeding which were approved for disposition?
- b. If yes, please provide a break-down of the total amount of principal adjustments that were approved (e.g. true-up of unbilled, true up of CT 1142, true up of CT 148 etc.) for each of Accounts 1588 and 1589.
- c. Has the applicant reversed the adjustment approved in 2020 rates in its current proposed amount for disposition?
- NB: only the principal adjustments amounts that were disposed in the previous proceeding should be reversed in this proceeding. For example, if no amount related to unbilled to billed adjustment for 2019 consumption was included in 2020 proceeding, this amount should not be included as a "reversal" from the previous year.
 - d. Please confirm that the allocation of charge type 148 has been trued up to actual proportion of RPP/non-RPP consumption in the GL.
