11

3

6

7

MATERIAL IMPACTS ON CUSTOMERS 12 **5.**

- 13 While the proposals set forth in this Application will change the rates for all customer classes,
- 14 there are no proposed changes that will result in bill impacts which exceed the 10% bill impact
- 15 threshold and which would thus have a material impact on customers.

16

17 **6. MATERIALITY THRESHOLD**

- As per the Filing Requirements, default materiality threshold is defined as \$1.0M for distributors
- with a revenue requirement greater than \$200.0M. As originally submitted, Hydro Ottawa's
- service revenue requirement for 2021 is \$214.9M. After accounting for 2019 actuals, the 2021
- 21 service revenue requirement is \$216.6M. Consequently, the default materiality threshold is
- 22 \$1.0M. However, consistent with the approach taken in its prior rebasing application, 1 Hydro
- Ottawa has generally explained variances based on a materiality threshold of \$750K for
- 24 purposes of this Application.

- 26 Hydro Ottawa notes that the \$1.0M materiality threshold will apply to the utility for any future Z
- 27 factor application.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 3 of 14

1 7. PUBLICATION AND NOTICE

- 2 Hydro Ottawa recommends that the Notice of Hearing for this Application be published in the
- 3 Ottawa Citizen and Le Droit newspapers, both of which are paid daily publications. The Ottawa
- 4 Citizen is the English language newspaper serving Ottawa and the surrounding region, including
- 5 the Village of Casselman. It has a total daily circulation of approximately 80,200. Le Droit is the
- 6 French language newspaper serving Ottawa and the surrounding region, including the Village of
- 7 Casselman. Its total daily circulation is approximately 30,000.

8

9 8. BILL IMPACTS

- 10 Table 1 and Table 2 provide a summary of distribution bill impacts and total bill percentage
- 11 impact for a typical residential customer using 750 kWh per month and for a General Service
- 12 < 50 kW customer using 2,000 kWh per month. Both tables have been updated to incorporate
- 13 2019 actuals.

14 15

Table 1 – AS ORIGINALLY SUBMITTED – Residential Bill Impact

Residential (750 kWh)	2021	2022	2023	2024	2025
Change in Distribution Charge (\$)	\$1.31	\$2.18	\$1.84	\$0.98	\$0.61
Change in Distribution Charge (%)	4.57%	7.28%	5.73%	2.88%	1.75%
Total Bill % change	1.32%	1.54%	1.28%	0.68%	0.43%

16 17

Table 1 – UPDATED FOR 2019 ACTUALS – Residential Bill Impact

Residential (750 kWh)	2021	2022	2023	2024	2025
Change in Distribution Charge (\$)	\$1.98	\$1.88	\$1.54	\$0.99	\$0.62
Change in Distribution Charge (%)	6.91%	6.15%	4.74%	2.91%	1.77%
Total Bill % change	1.53%	1.33%	1.38%	0.69%	0.43%

18 19

Table 2 – AS ORIGINALLY SUBMITTED – General Service < 50 kW Bill Impact

1 2

Table 2 – UPDATED FOR 2019 ACTUALS – General Service < 50 kW Bill Impact

General Service < 50 kW (2000 kWh)	2021	2022	2023	2024	2025
Change in Distribution Charge (\$)	\$2.89	\$5.02	\$4.48	\$3.05	\$2.26
Change in Distribution Charge (%)	4.05%	6.76%	5.65%	3.64%	2.60%
Total Bill % change	0.69%	1.36%	1.52%	0.80%	0.59%

3

4 9. FORM OF HEARING REQUESTED

5 Hydro Ottawa requests that this Application be disposed of by way of an oral hearing.

6

7 10. REQUESTED EFFECTIVE DATE

8 Hydro Ottawa is requesting approval of the proposed distribution rates and other charges set

9 forth in this Application effective January 1, 2021.

10

11 11. CHANGES TO METHODOLOGIES USED IN PREVIOUS APPLICATIONS

12 For certain business processes and for certain components in this Application, the methodology

13 employed by Hydro Ottawa has changed since the filing of the utility's previous rebasing

14 application. These changes are as follows:

15

16

17

18

19

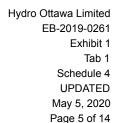

21

22

23

24

- Hydro Ottawa has adopted three new accounting standards, all of which are in the International Financial Reporting Standard ("IFRS") family of standards: IFRS 15 Revenue from Contracts with Customers, IFRS 9 Financial Instruments, and IFRS 16 Leases. Please see Exhibit 1-3-10: Changes to Accounting Policies Used in Previous
- 20 Applications for more information.
 - With the goal of achieving greater alignment with the definitions utilized in the Chapter 5
 Filing Requirements for Electricity Transmission and Distribution Applications, Hydro
 Ottawa has restructured certain classifications within its capital program. For example,
 the utility has shifted both the Metering Program and Station Enhancements Program to
 the System Service category, as the projects within these programs are more aligned

25 26

- with the drivers under this category. For additional examples and details, please see 1 2 Exhibit 2-4-3: Distribution System Plan.
 - As noted in section 16 below, Hydro Ottawa is requesting changes to the years of useful life for certain assets within the General Plant category. Please see Exhibit 2-4-4: Capitalization Policy and **UPDATED** Exhibit 4-3-1: Depreciation, Amortization, Disposal for more information.
 - In light of the modifications to the Conservation First Framework, this Application is proposing to rate-base certain conservation and demand management activities for all classes of customers, with a focus on commercial customers. For details, please refer to Exhibit 4-1-6: Conservation and Demand Management.
 - Various modifications have been made to the pricing methodology and the scope of Service Level Agreements governing the provision of shared services and allocation of costs between Hydro Ottawa and its affiliates. Please see Exhibit 4-2-1: Shared Services and Corporate Cost Allocation.
 - In accordance with Bill C-97, which received Royal Assent in June 2019, Hydro Ottawa has implemented new rules permitting accelerated capital cost allowance for eligible capital assets. Please see **UPDATED** Exhibit 4-4-1: Payments in Lieu of Taxes for more information.
 - In this Application, Hydro Ottawa has completed a cost allocation study based upon the OEB-approved model. The utility has made minor adjustments to the load profile data for purposes of cost allocation, as further explained in UPDATED Exhibit 7-1-1: Cost Allocation.
 - Hydro Ottawa is proposing to use updated Loss Adjustment Factors for the 2021-2025 period. Please see **UPDATED** Exhibit 8-9-1: Loss Adjustment Factors for more information.

OEB DIRECTIONS FROM PREVIOUS DECISIONS AND/OR ORDERS 27 **12**.

28 Below is a summary of previous OEB directives and a description of how such directives are 29 addressed by Hydro Ottawa in this Application.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 6 of 14

1

2 **12.1. DIRECTIVE #1**

In EB-2012-0383, the OEB indicated that unmetered load (kW) and consumption (kWh) data should ultimately be used to update load profile data for the purpose of the distributor's next cost allocation filing with the OEB, which occurs during the distributor's next cost of service application to the OEB. Subsequently, in a letter dated June 12, 2015, the OEB stated that "[t]here may be merit in updating load profiles to be more reflective of an individual distributor's circumstances. The OEB expects individual distributors to be mindful of material changes to load profiles and to propose updates in their respective cost of service or Custom IR applications when warranted."²

11

12 In this Application, details on updated load profiles can be found in **UPDATED** Exhibit 7-1-1:

13 Cost Allocation.

14

15 **12.2. DIRECTIVE #2**

On August 21, 2014, amendments to the *Distribution System Code* ("DSC") came into force which require a distributor to install a MIST meter on any installation that is forecast by the distributor to have a monthly average peak demand during a calendar year of over 50 kW.³ The deadline for distributors to comply with this DSC provision is August 21, 2020. Hydro Ottawa confirms that it is on track to achieve compliance with this requirement within the prescribed timeline.

22

23 **12.3. DIRECTIVE #3**

- 24 In its Decision rendered in EB-2015-0004 on February 25, 2016 (in the matter of a pole
- 25 attachment charge for Hydro Ottawa for the utility's 2016-2020 Custom Incentive Rate-Setting
- 26 ["Custom IR"] term), the OEB stated that Hydro Ottawa should use the pole attachment rate

² Ontario Energy Board, Letter re: *Issuance of New Cost Allocation Policy for Street Lighting Rate Class* (June 12, 2015), page 4.

³ Ontario Energy Board, *Notice of Amendment to a Code: Amendments to the Distribution System Code*, EB-2013-0311 (May 21, 2014).

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 **UPDATED** May 5, 2020 Page 7 of 14

1 approved in the Decision, "subject to any direction from the OEB regarding the implementation

2 of any changes resulting from the Policy Review."

3

The OEB's policy review culminated with the issuance of the Report of the Board on Wireline

⁵ Pole Attachment Charges on March 22, 2018. In this report, the OEB established a policy that

"at the time of rebasing, LDCs may choose to select the provincially approved charge or to use

utility-specific costs and pursue an LDC-specific pole attachment charge that better reflects their

cost structures."6

9

As directed, during its 2016-2020 rate term, Hydro Ottawa has maintained use of the pole

attachment charge that was approved as part of the adjudication of its 2016-2020 Custom IR

application. By way of this Application, Hydro Ottawa is proposing to use the OEB's generic pole

attachment rate for the 2021-2025 rate period. For additional information, please see UPDATED

14 Exhibit 8-7-1: Specific Service Charges.

15

DIRECTIVE #4 16 **12.4**.

17 In the aforementioned decision rendered in EB-2015-0004 with respect to a pole attachment

charge for Hydro Ottawa (hereafter referred to as the "Pole Attachment Decision"), the OEB

directed Hydro Ottawa to issue invoices for the difference between the interim rate of \$22.35

and the approved pole attachment rate of \$53.00, should the utility have already issued

invoices. Hydro Ottawa issued invoices for the pole attachment difference where invoices had

22 already been issued. Please see UPDATED Exhibit 6-1-1: Calculation of Revenue Deficiency or

Sufficiency for the adjustment to base revenue requirement related to the Pole Attachment

24 Decision.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 8 of 14

1 **12.5. DIRECTIVE #5**

2 In the Decision rendered in EB-2015-0004 on December 22, 2015 (in the matter of Hydro Ottawa's 2016-2020 Custom IR application), the OEB established a variance account for "the difference between revenue based on the final pole attachment charge yet to be approved by the OEB for Hydro Ottawa for 2016, and revenue based on the pole attachment charge underpinning the distribution rates approved by this order (i.e. \$57)." As instructed by the Pole Attachment Decision and approved as part of Hydro Ottawa's 2017 rate adjustment application, the amount was collected as part of Hydro Ottawa's 2017 rates. For additional information.

9 please see UPDATED Exhibit 9-1-3: Group 2 Accounts.

10

11 **12.6. DIRECTIVE** #6

12 In the Decision rendered in EB-2018-0044 on December 13, 2018 (in the matter of Hydro Ottawa's 2019 rate adjustment application), the OEB stated that it expected Hydro Ottawa to continue reporting on both the Efficiency Adjustment Mechanism and the Earnings Sharing Mechanism in the utility's 2021 application. Hydro Ottawa is therefore reporting on the 2019 Efficiency Adjustment Mechanism and 2018 Earnings Sharing Mechanism deferral accounts as part of this Application. For additional details, please see UPDATED Exhibit 9-1-3: Group 2 Accounts.

19

20 **12.7. DIRECTIVE #7**

In the aforementioned Decision rendered in EB-2018-0044, the OEB instructed Hydro Ottawa to provide an update on the resolution to an Industrial Conservation Initiative ("ICI") enrollment matter and report on any necessary adjustments. Hydro Ottawa has engaged the OEB on this matter and, at this time, is not requesting any adjustments. As part of its Decision and Order on Hydro Ottawa's 2020 rate adjustment application, the OEB stated, in reference to this directive, that "the OEB will proceed to finalize the balances for 2017 and 2018, and in light of the OEB's October 31, 2019 letter regarding Adjustments to Correct for Errors in Electricity Distributor

- 1 'Pass-Through' Variance Accounts After Disposition, the OEB expects that any revisions to
- 2 previous balances relating to this matter will be accommodated through the disposition of future
- 3 variance account balances."¹¹

4

5 12.8. **DIRECTIVE #8**

- 6 On February 14, 2019, the OEB issued a Decision and Order directing electricity distributors -
- 7 including distributors with utility-specific charges to implement new Retail Service Charges. 12
- 8 Hydro Ottawa implemented the new charges as directed and has used the updated rates as a
- placeholder as part of this Application. For additional details, please see Exhibit 8-4-1: Retail
- 10 Service Charges.

11

- 12 In addition, any electricity distributor which had discontinued the use of Account 1518 and
- 13 Account 1548 was to establish a new 1508 Sub-Account to record the difference in the
- 14 incremental revenue as a result of the Decision and Order. 13 As Hydro Ottawa had discontinued
- 15 the use of Account 1518 and Account 1548, a new Sub-Account to 1508 has been established.
- 16 In accordance with OEB direction, Hydro Ottawa started tracking the incremental revenue in this
- 17 new Sub-Account effective May 1, 2019. For additional details, please see UPDATED Exhibit
- 18 9-1-3: Group 2 Accounts.

19

20 12.9. **DIRECTIVE #9**

- 21 In its Decision rendered in EB-2019-0077 on October 17, 2019, the OEB approved an
- 22 application submitted by Hydro One Networks Inc. ("HONI") and Hydro Ottawa, pursuant to
- section 92 of the Ontario Energy Board Act, 1998, seeking leave to construct the Power South
- 24 Nepean Project.¹⁴ The project consists of two key components: (1) a new municipal transformer
- 25 station to be constructed by Hydro Ottawa; and (2) upgrades to existing transmission facilities,
- 26 as well as construction of a segment of new transmission line by HONI. The leave granted was

¹³ *Ibid*, Schedule B, page 1.

¹⁴ Ontario Energy Board, *Decision and Order*, EB-2019-0077 (October 17, 2019).

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 10 of 14

subject to the OEB's standard conditions of approval, one of which was that "[t]he applicants shall advise the OEB of any proposed material change in the project, including but not limited to changes in: the proposed route, construction schedule, the necessary environmental assessment approvals, and all other approvals, permits, licences, certificates and rights required to construct the proposed facilities."

6

Py way of this Application, Hydro Ottawa is informing the OEB of minor modifications to the project's construction schedule. Whereas the original schedule had contemplated an in-service date of November 2021, this date has subsequently been revised to Q2 2022. In addition, the name of the station has been changed from South Nepean Municipal Transformer Station ("MTS") to Cambrian MTS. For additional information, please see Attachment 2-4-3(E): Material Investments.

13

14 13. CONDITIONS OF SERVICE

- 15 The current version of Hydro Ottawa's Conditions of Service is available for viewing on the
- 16 following page of the utility's website:
- 17 https://hydroottawa.com/about-us/policies/conditions-service.

18

- 19 Since the filing of Hydro Ottawa's last rebasing application, there have been two sets of
- 20 revisions to the utility's Conditions of Service. Version 6 came into effect on April 1, 2017, while
- 21 Version 7 came into effect on April 1, 2019. A summary of the major changes to both versions
- 22 can be found below in Table 3 below.

. .

²³ ¹⁵ *Ibid*, Schedule B.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 11 of 14

Table 3 – Summary of Changes to Hydro Ottawa's Conditions of Service (2016-2019)

Section	Subject	Details	Implementation Date
1.6	Customer Rights and Responsibilities	Updated to identify customer rights	April 1, 2019
1.7	Distributor Rights and Responsibilities	Added distributor responsibilities to line up with the OEB's Consumer Charter	April 1, 2019
2.1	Connection	Added provisions for a Design Deposit for preparing and Offer to Connect, as well as a potential material and construction deposit for project-specific equipment.	April 1, 2017.
2.1.1	Point of Supply	Updated to reflect that Hydro Ottawa may choose to permit multiple services per property to accommodate electric vehicle charging (at its discretion)	April 1, 2019
2.1.2.1 / 3.1.3.7	Basic Credit	Policy clarified - one basic connection credit including one clearance or in-line pole. Expansion beyond that is subject to economic evaluation	April 1, 2019
2.2.1	Refusal to Connect for Previous Arrears	Updated to reflect Hydro Ottawa's policy on a refusal to connect unless previous amounts owing (related to previous accounts) are paid in full	April 1, 2019
2.4.5.5	Transformer Ownership Credit	Clarified that unmetered and temporary services do not receive a Transformer Ownership Credit ("TOC") and grandfathering conditions for TOCs that existed prior to November 1, 2000.	April 1, 2017
2.4.6.1	Methods of Payment and Payment Plans	Expanded options for bill payment.	April 1, 2017.
2.6.1 / 2.6.2	Customer Rate Classification	Clarified and updated criteria in determining customer rate classification.	April 1, 2017
3.0.8	Property Reinstatement	Added section outlining developer and property owner responsibilities with respect to new subdivision driveways and sidewalks.	April 1, 2017
3.0.17	Other Points of Ownership Demarcation	New section detailing demarcation of control signal lines and secondary distribution vault supplies	April 1, 2017
3.2.2 / 3.9.1	Service Requirements	Added 120/280 V, 2-phase, 3-wire, and 347.600V, 3-phase, 4-wire overhead supply up to 400A as offerings.	April 1, 2017
3.9	Temporary Services	Added conditions with respect to separate Temporary Services in addition to existing electrical Services	April 1, 2017

³ At the time of filing, Hydro Ottawa is not expecting that any of the approvals requested in this

⁴ Application would result in changes to its Conditions of Service.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 12 of 14

1 Hydro Ottawa confirms that no rates and charges are listed in its Conditions of Service that are

2 not in its Tariff of Rates and Charges.

3

4 14. CORPORATE AND UTILITY ORGANIZATIONAL STRUCTURE

- 5 A description of Hydro Ottawa's corporate and utility organizational structure, along with a
- 6 corporate entities relationship chart, is included in Exhibit 1-4-1: Corporate Structure and
- 7 Governance.

8

- 9 There are currently no plans for modifying Hydro Ottawa's corporate or operational structure,
- 10 nor for amending the utility's legal organization or control.

11

12 15. ACCOUNTING GUIDANCE FOR ACCOUNTS 1588 & 1589

- 13 In 2019, the OEB issued updated accounting guidance with respect to Account 1588 RSVA -
- 14 Power and Account 1589 RSVA Global Adjustment. 16 Hydro Ottawa confirms that its journal
- 15 entries are recorded, as per the instructions set forth in this guidance. For additional details,
- 16 please see **UPDATED** Exhibit 9-1-2: Group 1 Accounts.

17

18 16. SPECIFIC RELIEF REQUESTED

- 19 This Application is submitted pursuant to section 78 of the Ontario Energy Board Act, 1998.
- 20 Herein, Hydro Ottawa is seeking the following approvals, which are also separately identified in
- 21 UPDATED Appendix 2-A and clearly documented throughout applicable sections of this
- 22 Application:

2324

- a) Approval of 2021-2025 revenue requirement, as proposed in UPDATED Exhibit 6-1-1: Calculation of Revenue Deficiency or Sufficiency;
- b) Approval of 2021 distribution rates and charges, effective January 1, 2021, as proposed
 in UPDATED Exhibit 8-10-1: Current and Proposed Tariff of Rates and Charges;

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 13 of 14

- c) Approval of the Custom IR rate-setting formula and related elements for 2022-2025 distribution rates and charges, as proposed in UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework;
 - d) Approvals related to deferral and variance accounts, as thus proposed throughout various Schedules in Exhibit 9:
 - approval of the continuation of certain existing deferral and variance accounts, as set out in <u>UPDATED</u> Exhibit 9-1-1: Summary of Current Deferral and Variance Accounts;
 - ii) approval of the discontinuance of certain existing deferral and variance accounts, as proposed in UPDATED Exhibit 9-1-1: Summary of Current Deferral and Variance Accounts and UPDATED Exhibit 9-1-3: Group 2 Accounts;
 - iii) approval of new deferral and variance accounts, as proposed in Exhibit 9-2-1: New Deferral and Variance Accounts; and
 - iv) disposition of balances in existing deferral and variance accounts, as set out in UPDATED Exhibit 9-3-1: Disposition of Deferral and Variance Accounts.
 - e) Approval of annual reporting for the 2021-2025 rate term, as proposed in Exhibit 1-1-11: Proposed Annual Reporting 2021-2025;
 - f) Approval for a transformer substation called Cambrian MTS, with assets that operate above 50 kV, to form part of the Hydro Ottawa distribution system, as proposed in Exhibit 2-4-3: Distribution System Plan;
- g) Approval of the inclusion into the 2021 opening rate base of Hydro Ottawa's New Facilities and Connection Cost Recovery Agreement Payments, whose revenue requirement has been held in deferral and variance accounts;
- h) Approval to include the cost of any future right-of-use assets related to leases as part of rate base, as proposed in Exhibit 1-3-10: Changes to Accounting Policies Used in Previous Applications;
- 27 i) Approval to cease providing the transformer ownership credit effective November 1, 28 2025, as proposed in UPDATED Exhibit 8-1-1: Fixed/Variable Proportion;

- j) Approval to increase the Standard Supply Service Administrative Charge, as proposed
 in UPDATED Exhibit 8-7-1: Specific Service Charges;
- k) Approval of revised loss factor per **UPDATED** Exhibit: 8-9-1 Loss Adjustment Factors;
- 4 I) Approval to change the years of useful life for certain assets within the General Plant 5 category, as requested in Exhibit 2-4-4: Capitalization Policy and Attachment 2-4-3(F): 6 Fleet Replacement Program; and
- m) Approval of other items or amounts that may be requested by Hydro Ottawa in the course of the proceeding, and such other relief or entitlements that the OEB may grant.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 Attachment A UPDATED May 5, 2020 Page 1 of 3

UPDATED - Appendix 2-A List of Requested Approvals

The distributor must fill out the following sheet with the complete list of specific approvals requested and relevant section(s) of the legislation must be provided. All approvals, including accounting orders (deferral and variance accounts) new rate classes, revised specific service charges or retail service charges which the applicant is seeking, must be separately identified, as well being clearly documented in the appropriate sections of the application.

Additional requests may be added by copying and pasting blank input rows, as needed.

If additional requests arise, or requested approvals are removed, during the processing of the application, the distributor should update this list.

Hydro Ottawa Limited is seeking the following approvals in this application:

1		Approval of 2021-2025 revenue requirement, as proposed in UPDATED Exhibit 6-1-1: Calculation of Revenue Deficiency or Sufficiency;
2		Approval of 2021 distribution rates and charges, effective January 1, 2021, as proposed in UPDATED Exhibit 8-10-1: Current and Proposed Tariff of Rates and Charges;
3		Approval of the Custom Incentive Rate-Setting formula and related elements for 2022-2025 distribution rates and charges, as proposed in UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework;
4		Approvals related to deferral and variance accounts, as thus proposed throughout various Schedules in Exhibit 9, as oulined in 4i- iv below:
4	i	approval of the continuation of certain existing deferral and variance accounts, as set out in UPDATED Exhibit 9-1-1: Summary of Current Deferral and Variance Accounts;

4	ii	approval of the discontinuance of certain existing deferral and variance accounts, as proposed in UPDATED Exhibit 9-1-2: Group 1 Accounts and UPDATED Exhibit 9-1-3: Group 2 Accounts;
4	iii	approval of new deferral and variance accounts, as proposed in Exhibit 9-2-1: New Deferral and Variance Accounts; and
4	iv	disposition of balances in existing deferral and variance accounts, as set out in UPDATED Exhibit 9-3-1: Disposition of Deferral and Variance Accounts
5		Approval of annual reporting for the 2021-2025 rate term, as proposed in Exhibit 1-1-11: Proposed Annual Reporting - 2021-2025;
6		Approval for a transformer substation called Cambrian MTS, with assets that operate above 50kV, to form part of the Hydro Ottawa distribution system, as proposed in Exhibit 2-4-3: Distribution System Plan;
7		Approval of the inclusion into the 2021 opening rate base of Hydro Ottawa's New Facilities and Connection Cost Recovery Agreement Payments, whose revenue requirement has been held in deferral and variance accounts;
8		Approval to include the cost of any future right-of-use assets related to leases as part of rate base, as proposed in Exhibit 1-3-10: Changes to Accounting Policies Used in Previous Applications;
9		Approval to cease providing the transformer ownership credit effective November 1, 2025, as proposed in UPDATED Exhibit 8-1-1: Fixed/Variable Proportion;
10		Approval to increase the Standard Supply Service Administrative Charge, as proposed in UPDATED Exhibit 8-7-1: Specific Service Charges;

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 4 Attachment A UPDATED May 5, 2020 Page 3 of 3

11	Approval of revised loss factor per UPDATED Exhibit: 8-9-1 Loss Adjustment Factors;
12	Approval to change the years of useful life for certain assets within the General Plant category, as requested in Exhibit 2-4-4: Capitalization Policy and Attachment 2-4-3(F): Fleet Replacement Program; and
13	Approval of other items or amounts that may be requested by Hydro Ottawa in the course of the proceeding, and such other relief or entitlements that the OEB may grant.

CERTIFICATION OF EVIDENCE

I, Geoff Simpson, Chief Financial Officer of Hydro Ottawa Limited ("Hydro Ottawa"), hereby certify that, to the best of my knowledge, the UPDATED evidence filed in support of Hydro Ottawa's 2021-2025 Custom Incentive Rate-setting Application is accurate, consistent, and complete.

This certification is provided pursuant to the Ontario Energy Board's *Chapter 2, Chapter 3*, and *Chapter 5 Filing Requirements for Electricity Distribution Rate Applications*, as issued on July 12, 2018 and addended on July 15, 2019.

DATED this 4th day of May, 2020.

Geoff Simpson

Chief Financial Officer

Hydro Ottawa Limited

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 1 of 27

UPDATED APPLICATION SUMMARY

2

1

3 1. INTRODUCTION

- 4 This Schedule provides all of the information that is requested pursuant to section 2.1.6 of the
- 5 Ontario Energy Board's ("OEB") Chapter 2 Filing Requirements for Electricity Distribution Rate
- 6 Applications, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing
- 7 Requirements"). In addition, this Schedule summarizes the changes proposed in this Application
- 8 that will have a material impact on customers of Hydro Ottawa Limited ("Hydro Ottawa"),
- 9 including any changes to rates and charges that may affect discrete customer groups. As
- 10 appropriate, specific customers or customer groups that will be impacted by such proposals are
- 11 also identified.

12

13 2. REVENUE REQUIREMENT

- 14 As presented in Table 1 below, Hydro Ottawa's Service Revenue Requirement (as originally
- 15 submitted) is \$214.9M for the 2021 Test Year.

- 17 After accounting for 2019 actuals, Hydro Ottawa's Service Revenue Requirement is \$216.6M for
- the 2021 Test Year, as shown in the updated version of Table 1 below.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 2 of 27

Table 1 – AS ORIGINALLY SUBMITTED – Service Revenue Requirement - Change and Drivers (\$'000s)

	OEB- Approved	Test Year	Change		Drivers	
	2020	2021	\$	%

 $[\]frac{4}{5}$ This figure includes the mid-term adjustment to operations, maintenance and administration ("OM&A") expenses.

^{5 &}lt;sup>2</sup> Totals may not sum due to rounding.

2

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 3 of 27

Table 1 – UPDATED FOR 2019 ACTUALS – Service Revenue Requirement - Change and Drivers (\$'000s)

	OEB- Approved	Test Year	Change		Drivers
	2020	2021	\$	%	
Return on Rate Base	\$56,211	\$68,158	\$11,947	21%	 \$173.8M increase in net fixed assets (as originally submitted) \$171.9M increase in net fixed assets (accounting for 2019 actuals) Previously excluded items added back to rate base
Distribution Expenses (not including amortization)	\$89,007 ³	\$93,923	\$4,916	6%	 Increases in compensation Inflationary increases Increase in distribution operations expenses
Amortization	\$49,384	\$52,333	\$2,949	6%	- Increase in sustainment additions
Payment in Lieu of Taxes	\$5,943	\$2,224	\$(3,719)	(63%)	 Higher CCA deduction caused by large amount of fixed asset additions (as originally submitted) Higher accounting depreciation add back caused by large amount of fixed asset additions (accounting for 2019 actuals)
Service Revenue Requirement ⁴	\$200,544	\$216,638	\$16,094	8%	

4 For further details on Hydro Ottawa's revenue requirement, please see **UPDATED** Exhibit 6-1-1:

5 Calculation of Revenue Deficiency or Sufficiency.

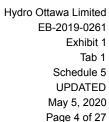

7 3. BUDGETING AND ACCOUNTING ASSUMPTIONS

- 8 3.1. ECONOMIC OVERVIEW (GROWTH AND INFLATION)
- 9 In keeping with the rate adjustment formula used in its 2016-2020 Custom Incentive
- 10 Rate-setting ("Custom IR") plan, Hydro Ottawa has assumed the Conference Board of Canada's
- updated inflation rate of 2.01% for all non-compensation-related costs in this Application.

¹² This figure includes the mid-term adjustment to operations, maintenance and administration ("OM&A") expenses.

3

^{13 &}lt;sup>4</sup> Totals may not sum due to rounding.

With respect to operations, maintenance and administration ("OM&A") expenses, year one of the Application term (2021) is a traditional rebasing year, with rates set on the basis of a forecast Test Year of \$93.9M. Thereafter, OM&A expenditures in each year of the rate term will be adjusted using a Custom Price Escalation Factor ("CPEF") of 2.51%. The CPEF is comprised of three components, including a forecasted inflation factor of 2.26%. This factor is derived from applying Hydro Ottawa's specific labour/non-labour weighting factors to two indices (the Gross Domestic Product Implicit Price Index and Average Weekly Earnings for workers in Ontario, both reported by Statistics Canada) and averaging them over the 2017-2025 period.

9

10 For more information on the CPEF, please see UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework.

12

13 3.2. ACCOUNTING STANDARDS

14 Hydro Ottawa adopted International Financial Reporting Standards ("IFRS") for financial 15 reporting purposes on January 1, 2015.

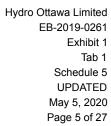

16

- Subsequent to that action, and to the filing of Hydro Ottawa's last rebasing application,⁵ the utility has adopted three new accounting standards as required by the International Accounting Standards Board, as follows:
- IFRS 9 *Financial Instruments*: this standard introduces revised guidance on the classification and measurement of financial assets, including basing the classification of financial assets on their contractual cash flow characteristics and the entity's business model for managing financial assets. Hydro Ottawa's adoption of IFRS 9 was effective as of January 1, 2018. There is no impact to revenue requirement associated with adoption of this standard.
 - IFRS 15 Revenue from Contracts with Customers: IFRS 15 provides a standardized, five-step model to recognize revenue (i.e. identify contract, identify performance obligations, determine transaction price, allocate transaction price, and recognize

26

27

Hydro Ottawa Limited, 2016-2020 Custom Incentive Rate-Setting Distribution Rate Application, EB-2015-0004 (April 29, 2015).

- revenue). The adoption of IFRS 15 was effective as of January 1, 2018. There is no 2 impact to revenue requirement associated with its adoption.
 - IFRS 16 Leases: this standard eliminates the current dual model (i.e. on and off balance sheet) and aims to provide greater comparability between companies who lease assets (i.e. right-of-use assets) and those who purchase assets with a single on-balance sheet approach. Hydro Ottawa adopted IFRS 16 as of January 1, 2019. As of that date, the adoption of IFRS 16 did not result in any right-of-use assets being recognized by the utility. However, by way of this Application, Hydro Ottawa is proposing to include the cost of any future right-of-use assets related to leases as part of rate base, since it is akin to purchasing property, plant, and/or equipment and financing it.

11

7

8

9

10

- 12 For additional information on the aforementioned IFRS standards, please see Exhibit 1-3-10:
- 13 Changes to Accounting Policies Used in Previous Applications.

14

15 **4.** LOAD FORECAST SUMMARY

16 Hydro Ottawa's forecasted energy sales for the 2021 Test Year are 7,065,745 MWh, as originally submitted. This is 374,879 MWh (5.0%) lower than the 2016 OEB-approved MWh forecast. Accounting for 2019 actuals, Hydro Ottawa's forecasted energy sales for the 2021 Test

Year are 7,063,482 MWh. This is 377,142 MWh (5.1%) lower than the 2016 OEB-approved

MWh forecast.

21

- 22 Hydro Ottawa's demand sales forecast for the 2021 Test Year is 9,465,512 kW, as originally
- submitted.6 This is 659,441 kW (6.5%) lower than the 2016 OEB-approved kW forecast.
- Accounting for 2019 actuals, Hydro Ottawa's forecasted demand sales for the 2021 Test Year
- 25 are 9,454,357 kW. This is 708,793 kW (7.0%) lower than the 2016 OEB-approved kW forecast.

- 27 The utility's forecasted average number of customers for the 2021 Test Year is 344,936,
- 28 representing an increase of 6.1% over the 2016 OEB-approved number.

²⁹ ⁶ This represents kW sales for commercial classes above 50kW, Sentinel Lighting, Street Lighting, and Standby 30 Power.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 6 of 27

- 1 The updated version of Table 2 provides a high-level summary of Hydro Ottawa's load forecast
- 2 for the 2021-2025 Custom IR term.

3

Table 2 – AS ORIGINALLY SUBMITTED – Load Forecast Summary

Year	Total Sales (MWh)	Total Sales Demand (kW) ⁷	Average Customers ⁸
2021	7,065,745	9,465,512	344,936
2022	7,088,184	9,452,590	348,104
2023	7,116,619	9,452,792	351,138
2024	7,165,092	9,472,485	354,088
2025	7,179,631	9,457,798	357,017

5

6

Table 2 - UPDATED FOR 2019 ACTUALS - Load Forecast Summary

Year	Total Sales (MWh)	Total Sales Demand (kW)9	Average Customers ¹⁰
2021	7,063,482	9,454,357	344,936
2022	7,085,688	9,450,676	348,104
2023	7,113,883	9,451,114	351,138
2024	7,162,048	9,470,932	354,088
2025	7,176,418	9,456,613	357,017

7

- 8 Hydro Ottawa has provided a detailed five-year, class-specific, and weather-normalized load
- 9 forecast and customer connection forecast for each rate class in UPDATED Exhibit 3-1-1: Load
- 10 Forecast. This forecast incorporates modifications to the provincial electricity conservation
- 11 framework that were enacted in 2019 as well as the impacts of embedded generation.

12

13 5. DISTRIBUTION SYSTEM PLAN

- 14 Hydro Ottawa has formulated a consolidated Distribution System Plan ("DSP"), which provides
- 15 a detailed and comprehensive view of the utility's investment plans and supporting information
- 16 for the 2021-2025 period.11 The DSP identifies the capital investments in Hydro Ottawa's

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 7 of 27

- 1 distribution system and general plant assets which are required to maintain safe and reliable
- 2 service to customers in the City of Ottawa and Village of Casselman, with operations that
- 3 remain responsive to their primary needs and preferences: (i) keeping distribution rates low; (ii)
- 4 maintaining reliability; and (iii) investing in new technology. In addition, the DSP outlines how
- 5 capital investments will be prioritized, paced, and optimized, while minimizing rate impacts for
- 6 customers and facilitating continuous improvement and productivity.

- 8 The expenditures outlined in the DSP are driven by distinct, specific needs. Table 3 below
- 9 summarizes the major drivers underlying Hydro Ottawa's capital investment program for the
- 10 2021-2025 rate period.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 8 of 27

Table 3 – 2021-2025 Capital Expenditure Drivers by Investment Category

Investment Category	Driver	Description				
	Customer Service Request	Customer request for new connection (load or generation)				
System Access	Third Party Requirements	Request by a third party for plant relocation or upgrade to an existing service				
	Mandated Service Obligation	Regulatory requirement to maintain distribution licence under the <i>Distribution System Code</i> or requirement as per Hydro Ottawa's Conditions of Service				
System Renewal	Assets at End of Service Life i. Failure ii. Failure Risk iii. Substandard Performance iv. High Performance Risk v. Functional Obsolescence	 i. Asset no longer meets functional requirements ii. Asset is at risk of no longer meeting functional requirements iii. Asset still meets functional requirements; however, it falls below standards for operability or efficiency iv. Asset is at risk of failure in a way that can cause harm or damage to other equipment or assets or would put the distribution system in a detrimental state v. Asset is functionally obsolete with no spare parts, tools, and/or software to continue operation 				
	Capacity Constraint	Requirement for additional capacity (station transformation or circuit) due to planned or realized load increases				
System Service	Reliability	Requirements driven by poor distribution system performance such as abnormally high duration or frequency of interruptions				
	System Operability	Requirements for improved system operability and visibility				
	System Capital Investment Support	 Capital contributions to Hydro One Networks Inc. for connection projects Requirement for fleet/vehicle acquisition 				
General Plant	System Maintenance Support	Requirement for tools and associated equipment				
	Business Operations Efficiency	Requirements for information technology software and systems				
	Non-System Physical Plant	Building infrastructure requirements				

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 9 of 27

- 1 Table 4, as updated below, provides a summary of the total capital expenditures that are
- 2 planned for the 2021-2025 Custom IR rate term. The changes in 2021 and 2022 are the result
- of updates to the MiGen program, as described in updated section 2.3.3 of Attachment 2-4-3(E):
- 4 Material Investments.

Table 4 – AS ORIGINALLY SUBMITTED – Summary of 2021-2025 Capital Expenditures (\$'000,000s)

Investment Category	2021	2022	2023	2024	2025	Average 2021-2025
System Access	\$56.7	\$41.0	\$37.4	\$34.5	\$34.0	\$40.7
System Renewal	\$43.3	\$44.0	\$40.2	\$39.4	\$40.5	\$41.5
System Service	\$31.0	\$27.4	\$24.3	\$25.2	\$23.9	\$26.4
General Plant	\$32.0	\$11.7	\$7.6	\$17.4	\$16.9	\$17.1
Capital Contributions	\$(41.3)	\$(25.2)	\$(19.9)	\$(19.2)	\$(19.3)	\$(25.0)
TOTAL	\$121.8	\$98.9	\$89.6	\$97.2	\$96.0	\$100.7

Table 4 – UPDATED FOR 2019 ACTUALS – Summary of 2021-2025 Capital Expenditures (\$'000,000s)

Investment Category	2021	2022	2023	2024	2025	Average 2021-2025
System Access	\$56.7	\$41.0	\$37.4	\$34.5	\$34.0	\$40.7
System Renewal	\$43.3	\$44.0	\$40.2	\$39.4	\$40.5	\$41.5
System Service	\$26.7	\$28.3	\$24.3	\$25.2	\$23.9	\$25.7
General Plant	\$32.0	\$11.7	\$7.6	\$17.4	\$16.9	\$17.1
Capital Contributions	\$(39.2)	\$(23.5)	\$(19.9)	\$(19.2)	\$(19.3)	\$(24.2)
TOTAL	\$119.5	\$101.5	\$89.6	\$97.2	\$96.0	\$100.8

- 12 These figures illustrate the sustained level of need for significant capital investment in Hydro
- 13 Ottawa's distribution system, in order to maintain reliability and service quality for customers.
- 14 This need is the result of several factors, including aging infrastructure, an expanding customer
- base, continued growth across the City of Ottawa, and the effects of severe weather events.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 10 of 27

1 5.1.1. Renewable Energy Connection Costs

- 2 There are no renewable energy connection projects included in Hydro Ottawa's DSP which
- 3 seek cost recovery from all ratepayers.

4

- 5 Similarly, Hydro Ottawa is not planning to specifically address stations that have restrictions for
- 6 the connection of Energy Resource Facilities ("ERFs") within its capital expenditure plan.
- 7 Nevertheless, the utility intends to replace station transformers that are identified for
- 8 replacement through its Asset Management Process with units that have reverse-flow
- 9 capabilities and can thus accommodate injection of renewable energy onto the grid.

10

- 11 The DSP does acknowledge that the number of ERF connections is expected to continue
- 12 growing over the 2021-2025 rate period. Hydro Ottawa will respond to customer/generator
- 13 requests for ERF connection and will seek appropriate recovery of costs from ERF proponents,
- 14 as per its established Connection Impact Assessment process.

15

16 5.1.2. Smart Grid Costs

17 Table 5 below identifies planned investments related to Smart Grid for the 2021-2025 period.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 11 of 27

Table 5 – AS ORIGINALLY SUBMITTED – Planned Smart Grid Investments (\$'000s)

	Forecast						
Budget Program & Project ¹²	2021	2022	2023	2024	2025	Total	
Stations Enhancements • Station Temperature Sensors • Station Cybersecurity (OT Visibility & Safeguards)	\$905	\$459	\$459	\$459	\$459	\$2,741	
Distribution Enhancements • Smart Grid Fund Initiatives • Great-DR Phase 2 (MiGen) • Other Distribution Enhancement Projects	\$5,955	\$4,016	\$2,262	\$1,860	\$1,788	\$15,881	
SCADA Upgrades	\$803	\$2,708	\$1,521	\$501	\$1,891	\$7,424	
RTU Upgrades • Self-Healing Grid	\$253	\$253	\$253	\$253	\$253	\$1,265	
Communications Infrastructure Optical Telecommunications Network Replacement Field Area Network	\$1,790	\$1,044	\$1,044	\$1,044	\$2,035	\$6,957	
Remote Disconnected Smart Meter	\$501	\$501	\$501	\$501	\$501	\$2,505	
Cybersecurity Enhancement	\$302.3	\$201.5	\$201.5	\$201.5	\$201.5	\$1,108	

2

Additional information on these projects are available in Attachment 2-4-3(E): Material Investments. With the
 exception of Cybersecurity Enhancement, all of the projects listed fall under the System Service category.

⁵ Cybersecurity Enhancement is within the General Plant category.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 **UPDATED** May 5, 2020 Page 12 of 27

2

3 **5.1.3. Regional Planning Initiatives**

- 4 Hydro Ottawa is currently engaged in the latest Integrated Regional Resource Plan ("IRRP")
- 5 cycle for the Greater Ottawa area, which is expected to be completed in Q1 2020. 4 A number of
- 6 regional and bulk system needs are currently being studied to determine optimal solutions.
- 7 Table 6 below summarizes the preliminary short-term needs that have thus far been identified
- 8 through the IRRP process. Of note, along with Hydro Ottawa, Hydro One Networks Inc.

⁹ ¹³ Additional information on these projects are available in Attachment 2-4-3(E): Material Investments. With the 10 exception of Cybersecurity Enhancement, all of the projects listed fall under the System Service category.

¹¹ Cybersecurity Enhancement is within the General Plant category.
12 14 The new IRRP for Greater Ottawa was published by the Independent Electricity System Operator ("IESO") on

¹³ March 4, 2020. The planning solutions identified in the final IRRP match those that are identified in Table 6 below. In

¹⁴ addition, the IESO is set to undertake an addendum study to investigate a handful of planning matters in more detail.

¹⁵ Accordingly, Hydro Ottawa has not made any updates to this section of the Schedule or to its 2021-2025 DSP, as the

¹⁶ existing content regarding regional planning initiatives remains relevant.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 1
Schedule 5
UPDATED
May 5, 2020
Page 13 of 27

- 1 ("HONI") is set to be assigned responsibility for executing certain solutions that are under
- 2 consideration for addressing identified needs.

3

4 Table 6 – Preliminary Results from Active IRRP Cycle for Greater Ottawa Region

Need	Description	Preliminary Solution
Supply to Kanata	Several stations in the area are operating at or near their planning capacity. Large commercial and residential developments are driving significant growth in electricity demand in the near-term and medium-term.	Limitations on the existing transmission system in the area cannot accommodate expansion of the existing stations. A new station is likely required to provide reliable long-term supply in the area. The IESO is currently developing a bulk transmission plan in parallel to the Greater Ottawa IRRP that might impact requirements for connecting the new station. Bulk transmission plan will be finalized in 2020. Hydro Ottawa is planning to implement distribution system upgrades to distribute forecast growth between stations in the area.
Supply to South East Ottawa	Several stations in the area are operating at or near their planning capacity. Demand is expected to increase driven by large residential, mixed and industrial developments.	Hydro Ottawa will proceed with a plan to build a new 230 kV connected supply station in the south east part of the City. The new station is planned for energization in 2025. HONI will evaluate the options for this upgrade in the Regional Infrastructure Plan.
Supply to East Ottawa	Bilberry Creek TS came into service in 1976 and is approaching end of life. Options to decommission or refurbish the station were evaluated including the impact to the bulk system. Large industrial and residential mixed-use developments are forecasted to increase demand over the near-term and medium-term.	HONI will refurbish Bilberry Creek TS, including like for like transformer replacement. HONI will expand the station to provide two additional breaker positions to supply Hydro Ottawa customers.
Supply to the Regional 115 kV System	Several of the 230/115 kV transformers at Merivale and Hawthorne are operating at or near their capability	HONI will replace the more limiting of the 230/115 kV transformers at Merivale TS in the near-term so that the two Merivale transformers have similar capability. Subsequent to the release of the IRRP, the Working Group will undertake an IRRP Addendum Study. This will include an evaluation of the potential benefit of non-wires options to manage future demand growth on the 115 kV system.

- 6 Hydro Ottawa's five-year investment plan incorporates required projects to address the
- 7 near-term regional needs, as identified in Table 7 below. Of note, these investments will remain
- 8 subject to change through the finalization of the IRRP and subsequent Regional Infrastructure
- 9 Plan ("RIP") processes.

3 6. RATE BASE

- 4 Table 8, as updated below, summarizes proposed changes in rate base for 2021. As originally
- 5 submitted, Hydro Ottawa's 2021 Test Year rate base is budgeted to be \$244.8M or 25% higher
- 6 than the 2020 OEB-approved amount. Accounting for 2019 actuals, Hydro Ottawa's 2021 Test
- 7 Year rate base is budgeted to be \$256.9M or 26% higher than the 2020 OEB-approved amount.
- 8 The increase is attributable to planned increases in capital additions as well as to
- 9 previously-excluded items being placed back into rate base at their net book value.

10

- 11 Full details on Hydro Ottawa's proposed rate base for 2021-2025 can be found in UPDATED
- 12 Exhibit 2-1-1: Rate Base Overview.

7 7. OPERATIONS, MAINTENANCE, AND ADMINISTRATION EXPENSE

- 8 Hydro Ottawa's 2021 OM&A budget was developed as a Test Year rebasing budget and is
- 9 based on the utility's forecast of expenditures needed to maintain service reliability and safety,
- and to remain in compliance with regulatory and legislative requirements.

12 As discussed in section 3.1 above, for the 2022-2025 Test Years Hydro Ottawa will adjust

OM&A using a CPEF to align with the principles of incentive regulation, as enshrined in the

4 Renewed Regulatory Framework ("RRF"). This formula consists of a two-component Price Cap

5 Index ("PCI"): inflation and productivity. The formula includes an inflation factor and two factors

for productivity. One productivity factor is a fixed amount for industry-wide productivity, and the other is a stretch factor which is set each year based on the level of productivity the distributor

18 has achieved. In addition to the PCI components, the CPEF includes a growth factor as well.

^{19 18} Approved capital expenditures for 2016-2020 are equivalent to those which were included in Hydro Ottawa's

original 2016-2020 rate application. In the Approved Settlement Agreement governing the utility's 2016-2020 rate
 plan, the \$10.0M reduction was applied to capital additions only.
 Approved capital expenditures for 2016-2020 are equivalent to those which were included in Hydro Ottawa's

original 2016-2020 rate application. In the Approved Settlement Agreement governing the utility's 2016-2020 rate plan, the \$10.0M reduction was applied to capital additions only.

4 5

The Filing Requirements stipulate that applicants must specify total compensation costs for the Test Year as well as the change in compensation costs between the Test Year and the last OEB-approved year (expressed in both monetary and percentage terms). In this regard, Hydro Ottawa notes that the previous approval granted by the OEB with respect to compensation 11 costs was embedded in the OEB's general approval of the utility's total OM&A costs for the 2016-2020 period. More specifically, in the adjudication of Hydro Ottawa's 2016-2020 Custom 13 IR application, the utility was granted approval for an overall envelope of OM&A costs (inclusive 14 of compensation) for the 2016 base year, with 2017-2020 OM&A costs adjusted on an annual 15 basis using an escalator factor.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 22 of 27

- 1 For more information on Hydro Ottawa's compensation costs, including a comparison of 2021
- 2 Test Year compensation costs with Historical and Bridge Year costs for the 2016-2020 period,
- 3 please see UPDATED Exhibit Attachment 4-1-5(A): Employee Compensation Strategy.

5 8. COST OF CAPITAL

- 6 Table 14 below summarizes the capital structure, cost of capital parameters, and Weighted
- 7 Average Cost of Capital ("WACC") that Hydro Ottawa is proposing to utilize for purposes of this
- 8 Application.

9

4

Table 14 – 2021-2025 Weighted Average Cost of Capital

Year	Short-Term Debt Weight	Short-Term Debt Rate	Long-Term Debt Weight	Long-Term Debt Rate	Equity Weight	Return on Equity	WACC
2021	4%	2.75%	56%	3.35%	40%	8.88%	5.54%
2022	4%	2.75%	56%	3.36%	40%	9.13%	5.64%
2023	4%	2.75%	56%	3.40%	40%	9.31%	5.74%
2024	4%	2.75%	56%	3.44%	40%	9.41%	5.80%
2025	4%	2.75%	56%	3.69%	40%	9.46%	5.96%

11

Hydro Ottawa is using the OEB's cost of capital methodology for its capital components. The short-term debt component uses the 2.75% rate as outlined in the OEB's 2020 Cost of Capital Parameters letter dated October 31, 2019.²⁵ Hydro Ottawa is proposing that this rate be locked in for the five-year term covered by this Application. The long-term debt and return on equity ("ROE") are calculated as per UPDATED Exhibit 5-1-1: Cost of Capital and Capital Structure, and use the OEB's formulaic methodology to determine the forecast rates. The only deviation from this is the use of Hydro Ottawa's own historical spreads in determining long-term interest rates.

²⁰ Ontario Energy Board, Letter re: 2020 Cost of Capital Parameters (October 31, 2019).

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 23 of 27

1 9. COST ALLOCATION AND RATE DESIGN

2 9.1. COST ALLOCATION

Hydro Ottawa engaged Elenchus Research Associates ("Elenchus") to assist in preparing a Cost Allocation Model for the 2021 Test Year. Using the OEB's approved cost allocation methodologies and the V3.7 Cost Allocation Model, Hydro Ottawa's 2021 base revenue requirement has been allocated to the utility's nine rate classes. The primary purpose of the Cost Allocation Report is to determine the proportions of total revenue requirement that are the responsibility of each rate class.²⁶ The resulting revenue-to-cost ratios for each rate class were determined using the total revenues over costs for the Test Year, pursuant to the OEB's policies for cost allocation by electricity distributors.²⁷

11

12 **9.2. RATE DESIGN**

The results of the Cost Allocation Report were the main input into Hydro Ottawa's rate design process. Elenchus undertook the study to determine whether refinements were necessary to better reflect the OEB's principle of cost causality in the utility's cost allocation to customers. The result of Elenchus' study indicated that some classes of customers fell outside the acceptable revenue-to-cost ranges as established by the OEB. The utility adjusted GS <50 kW, Large Use, and Street Lighting customer classes to bring them within the specified ranges. The Sentinel customer class will be adjusted over a five-year period to mitigate the bill impact associated with a large increase in revenue requirement that is necessary to bring that class within its range.

- 23 As of January 1, 2020, Residential distribution rates are fully fixed in compliance with the policy
- 24 adopted by the OEB in 2015.²⁸ Rates for all other customer classes will continue to have both a
- 25 fixed component and a variable component based on consumption (kWh) or demand (kW).

²⁶ Please see Attachment 7-1-1(B): Cost Allocation Report.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 24 of 27

1 10. DEFERRAL AND VARIANCE ACCOUNTS

- 2 Hydro Ottawa proposes to clear Group 2 deferral accounts, including the Lost Revenue
- 3 Adjustment Mechanism ("LRAM") Account. The total net deferral and variance ("DVA") balance
- 4 proposed for disposition is \$(5,751,923), as originally submitted. Hydro Ottawa is proposing that
- 5 the Rate Riders for Group 2 Accounts (excluding LRAM) be disposed of over two years. For the
- 6 LRAM Variance Account, a one-year disposition period is proposed. As no Group 1 Accounts
- 7 are being requested for disposition at this time, the rate riders are the same for Regulated Price
- 8 Plan ("RPP") and non-RPP customers.

9

- 10 After accounting for 2019 actuals, Hydro Ottawa is proposing to clear Group 1 and Group 2
- 11 Accounts, including the LRAM Account. The total net DVA updated balance proposed for
- disposition is \$(6,695,545). Hydro Ottawa is proposing that the Deferral/Variance Accounts Rate
- 13 Riders for Group 1 and Group 2 Accounts be disposed of over two years. Disposition of all other
- 14 rate riders is requested over a one-year period.

15

- 16 Hydro Ottawa is proposing modifications to the following DVAs (for details, please refer to
- 17 Exhibit 9-2-1: New Deferral and Variance Accounts):

18 19

20

- Uniform System of Account ("USofA") Sub-Account 1508 Connections Cost Recovery Agreement Payments Deferral Account
- USofA Sub-Account 1508 Capital Additions Revenue (excluding System Access)
 Differential Variance Account
- USofA Sub-Account 1508 System Access Capital Additions Revenue Requirement
 Differential Variance Account
 - USofA Sub-Account 1508 Earnings Sharing Mechanism Variance Account

26

25

27 In addition, Hydro Ottawa is requesting that the following DVAs be discontinued:

28 29

1508 Sub-Account - Energy East Consultation Costs

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 25 of 27

- 1508 Sub-Account Pole Attachment Charge Revenues Variance Account
- 1508 Sub-Account Wireless Attachment Revenues Deferral Account
 - 1508 Sub-Account Y-Factor Variance Account
 - 1508 Sub-Account Gains/Losses from Sale of Existing Facilities Deferral
 - 1508 Sub-Account New Facilities Deferral Account

6

5

3

7 The following Accounts were approved for discontinuance as part of Hydro Ottawa's 2016-2020 8 rate plan. However, clearance of final balances are being requested as part of this Application.

9

10

- Account 1518 Retail Cost Variance Account Retail
- Account 1548 Retail Cost Variance Account STR

12

- 13 Further information regarding DVAs, the amounts proposed for clearance, and proposals for
- 14 new DVAs, please refer to UPDATED Exhibit 9-1-1: Summary of Current Deferral and Variance
- 15 Accounts, Exhibit 9-2-1: New Deferral and Variance Accounts, and UPDATED Exhibit 9-3-1:
- 16 Disposition of Deferral and Variance Accounts.

17

18 **11**. **BILL IMPACTS**

- 19 In developing its capital and OM&A budgets for the 2021-2025 period, Hydro Ottawa was
- 20 careful to have due regard for the impacts that bill increases may have on customers. The
- 21 utility's objective was to keep the total bill impacts for each of its customer classes as minimal
- 22 as possible.

- 24 The updated version of Table 15 below provides a summary of the total bill impacts for typical
- 25 customers in all classes and has been updated to account for 2019 actuals. Further details
- 26 regarding Hydro Ottawa's proposed bill impacts are available in UPDATED Exhibit 8-12-1.

Schedule 7
UPDATED
May 5, 2020
Page 1 of 6

UPDATED CUSTOMER SUMMARY

A copy of Hydro Ottawa's Customer Summary is attached below, in accordance with section 2.1.3 of the *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019.

In this Schedule, Hydro Ottawa has presented bill impacts with respect to the distribution portion of bills for the residential and GS < 50 kW customer classes. As of January 1, 2020, Hydro Ottawa completed its transition to fully fixed rates for residential customers. Seeing as there is no longer a variable component in the distribution rates charged to residential customers, Hydro Ottawa has not utilized a consumption threshold in its presentation of distribution bill impacts for these customers.

The information related to bill impacts has been updated to account for 2019 actuals. In addition, total capital expenditures for 2021-2025 have been adjusted to reflect updates to the MiGen program, as described in updated section 2.3.3 of Attachment 2-4-3(E): Material Investments.

Understanding Hydro Ottawa's 2021-2025 Rate Application

ABOUT HYDRO OTTAWA

Hydro Ottawa is the third largest municipally-owned electricity distributor in Ontario. We distribute electricity to approximately 340,000 customers, serving a population of more than one million people in the City of Ottawa and the Village of Casselman. We are a private business corporation that is 100% owned by our shareholder, the City of Ottawa.

It's our responsibility to transport power from the provincial transmission grid and deliver it safely and reliably to homes and businesses across our service territory. We own and operate a large, complex distribution network consisting of 50,000 poles, 2,700 km of overhead lines, 3,000 km of underground cable, and 45,000 transformers.

OUR FIVE-YEAR BUSINESS PLAN

Hydro Ottawa is seeking approval from the Ontario Energy Board (OEB) for the distribution rates that will be charged to customers for the 2021-2025 period.

The electricity industry in Ontario is regulated by the OEB. One of the OEB's roles is to review the business and distribution plans of all electricity distributors and approve the rates that they charge customers.

Between 2016 and 2020, Hydro Ottawa invested in distribution system capacity as well as the replacement of aging infrastructure to maintain operational effectiveness and efficiency. Upgrades to our fibre optic network and Customer Care and Billing System were also a focus, in addition to consolidating employees in two new buildings from end-of-life facilities.

HOW DOES HYDRO OTTAWA PLAN?

Hydro Ottawa is proposing a plan that is responsive to:

Legal and regulatory requirements by continuing to meet our obligations.

Internal business planning based on expert analysis and professional judgment to develop construction and operations programs that address safety, business, technical, and operational needs.

Customer feedback collected throughout our consultation on the application and ongoing customer engagements.

Over the course of 2021 to 2025, Hydro Ottawa will need to continue to invest in our infrastructure, equipment, and workforce.

These needs are being driven by a diverse set of factors, such as aging infrastructure, sustained population and economic growth in the Ottawa area, an increasing number of severe weather events, technological evolution, cyber security threats, and workforce retirements. The plan forward includes major asset replacement and upgrades, vehicle replacements, systems and software for resource planning programs, data analytics, and productivity improvements.

To learn more about Hydro Ottawa's plan, please see Exhibit 1-1-9 Business Plan in the application.

As a result, key initiatives that we have planned include:

- Building new distribution stations in growing areas of the city
- Connecting thousands of new customers every year
- Supporting local infrastructure projects like Light Rail Transit
- Upgrading and modifying infrastructure to enhance reliability and capacity on the grid
- · Replacing equipment that has reached end-of-life
- Strengthening the grid's ability to withstand the effects of severe weather
- Investing in digital solutions to enhance customer service
- Renewing our vehicle fleet
- Recruiting and retaining a new generation of highly-skilled employees

HOW CUSTOMERS HELPED INFORM OUR PLAN

Our goal is to put the customer at the centre of everything we do. Hydro Ottawa is committed to engaging with our customers, understanding their needs and preferences, and operating in an efficient and cost effective manner. In preparing our business plan, we reached out directly to customers, to better understand their priorities and expectations for the electricity services they receive. Price, reliability, and investing in new technology ranked as the top three priorities.

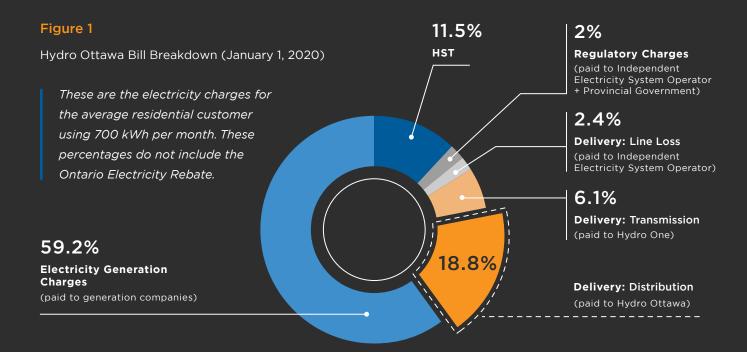

Together with the customer feedback that we receive on an ongoing basis, we took this input and developed a plan emphasizing four principles:

- 01 Minimize rate increases
- O2 Maintain reliability and service quality
- O3 Address key pressures to the distribution system
- Make prudent investments in emerging technologies to enhance service offerings and/or reduce operating costs

Nearly 21,000 customers shared their thoughts on our preliminary plan through the completion of an online survey. The majority of residential customers (83%), small business customers (76%), and mid-market and key account customers (69%) shared that they supported Hydro Ottawa's planned increase or even spending a bit more to improve service based on the priorities above.

To learn more on how Hydro Ottawa engages customers and responds to their needs, please see Exhibit 1-2-1 Customer Engagement in the application.

Electricity distributors like Hydro Ottawa are funded through the distribution rates paid by customers. We do not receive taxpayer money to fund our operations or investments in the distribution system. While Hydro Ottawa is responsible for collecting payment for the entire electricity bill, we retain only a portion of the delivery charge representing less than 20% of the bill.

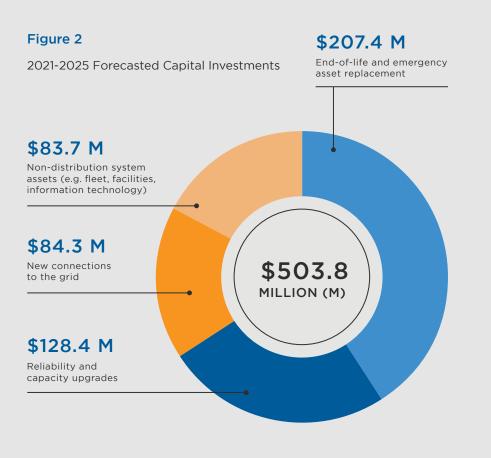

DOLLARS AND CENTS - EXPECTED COSTS OF THE PLAN

Like most businesses, Hydro Ottawa manages both a capital and an operating budget.

Capital expenditures are assets that have lasting benefits over many years (e.g. poles and wires), while operating expenditures are recurring expenses in day-to-day management of the company (e.g. tree trimming and billing).

For the 2021-2025 period, the capital required to maintain system reliability and safety, and invest in infrastructure and equipment priorities is \$503.8 million. For operations, a budget of \$493.8 million is needed.

In order to move forward with our proposals, we're seeking approval from the OEB to change our rates.

The expected impacts on the distribution portion of customer bills over the five-year rate period are shown in the table below.

Impacts on Customers' Distribution Rates

	Change in Distribution Charge	2021 Proposed	2022 Proposed	2023 Proposed	2024 Proposed	2025 Proposed	Average
Residential	\$/month	\$1.98	\$1.88	\$1.54	\$0.99	\$0.62	\$1.40
	Annual % Change	6.91%	6.15%	4.74%	2.91%	1.77%	4.49%
General Service (<50 kW)	\$/month	\$2.89	\$5.02	\$4.48	\$3.05	\$2.26	\$3.54
	Annual % Change	4.05%	6.76%	5.65%	3.64%	2.60%	4.54%

DELIVERING VALUE FOR MONEY - EXPECTED BENEFITS FOR CUSTOMERS

Moving forward on our five-year plan will enable us to maintain a high level of reliability for customers, while ensuring that we keep costs low and continuously improve the way we do business.

Some of the ways in which customers and communities are expected to benefit from the proposals in our plan include the following:

- Improved system reliability (fewer and shorter outages, quicker restoration times, enhanced resilience to severe weather)
- Greater electricity supply capacity for growing areas of the city
- Greater personalization, choice, convenience, and self-serve capability in the services provided to customers
- More options and solutions to help customers manage and monitor energy use with ongoing development of the Hydro Ottawa app and MyAccount
- · Stronger protections for grid assets and customer data against cyber threats
- · Increased ability to connect more renewable energy resources to the grid
- Lower costs, relative to alternative investment scenarios

HAVE YOUR SAY

The OEB will review
Hydro Ottawa's plan and
proposed rates in an open and
transparent public process.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 1 of 33

UPDATED EXECUTIVE SUMMARY

2

1

3 1. INTRODUCTION

This Schedule provides a summary of Hydro Ottawa Limited's ("Hydro Ottawa" or "the utility") application to the Ontario Energy Board ("OEB") seeking approval of its proposed distribution rates and other charges for the five-year period of January 1, 2021 to December 31, 2025. This application ("Application") is submitted pursuant to section 78 of the *Ontario Energy Board Act,* 1998. In preparing this Application, Hydro Ottawa has been guided by the provisions set forth in the *Chapter 2, Chapter 3*, and *Chapter 5 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing Requirements"), as well as the *Handbook for Utility Rate Applications* issued in 2016.

12

Herein, Hydro Ottawa highlights the key elements of this Application. These include the business, capital, and operational plans that underpin the Application, and the corresponding funding that is required to enable the utility to continue providing efficient and reliable services, along with a first-class customer experience, to Hydro Ottawa customers. This Schedule likewise explains how these plans align with customer needs and expectations, as well as what types of impacts are expected on customers' bills. For details on the specific approvals that Hydro Ottawa is requesting from the OEB by way of this Application, please see UPDATED Exhibit 1-1-4: Administration and UPDATED Attachment 1-1-4(A): OEB Appendix 2-A - List of Requested Approvals.

22

This Application employs the Custom Incentive Rate-setting ("Custom IR") method and marks the second successive rate filing in which Hydro Ottawa has opted to avail itself of this particular rate-setting approach.

26

Looking ahead to the 2021-2025 term, Hydro Ottawa anticipates a sustained need to undertake significant levels of capital investment in its distribution system, in order to maintain reliability and service quality for its customers. This need is the result of several factors, including aging

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 2 of 33

infrastructure, an expanding customer base, continued growth across the City of Ottawa, and the effects of severe weather events. With respect to operational requirements, the utility likewise continues to face numerous pressures, such as ongoing shifts in consumer expectations for innovative services, the evolution of mission critical technologies, increased penetration of distributed energy resources ("DERs"), and workforce retirements. Together, these and other challenges are driving the need for investments and solutions which will ensure that overall system performance is maintained and customer preferences are met – all while safeguarding rates at a reasonable level. Accordingly, as described further below and elsewhere in this Application, the Custom IR method remains the most suitable rate-setting option to govern the approaching rate period for the utility.

11

The rate plan set forth in this Application builds upon the scope and success of the Custom IR plan that Hydro Ottawa has been implementing over the course of the 2016-2020 period. Numerous milestones have been achieved in the execution of this plan. Foremost was the roll-out of a multi-year Customer Experience Roadmap, which was anchored in the twin imperatives of putting the customer at the centre of everything that Hydro Ottawa does and facilitating a customer experience that is driven by customer choice. Among the flagship deliverables in this initiative were enhancements to the Customer Contact Centre (including becoming one of the first distributors in Ontario to expand its hours of operation into Saturdays), deployment of omni-channel capabilities and self-serve features to support customer communication through preferred channels, introduction of a mobile application, achievement of the highest level of customer participation in online billing of any distributor in Ontario, and the launch of voice-activated digital assistance through such devices as Amazon Alexa and Google Home (the first of its kind by any electric utility in Canada). Concurrent with the implementation of this roadmap, Hydro Ottawa consistently received high marks from its customers in the annual surveys that were commissioned to measure customer satisfaction with the utility.

27

28 Under its 2016-2020 rate plan, Hydro Ottawa has also crossed a new frontier in terms of operational effectiveness. As of the end of 2019, the utility was on track to successfully execute

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 3 of 33

the largest multi-year capital expenditure plan in its history, with significant progress made in replacing a large portion of assets at the end of their useful lives, connecting new customers to the grid, and enhancing system capacity to keep pace with shifts in loads within the service territory. These expenditures have translated into improved system reliability and performance, with the utility having consistently met or exceeded its reliability targets over the 2016-2018 timeframe. In fact, over the course of 2016-2018, Hydro Ottawa met or exceeded each of the measures in the annual Electricity Utility Scorecard for which a target had been assigned, with 100% of those measures showing performance improvement or consistent trending. Moreover, the outage management and emergency restoration capabilities of the utility were put to the test during several significant extreme weather events – the most damaging of which was the unprecedented series of tornadoes that touched down in Hydro Ottawa's service territory in September 2018. While challenging, these events nevertheless presented the opportunity for the utility to demonstrate its organizational and operational strength, depth, and maturity. The positive response from customers and the community attested to the success of these efforts.

15

Hydro Ottawa also successfully completed a once-in-a-generation project to consolidate the majority of its employees into new administrative and operations facilities. This project was executed pursuant to approval granted by the OEB in its Decision and Rate Order on Hydro Ottawa's 2016-2020 Custom IR application. For more background information, including a detailed justification of the prudency of the costs incurred by the utility in the completion of this project, please see UPDATED Attachment 2-1-1(A): New Administrative Office and Operations Facilities.

23

4 Other noteworthy performance outcomes from 2016-2020 included the following:

2526

27

 Productivity gains through cost containment and increased automation of business processes;²

²⁸ Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015).

 ² Several productivity initiatives have enabled Hydro Ottawa to seek a reduction in specific customer charges for the
 ² Several productivity initiatives have enabled Hydro Ottawa to seek a reduction in specific customer charges for the
 ² 2021-2025 rate term. Please see UPDATED Exhibit 8-7-1: Specific Service Charges for details.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 4 of 33

- Successful delivery of conservation programs to customers;
- Greater efficiencies in maintenance and construction work;
- Upgrades to core business systems (including migration to cloud-based platforms);
 - Implementation of a formal cyber security program;
 - Replenishment of the workforce through execution of a Talent Management Strategy;
- Expansion of the fibre telecommunications network to connect field area devices with
 select substations; and
 - Financial returns consistent with approved Return on Equity ("ROE") levels.

9

8

4

5

10 It merits observation that Hydro Ottawa achieved the aforementioned outcomes and their 11 attendant benefits against the backdrop of approximately 6.0% growth in total customer count 12 during the 2016-2020 period, and of successful efforts to ensure no net increase in overall 13 permanent full-time employee headcount.

14

In light of its best-in-class performance in many areas, Hydro Ottawa received numerous industry and professional awards during the 2016-2020 period, with recognition extended in the contexts of customer programs, human resources and safety innovation, corporate social responsibility, and best employer (among others).

19

Hydro Ottawa is confident that the accomplishments of the 2016-2020 rate term will position the utility for continued success in delivering value to customers and meeting their needs for reliable, responsive, and cost-effective services over the upcoming five-year period. As they did in the preceding rate plan, customer engagement, continuous improvement, and performance measurement will remain hallmarks of Hydro Ottawa's planned activity for 2021-2025. Productivity expectations and initiatives are embedded throughout the plans underpinning this Application, alongside a robust framework for tracking and measuring outcomes, much of which is informed by the benchmarking of Hydro Ottawa's performance in several key program areas.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 5 of 33

1 2. ABOUT HYDRO OTTAWA

2 Hydro Ottawa is licensed by the OEB to distribute electricity to approximately 340,000 customers, as of the end of 2019, within the City of Ottawa and the Village of Casselman. By number of customers, Hydro Ottawa is the third largest municipally-owned electricity distributor in Ontario. Its service territory covers 1,116 square kilometres and is comprised of a dense urban core, large areas of suburban development, and a vast rural area that represents 60% of the overall footprint.

8

9 Hydro Ottawa and its predecessor utilities have proudly served communities in the National 10 Capital Region for over 100 years. The utility's unique customer base includes residential 11 customers, commercial businesses, farms, and large institutional and industrial customers. As 12 the national seat of government, Ottawa is home to the federal parliament and key institutions 13 within the Government of Canada. Moreover, in terms of population, the city serves as the 14 second largest in the Province of Ontario and the sixth largest in the country.

15

In its current corporate structure, Hydro Ottawa serves as the successor to five utilities which consolidated in the year 2000 (Ottawa Hydro, Kanata Hydro, Gloucester Hydro, Nepean Hydro, and Goulbourn Hydro), following the amalgamation of several municipalities in the region and the formation of the City of Ottawa. In 2002, the service territory of Casselman Hydro was acquired.

21

Hydro Ottawa is a wholly-owned subsidiary of Hydro Ottawa Holding Inc., which is 100% owned by the City of Ottawa and governed by an independent Board of Directors.

24

25 3. HYDRO OTTAWA'S BUSINESS PLAN

In accordance with the OEB's *Handbook for Utility Rate Applications*, Hydro Ottawa has prepared a formal Business Plan that serves as the basis for the utility's overall strategy and goals, elucidates the intersection between these goals and the proposals set forth in this Application, and speaks to the benefits that will accrue to customers as a result of the plan's

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 6 of 33

1 execution. This Business Plan was approved by Hydro Ottawa's Board of Directors on

2 November 28, 2019 and is included in this Application as **UPDATED** Exhibit 1-1-9.

3

4 3.1 CORPORATE VISION & STRATEGIC OBJECTIVES

- 5 Hydro Ottawa's vision is to serve as a leading partner in a smart energy future and as the 6 trusted energy advisor for customers. In order to achieve this vision, the utility has organized its
- 7 business strategy for several years around four critical areas of focus and their accompanying
- 8 strategic objectives. Hydro Ottawa will maintain continuity in these core objectives heading into
- 9 the 2021-2025 period. The key rationale for this approach is the level of success achieved
- 10 during the preceding five-year rate term, as well as the trajectory of the business and policy
- 11 landscape in which Hydro Ottawa operates.

12

- 13 Accordingly, as denoted in Figure 1 below, the business objectives that will guide Hydro
- 14 Ottawa's activities and investments throughout the 2021-2025 rate period will be the following:

15 16

• **Customer Value:** we will deliver value across the entire customer experience by providing reliable, responsive, and innovative services at competitive rates.

1718

19

20

21

• **Financial Strength:** we will create sustainable growth in our business and our earnings by improving productivity and pursuing business growth opportunities that leverage our strengths – our core capabilities, our assets, and our people.

2223

 Organizational Effectiveness: we will achieve performance excellence by cultivating a culture of innovation and continuous improvement.

2526

27

24

• Corporate Citizenship: we will contribute to the well-being of the community by acting at all times as a responsible and engaged corporate citizen.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 7 of 33

1

Figure 1 – Corporate Strategic Objectives

2

- 3 Of these objectives, the most important driver for Hydro Ottawa's business strategy will remain
- 4 Customer Value, with the utility striving to put the customer at the centre of everything it does.

5

6 3.2 ALIGNMENT WITH THE RENEWED REGULATORY FRAMEWORK

7 The primary objectives animating Hydro Ottawa's corporate vision are wholly consistent with the 8 main performance outcomes promoted under the OEB's Renewed Regulatory Framework 9 ("RRF"). Hydro Ottawa views this broad alignment as a competitive advantage and remains 10 committed to firmly entrenching RRF principles and objectives throughout its operations and

12

11 business.

Table 1 below illustrates the alignment between the utility's overarching objectives and the key categories of performance outcomes under the RRF. For additional context, the table also shows the congruence of Hydro Ottawa's high-level performance goals and strategic outcomes – which are utilized to measure progress in achieving the strategic objectives – with the RRF's areas of focus.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 8 of 33

Table 1 – Alignment of Hydro Ottawa's Corporate Areas of Focus and Strategic Objectives with the OEB's RRF Performance Outcomes

ОЕВ		Hydro Ottawa	
RRF Performance Outcomes	Key Area of Focus	Corporate Performance Goal	Strategic Outcome
Customer Focus	Customer Value	 Assist customers in managing their energy consumption and electricity costs Deliver on customer expectations for service quality and responsiveness Maintain overall distribution system reliability 	Customer loyalty and satisfaction
Operational Effectiveness	Organizational Effectiveness	Continue to enhance operational performance and productivity Maintain leading health and safety record Enhance organizational and employee capability	 Efficient and effective operations Safe and healthy work environment Engaged, aligned and prepared workforce
Public Policy Responsiveness	Corporate Citizenship	 Enhance our brand image in the community and the industry Continue to improve our environmental performance and reduce our impact on the environment 	 Leading governance and business practices Engaged stakeholders Safe, secure and environmentally responsible services Positive community impact
Financial Performance	Financial Strength	Grow revenues from new sources Enhance / protect revenues from existing business lines	Growth in shareholder value

3

1

2

- 4 Further detail with respect to Hydro Ottawa's alignment with the RRF can be found in UPDATED
- 5 Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework.

6

7 3.3 CUSTOMER ENGAGEMENT

- 8 The integration of customer feedback and providing customers with value for money serve as
- 9 cornerstones of Hydro Ottawa's business planning. In step with its overall business strategy to
- 10 put the customer at the centre of everything it does, the utility endeavours to ensure that its
- 11 capital and operational investment plans are guided and informed by customer needs,
- 12 preferences, and priorities.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 9 of 33

1 Hydro Ottawa avails itself of numerous tools, activities, and interactions to engage customers 2 and to reflect their input in the utility's planning and plans. Foremost among these are the engagement initiatives that are administered on an ongoing basis. These represent an evergreen posture on Hydro Ottawa's part to develop a genuine understanding of customers' interests through a fluid and continuous feedback loop, which helps inform and sharpen the utility's service delivery as a matter of established routine. Several of these activities are in line 7 with industry best practice, such as an annual customer satisfaction survey, formal Key Accounts program, and engagement in numerous social media platforms. Other activities are homegrown, having been formulated and customized to suit the particular needs of the utility and its unique customer base. These include project-specific consultations that are hosted by Hydro Ottawa when major distribution system projects have the potential to impact customers and their community. Based on customer feedback, these consultations have resulted in the evaluation of additional design options, the use of less impactful equipment, and/or the collaborative scheduling of mutually agreeable timelines for project completion. Other examples include surveys that are conducted each month of customers who contact Hydro Ottawa's contact centre. Each customer is contacted and invited to rate their customer service experience. Through analysis and monitoring of these results, Hydro Ottawa is able to identify areas for improvement and adapt its processes to respond to customer preferences.

19

As a complement to the foregoing activities, Hydro Ottawa undertook targeted customer outreach to inform the development of the specific plans and proposals set forth in this Application. Consisting of a mix of qualitative and quantitative methodologies, this engagement was launched in January 2019 and extended through September 2019.

24

The initial phase yielded consistent findings across low-volume customer classes – namely, that reliability, prices, and investment in new technology constituted the top three priorities for customers. Moreover, these customers generally held favourable views on making proactive investments in aging infrastructure and grid modernization at the present time, with the understanding that this may lead to near-term costs but will result in future savings.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 10 of 33

Based upon the feedback received during Phase I, Hydro Ottawa undertook a second, more expansive phase of engagement, in which the utility surveyed customers for their detailed feedback on proposed plans for capital and operational investments over the 2021-2025 period. A series of expenditure options were presented – namely, a reference case outlining the utility's proposed course of action, along with scenarios which either accelerated and expanded the proposal, or which scaled back the scope and timing of the proposal. Customers were thus able

7 to express their views on a range of alternative proposals, as well as the respective trade-offs,

8 outcomes, and rate impacts.

9

Ultimately, the response from customers in all classes was heavily weighted in support of Hydro
Ottawa's proposed plans or spending more than proposed for certain services. Nearly one-half
of respondents in the residential, small business, and mid-market and Key Account classes
(48%, 47%, and 46%, respectively) identified that Hydro Ottawa should maintain the forecasted
annual increase to deliver a program which focuses on the stated priorities. An additional 35%,
29%, and 23% of customers in these segments, respectively, expressed support for further
improvements in service, even if this entailed additional rate increases.

17

Of note, the number of customers who participated in this engagement exercise – nearly 21,000 in total – was the largest in the history of any Hydro Ottawa rate application. In itself, this result was encouraging and instilled confidence in the quality of the information gleaned and the representativeness of the sample pool of customers. Beyond this, however, Hydro Ottawa was buoyed by the fact that the rate of response (i.e. number of respondents as a percentage of the total customer base) exceeded that which was observed in the most recent rate filings from the three largest distribution utilities in Ontario.³ In fact, according to the external vendor retained by Hydro Ottawa to help execute the customer consultation process, the utility's engagement

_

29 EB-2019-0018 (May 28, 2019).

²⁶ ³ Hydro One Networks Inc., 2018-2022 Custom Incentive Rate-setting Distribution Rate Application, EB-2017-0049

^{27 (}March 31, 2017); Toronto Hydro-Electric System Limited, 2020-2024 Custom Incentive Rate-setting Distribution Rate

²⁸ Application, EB-2018-0165 (August 15, 2018); and Alectra Utilities Inc., 2020 Electricity Distribution Rate Application,

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 11 of 33

- 1 represented the single largest proportion of customers ever engaged by an electricity distributor
- 2 in Ontario for the purpose of informing the development of a rate application.⁴

3

- 4 Based upon customer feedback, Hydro Ottawa has crafted capital and operational plans that
- 5 emphasize the following four core principles:

6 7

8

11

- Minimize rate increases
- 2. Maintain reliability and service quality
- 9 3. Address key pressures to the system, including:
- Aging infrastructure
 - An expanding customer base and continued population growth
- The effects of severe weather events
- Make prudent investments in emerging technologies to enhance service offerings
 and/or reduce operation costs

15

- 16 Additional information on the portfolio of Hydro Ottawa's customer engagement activities, as
- 17 well as the targeted activities undertaken to consult customers on the development of this
- 18 Application, is available in Exhibit 1-2-1: Customer Engagement Overview and Exhibit 1-2-2:
- 19 Customer Engagement on the 2021-2025 Rate Application.

20

21 3.4 DISTRIBUTION SYSTEM PLAN

- 22 Hydro Ottawa's Distribution System Plan ("DSP") represents the culmination of multiple internal
- 23 and external planning processes related to business strategy, customer engagement, capital
- 24 investment, asset management, and regional planning. The DSP details how distribution system
- 25 expenditures will be prioritized, paced, and optimized, while minimizing rate impacts for
- 26 customers and facilitating continuous improvement and productivity.

27

28 The DSP in its entirety can be viewed in Exhibit 2-4-3.

- -

²⁹ ⁴ Attachment 1-2-2(A): Customer Engagement Report, page 2.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 12 of 33

1 3.5 PERFORMANCE MANAGEMENT AND MEASUREMENT

- 2 Hydro Ottawa is committing to a robust performance measurement and reporting framework for
- 3 the upcoming five-year rate period. This framework expands and builds upon the success of the
- 4 one that was in place for 2016-2020, and will maintain the approach of combining standard OEB
- 5 performance measures with others that are customized for Hydro Ottawa's unique use.

- 7 An integral component of this framework is the set of measures that will form the basis of Hydro
- 8 Ottawa's 2021-2025 Custom Performance Scorecard (see Table 2 below). These measures
- 9 have been selected based upon a variety of factors and drivers, including responsiveness to
- 10 customer preferences, alignment with core RRF and corporate strategic objectives, and
- 11 correlation to key findings from the benchmarking analyses performed in support of this
- 12 Application.

1

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 13 of 33

Table 2 - Custom Performance Scorecard Measures for 2021-2025

Outcome	OEB Reporting Category	Hydro Ottawa Custom Measures	New/Existing	Target
	Customer Satisfaction	Contact Centre Satisfaction – Transactional Feedback	New	Maintain
Customer Focus		Number of MyAccount Customers	New	Increase
	Cationaction	Number of Online Billing Accounts	New	Increase
Safety		All Injury/Illness Frequency Rate	New	Reduce
	Salety	Lost Workday Severity Rate	New	Reduce
		Customer Average Interruption Duration Index	Existing	Monitor
		Feeders Experiencing Multiple Sustained Interruptions	Existing	Maintain
		Worst Feeder Analysis – Number of Feeders with Very Poor Performance	Existing	Reduce
		Stations Exceeding Planning Capacity	Existing	≤5%
	System Reliability	Feeders Exceeding Planning Capacity	Existing	≤10%
		Stations Approaching Rated Capacity	Existing	0%

	Cost Control	Productive Time	Existing	Maintain
		Labour Allocation	Modified	Maintain
		3-Year Average Cost per Pole – Wood Pole Replacement	New	Monitor
		3-Year Average Cost per Meter – Underground Cable	New	Monitor
		Average Cost per Kilometer – Vegetation Management	New	Monitor
		Average Cost per Pole – Pole Test and Inspection	New	Monitor
	Asset Efficiency	Technology Infrastructure Cost per Employee	New	Monitor
B 10 B 0		Annual Oil Spills & Costs of Remediation	Existing	Reduce
Public Policy Responsiveness	Environment	Non-Hazardous Waste Diversion Rate	New	Maintain
		Percentage of Green Suppliers	New	Maintain
		OM&A per Customer	New	Monitor
Financial	Financial Metrics	Bad Debt as a Percentage of Total Electricity Revenue	New	Monitor
Performance	Tillariolar Wictiles	Cumulative Capital Additions per Investment Category	New	Monitor
		Annual Capital Spending per Investment Category	New	Monitor

- 3 This proposed reporting regime is intended to equip the OEB, customers, and other
- 4 stakeholders with the ability to better monitor and understand diverse aspects of Hydro Ottawa's

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 14 of 33

1 performance, and to demonstrate the utility's accountability in transparently communicating the

2 outcomes achieved under its performance management framework.

3

4 3.6 BENCHMARKING

5 The preparation of Hydro Ottawa's business plan was supported by year-over-year comparisons

6 of Hydro Ottawa's costs and outcomes, along with evaluations of the utility's performance

7 against its peers. The scope and substance of particular capital and operational programs were

8 shaped, in part, by the analysis of trends in the achievement of system reliability, customer

9 value, and financial strength outcomes. Similarly, the benchmarking of Hydro Ottawa's

10 expenditures and performance relative to samples of utilities across Ontario, Canada, and the

11 United States has yielded valuable insights into areas in which the utility performs well and

12 those in which there is room for improvement.

13

14 To help inform the development of its business plan, the utility commissioned the following

15 benchmarking studies from third-party experts:

1617

Table 3 – Benchmarking Studies Filed in this Application

Benchmarking Review	External Consultant	Application Attachment
Econometric Benchmarking Study of Hydro Ottawa's Total Cost and Reliability	Clearspring Energy Advisors	Attachment 1-1-12(A)
Unit Costs Benchmarking Study	UMS Group	Attachment 1-1-12(B)
IT Budget Assessment Benchmark	Gartner	Attachment 1-1-12(F)
2019 Market Benchmarking	Mercer Canada	Attachment 1-1-12(G)

18

19 The results from these studies consistently revealed that Hydro Ottawa is a strong performer

20 relative to its peers in numerous categories, and that the utility is well-positioned to sustain

21 ongoing improvements in key areas of performance.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 **UPDATED** May 5, 2020 Page 15 of 33

1 These findings have been internalized and incorporated into specific work programs, and will

2 serve as important baselines and points of reference against which to measure the utility's

progress. 3

4

PRODUCTIVITY & CONTINUOUS IMPROVEMENT

6 Responsibly controlling costs and focusing on cost-effective delivery of outcomes that matter to 7 customers remain core priorities for Hydro Ottawa. Amidst the unique and challenging confluence of compounding demands, pressures, and constraints on operations, the utility is placing increased emphasis on incorporating productivity and continuous improvement gains, so as to offset increasing expenditures and boost organizational capacity. Hydro Ottawa has adopted numerous controls to provide the OEB, customers, and other stakeholders with robust assurance that productivity, cost control, and continuous improvement objectives have been firmly integrated into the utility's business planning process, and the resultant capital and 14 operational plans, for the 2021-2025 rate period.

15

16 For information on the range of productivity and continuous improvement activities that are planned over the course of the upcoming rate term, please see Exhibit 1-1-13: Productivity and Continuous Improvement Initiatives.

19

HYDRO OTTAWA'S CUSTOM IR APPLICATION 20 4.

As noted in the OEB's 2012 report entitled Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach ("RRFE Report"), the Custom IR method is "intended to be customized to fit the specific applicant's circumstances" and "may be 24 appropriate for distributors with significantly large multi-year or highly variable investment

25 commitments with relatively certain timing and level of associated expenditures."6

²⁶ Ontario Energy Board, Report of the Board - Renewed Regulatory Framework for Electricity Distributors: A

²⁷ *Performance-Based Approach* (October 18, 2012), page 19. 28 ⁶ *Ibid*, page 14.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 16 of 33

1 4.1. PRINCIPAL DRIVERS JUSTIFYING THE USE OF CUSTOM IR

The foregoing description of the suitable context for employing the Custom IR option is one which remains applicable to Hydro Ottawa, as it prepares to enter into a new five-year rate period. The results of the utility's asset management and network investment planning processes have confirmed that significant capital investments are required over the course of 2021-2025, in order to ensure Hydro Ottawa is able to deliver safe and reliable electricity service and to meet the needs and expectations of customers.

8

9 The drivers underlying this need are numerous. For starters, while the overall profile of Hydro Ottawa's asset demographic is positive, a major segment of the asset population (19%) has 11 reached its expected service life and thus poses a higher risk of failure. This includes 12 approximately 51% of stations and 23% of overhead system assets (i.e. poles, transformers, 13 and switches). Alongside these asset demographic figures, the utility's asset demographic 14 ratings show that 17% of assets are in Poor or Very Poor condition.⁷

15

What's more, the City of Ottawa continues to experience steady year-over-year growth, with municipal policy promoting the development of new residential subdivisions and business parks, as well as intensification in urban areas.

19

In addition, an increase in storms and severe weather events is placing greater stress on the system, with an upward trend over the last five years in the number of outages caused by adverse weather. During a six-month span in 2018 alone, there were three major weather events that affected the Ottawa area (tornadoes, flooding, and freezing rain), which in turn caused considerable damage to the system and heavily impacted spending in emergency replacement of assets.

-

Please see Exhibit 2-4-3: Distribution System Plan for more information on the demographics and condition of the
 utility's assets.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 17 of 33

1 4.2. CAPITAL EXPENDITURES

2 Hydro Ottawa developed its forecasted capital expenditures for the years 2021-2025 based 3 upon an identification and analysis of system needs, customer expectations, and requirements 4 for general plant capital. The total capital expenditure forecast underwent a number of iterations 5 and refinements, in order to address issues of priority, customer preference, rate and bill

6 impacts, resource capacity, and financing capability.

7

In response to feedback expressed by customers, appropriate parameters and constraints have been incorporated to limit the costs and impacts on bills associated with planned capital investments. In its customer engagement activities, Hydro Ottawa heard a recurring preference for reliability to be maintained or improved at minimal or no increased cost. As a result, the utility has created a capital plan that paces investments in order to minimize rate impacts, with a focus on continuous improvement with respect to the efficiency and productivity of distribution planning and plan implementation.

15

One practical effect of this approach is that the proposals set forth in this Application do not encompass all of the investments that Hydro Ottawa would deem to be worthwhile for purposes of optimally fulfilling system needs during the 2021-2025 period.⁸ Nevertheless, Hydro Ottawa is confident that the portfolio of capital investments that ultimately emerged from its prioritization and calibration process will enable strong performance of the system and will serve customers' interests effectively.

22

As originally submitted, Hydro Ottawa's capital expenditure plan for the 2021-2025 period proposes an average annual expenditure of \$100.7M per year, with this figure having been slightly adjusted to \$100.8M per year based on 2019 actuals, as follows:

 ⁸ As explained further in UPDATED Exhibit 2-4-1: Capital Expenditure Summary, the process undertaken by the utility
 to rationalize its initial asset needs forecast resulted in a reduction in the 2021-2025 capital expenditure forecast of
 approximately \$50.0M per year.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 18 of 33

8 and associated attachments in Exhibit 2-4-3.

0 4.3. OPERATIONS, MAINTENANCE & ADMINISTRATION EXPENDITURES

Hydro Ottawa's duties to manage a safe and reliable distribution system, serve customers in a manner that is responsive to their needs and preferences, and maintain compliance with a broad range of legislative and regulatory requirements compel the utility to incur a level of costs that is proportionate to the magnitude of its operational obligations. Responsibly controlling

The changes reflected in the updated version of Table 4 for 2021 and 2022 are the result of updates to the MiGen project, as described in updated section 2.3.3 of Attachment 2-4-3(E): Material Investments.

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

9

6

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 19 of 33

- 1 these costs and focusing on cost-effective delivery of outcomes therefore remain core priorities
- 2 for the utility. What's more, the critical importance of cost control is magnified against the
- 3 backdrop of the evolution underway across the broader North American electricity sector, which
- 4 is forcing utilities to modernize aspects of their service delivery models in order to adapt to the
- 5 increased complexity of system operations, the changing expectations of customers, and the
- 6 shifting economics of the marketplace.

7

- 8 It is important to understand Hydro Ottawa's proposed operations, maintenance, and
- 9 administration ("OM&A") expenditures for the years 2021-2025 in the context of OM&A costs for
- 10 the 2016-2020 Custom IR rate period, as presented in Table 5 below.

11

12 Table 5 – AS ORIGINALLY SUBMITTED – Historical, Bridge, and Test Year OM&A Costs by Major OM&A Category (\$'000s)

		Historical		Brid	ge	Test

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 **UPDATED** May 5, 2020 Page 20 of 33

1 Table 5 – UPDATED FOR 2019 ACTUALS – Historical, Bridge, and Test Year OM&A Costs by Major OM&A Category (\$'000s)

		Hist	orical		Bridge	Test	
OM&A Category	2016	2017	2018	2019	2020	2021	CAGR ¹²
Operations	\$18,399	\$18,860	\$20,877	\$20,863	\$23,824	\$22,924	4.5%
Maintenance	\$9,739	\$10,299	\$9,125	\$7,693	\$9,767	\$9,855	0.2%
Subtotal	\$28,138	\$29,158	\$30,003	\$28,556	\$33,591	\$32,779	3.1%
Billing and Collecting	\$12,594	\$12,745	\$11,941	\$10,873	\$12,052	\$12,711	0.2%
Community Relations	\$5,290	\$5,120	\$4,759	\$4,796	\$5,895	\$6,365	3.8%
Subtotal	\$17,884	\$17,865	\$16,700	\$15,670	\$17,946	\$19,076	1.3%
Administrative and General	\$36,599	\$35,222	\$40,161	\$38,887	\$40,453	\$42,068	2.8%
TOTAL OM&A EXPENSES ¹³	\$82,621	\$82,245	\$86,863	\$83,113	\$91,990	\$93,923	2.6%

4 Based on the proposed costs for the 2021 Test Year, OM&A expenditures for the remaining

5 years of the 2021-2025 Custom IR period have been calculated through the application of an

6 escalation factor, which is discussed in further detail in section 4.4 below. The result is the

7 breakdown of OM&A costs shown in Table 6.

Table 6 – Annual OM&A Program Expenditures for 2021-2025 (\$'000s)

2021	2022	2023	2024	2025
\$93,923	\$96,280	\$98,697	\$101,174	\$103,714

11 Hydro Ottawa's proposed OM&A costs over the 2021-2025 term translate into an average 12 annual expenditure of \$98.8M.

14 Of note, during the internal budgeting process, the initial levels of OM&A submitted by the

15 various Divisions within the utility resulted in a compound annual growth rate ("CAGR") of 3.5%

16 over the 2021-2025 period. In step with its commitment to continuous improvement and with

17 12 CAGR represents the compound annual growth rate between 2017 and 2021.

^{18 &}lt;sup>13</sup> Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 21 of 33

1 customer preferences for minimizing rate increases, Hydro Ottawa then applied a custom

2 OM&A escalation factor to contain upward pressure on operational expenses and to embed

3 productivity expectations throughout the 2021-2025 period. This lowered the overall OM&A

4 CAGR to 2.51% and achieved a reduction of \$13.1M in OM&A spending over the course of the

5 rate term.

6

7 For additional information on Hydro Ottawa's OM&A programs, cost drivers, and year-over-year

8 variances, please see **UPDATED** Exhibit 4-1-1: Operations, Maintenance and Administration

9 Summary and UPDATED Exhibit 4-1-4: Operations, Maintenance and Administration Cost

10 Drivers and Program Variance Analysis.

11

12 4.4. CUSTOM PRICE ESCALATION FACTOR

As established by the RRF, under a price cap form of incentive rate-setting, rates are adjusted using a formulaic approach in the years following the first year base rates. This formula consists of a two-component Price Cap Index ("PCI"): inflation and productivity. For electricity distributors, the formula includes an industry-specific inflation factor and two factors for productivity. One productivity factor is a fixed amount for industry-wide productivity, and the other is a stretch factor which is set each year based on the level of productivity the distributor has achieved as evaluated by the Pacific Economics Group ("PEG") econometric model.

20

1 Under a Custom IR approach, the annual rate adjustment must be based on a custom index

22 supported by empirical evidence that can be tested. The annual adjustment must include explicit

financial incentives for continuous improvement and cost control targets. As noted in the OEB's

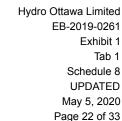

24 Handbook for Utility Rate Applications, "these incentive elements, including a productivity factor,

25 must be incorporated through a custom index or an explicit revenue reduction over the term of

26 the plan (not built into the cost forecast)."14

27

²⁸ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 25.

As a result, for years two through five of its upcoming rate term (i.e. 2022-2025), Hydro Ottawa is proposing to adopt a Custom Price Escalation Factor ("CPEF") framework, which is based on the approach approved by the OEB in Hydro Ottawa's 2016-2020 Custom IR application. This framework is aligned with OEB policy and based on sound ratemaking principles, and incorporates the OEB's key principles and expectations of a Custom IR application.

6

7 Hydro Ottawa is proposing that OM&A costs in years two through five of its rate term be adjusted by the CPEF, on an annual basis, as follows:

9

10 **CPEF = I - X + G**

11

12 where

13

14 "I" is the inflation factor

15 "X" is the two-component productivity factor

16 "G" is the growth factor

17

18 Using this formula, Hydro Ottawa has determined that the CPEF will be 2.51%.

19

20 A more detailed explanation of the CPEF and the evidence supporting the use and assigned

21 value of each factor is included in **UPDATED** Exhibit 1-1-10: Alignment with the Renewed

22 Regulatory Framework.

23

24 **4.5. RATE BASE**

- 25 As originally submitted, Hydro Ottawa's requested rate base for the 2021 test year is \$1,219M,
- 26 which represents an increase of approximately \$244.8M or 25% over the OEB-approved rate
- 27 base for the 2020 Bridge Year. After accounting for 2019 actuals, Hydro Ottawa is revising its
- 28 requested rate base for the 2021 test year to \$1,231M. This represents an increase of

²⁹ ¹⁵ Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015), page 1.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 23 of 33

approximately \$256.9M or 26% over the OEB-approved rate base for 2020. Table 7, as updated

2 below, identifies the rate base requested for each year during the 2021-2025 period. Please

3 refer to UPDATED Exhibit 2-1-1: Rate Base Overview for further details.

Table 7 – AS ORIGINALLY SUBMITTED – Summary of Rate Base (\$'000s)

	2021	2022	2023	2024	2025
Rate Base	\$1,218,659	\$1,303,922	\$1,349,619	\$1,376,805	\$1,419,763

Table 7 – UPDATED FOR 2019 ACTUALS – Summary of Rate Base (\$'000s)

	2021	2022	2023	2024	2025
Rate Base	\$1,230,736	\$1,315,708	\$1,363,582	\$1,390,890	\$1,433,972

9 4.6. REVENUE REQUIREMENT

Hydro Ottawa is requesting approval for both service and base revenue requirement for each year in its planned 2021-2025 rate term, along with the resulting rates and riders based on forecast capital expenditures, OM&A, depreciation expense, cost of capital, payments in lieu of taxes ("PILS"), and revenue from other sources. For the 2021 Test Year, Hydro Ottawa requests a service revenue requirement of \$214.9M, which represents an increase of \$14.3M or 7% from the service revenue requirement previously approved by the OEB for 2020. After accounting for 2019 actuals, Hydro Ottawa is revising its request to a service revenue requirement of \$216.6M for the 2021 Test Year, which represents an increase of \$16.1M or 8% from the service revenue requirement previously approved by the OEB for 2020.

The principal cost drivers underlying Hydro Ottawa's Test Year revenue requirement are the increases to rate base, which are attributable to capital investments that the utility must undertake in order to continue providing safe and reliable electricity service to the residents and businesses in Ottawa and Casselman. Other cost drivers include increases to amortization expense, OM&A expenses, interest, and return on rate base.

3 4.7. LOAD FORECAST

- 4 Hydro Ottawa's forecasted energy consumption for the 2021 Test Year is 7,065,745 MWh, as
- 5 originally submitted. After accounting for 2019 actuals, Hydro Ottawa's forecasted energy
- 6 consumption for the 2021 Test Year is 7,063,482. This is 377,142 MWh (5.1%) lower than the
- 7 2016 OEB-approved MWh forecast. The utility's forecasted number of customers for the 2021
- 8 Test Year is 344,936, representing an increase of 6.1% over the 2016 OEB-approved number.

Table 9, as updated below, provides a high-level summary of Hydro Ottawa's forecasted load for 2021-2025.

12

1

2025	7,176,418	357,017

4

5 Hydro Ottawa has provided a five-year detailed class-specific weather normalized load forecast

6 and customer connection forecast for each rate class in UPDATED Exhibit 3-1-1: Load

7 Forecast. This forecast incorporates modifications to the provincial electricity conservation

8 framework that were enacted by the Government of Ontario in 2019, as well as the impacts of

embedded generation.

10

11 4.8. COST OF CAPITAL

12 Cost of capital components have been determined for each year during the 2021-2025 planned

13 rate term. Hydro Ottawa has used the following debt/equity ratio for all years: 4% short-term

14 debt, 56% long-term debt, and 40% equity.

15

16 Hydro Ottawa has utilized the short-term debt rate of 2.75%, as provided in the 2020 Cost of

17 Capital Parameters letter dated October 31, 2019, for the full five-year term covered by this

18 Application. The utility has forecasted the weighted average cost of long-term debt based on the

^{19 17} Figures in this column do not include Standby Power customers.

²⁰ ¹⁸ Figures in this column do not include Standby Power customers.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 27 of 33

- 1 cost of existing embedded debt, anticipated long-term borrowing requirements, and the forecast
- 2 yield for 2021-2025 long-term debt issuances. Using the OEB's formulaic calculation, Hydro
- 3 Ottawa has also forecast an ROE for the full five-year period covered by this Application.

4

- 5 It is Hydro Ottawa's intention to provide regulatory efficiency and rate stability over the five-year
- 6 term of this Application by not making any further updates to the cost of capital components.

7

- For additional details on the cost of capital determinations and calculations employed by Hydro
- 9 Ottawa, please see UPDATED Exhibit 5-1-1: Cost of Capital and Capital Structure.

10

11 4.9. COST ALLOCATION AND RATE DESIGN

- 12 Hydro Ottawa has prepared a cost allocation model for each of the five years in the proposed
- 13 2021-2025 rate plan using the OEB's cost allocation methodologies and model. Hydro Ottawa's
- 14 2021 base revenue requirement has been allocated across the utility's nine rate classes. The
- 15 resulting revenues-to-cost ratios for each rate class were determined using the total revenues
- 16 over costs for each year, pursuant to OEB guidelines.

17

- 18 Hydro Ottawa engaged Elenchus Research Associates to undertake a Cost Allocation Model
- 19 study to determine whether refinements were necessary to better reflect the OEB's principle of
- 20 cost causality in its cost allocation to customers. The results of the study indicated that four rate
- 21 classes require adjustments to bring them within OEB-approved ranges. In this Application, the
- 22 utility is proposing the necessary adjustments to achieve this result. For more information,
- 23 please see **UPDATED** Exhibit 7-1-1: Cost Allocation.

- 25 With respect to rate design, one noteworthy feature of Hydro Ottawa's 2021-2025 rate plan is
- 26 that it marks the first five-year rate term for the utility in which distribution rates for residential
- 27 customers will be set at a fully fixed charge. Effective January 1, 2020, Hydro Ottawa completed
- 28 the transition to fully fixed rates for these customers, in accordance with the policy adopted by

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 **UPDATED** May 5, 2020 Page 28 of 33

1 the OEB in 2015. 19 As noted elsewhere, the execution of this transition has implications for the

2 presentation of information pertaining to the impacts on residential customer rates associated

3 with the proposals and plans set forth in this Application.²⁰

4

DEFERRAL AND VARIANCE ACCOUNTS 5 4.10.

6 Hydro Ottawa is proposing to clear Group 2 Accounts, including the Lost Revenue Adjustment

7 Mechanism ("LRAM") Account. The total net deferral and variance ("DVA") balance proposed for

8 disposition is \$(5,751,923), as originally submitted. Hydro Ottawa is proposing that the Rate

Riders for Group 2 Accounts (excluding LRAM) be disposed of over two years. For the LRAM

Variance Account, a one-year disposition period is proposed. As no Group 1 Accounts are being

requested for disposition at this time, the rate riders are the same for Regulated Price Plan

12 ("RPP") and non-RPP customers.

13

After accounting for 2019 actuals, Hydro Ottawa is proposing to clear Group 1 and Group 2

Accounts, including the LRAM Account. The total net DVA updated balance proposed for

disposition is \$(6,695,545). Hydro Ottawa is proposing that the Deferral/Variance Accounts Rate

Riders for Group 1 and Group 2 Accounts be disposed of over two years. Disposition of all other

rate riders is requested over a one-year period. 18

19

In this Application, Hydro Ottawa is also proposing modifications to and the discontinuance of

certain DVAs. For further such information, as well as for details on amounts proposed for DVA

22 clearances, please see **UPDATED** Exhibit 9-1-1: Summary of Current Deferral and Variance

23 Accounts and Exhibit 9-2-1: New Deferral and Variance Accounts.

24

25 **4.10.1. Capital Variance Account**

26 In this Application, Hydro Ottawa proposes to sustain the use of a variance account wherein it

27 will record, on an annual basis, the impacts on revenue requirement arising from variances

²⁸ Ontario Energy Board, *Board Policy - A New Distribution Rate Design for Residential Electricity Customers*,

EB-2012-0410 (April 2, 2015). Please see Exhibit 8-2-1: Rate Design Policy Consultation for details.

To result in the provided in the provide

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 29 of 33

between actual and forecasted cumulative capital additions. Capital additions would be tracked using three categories: System Access, System Service and System Renewal, and General Plant.²¹ The creation and use of such a variance account was sanctioned as part of the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rates. The utility believes that the administration of this capital variance account on an ongoing basis is an effective means of ensuring transparency and accountability in the planning, execution, and reporting of annual capital expenditures. By proposing the calculation of the annual variance on a cumulative basis, Hydro Ottawa's intent is to ensure that if projects are delayed, but are completed as planned at a later time, then the reduction to revenue requirement will only reflect the period of delay and will cease when the projects have been added to rate base.

11

The one modification to the capital variance account that Hydro Ottawa is proposing to introduce for the 2021-2025 period is the use of a separate sub-account for System Access capital additions. The rationale for this proposal is that capital spending in this category is driven by customer requests and is therefore difficult to predict, as the level of required expenditure is outside of the utility's control.

17

18 For additional information on the Capital Variance Account, please see Exhibit 9-2-1: New 19 Deferral and Variance Accounts.

20

21 **4.10.2**. Earnings Sharing Mechanism

In order to insulate customers from the risk of Hydro Ottawa generating excess earnings, the utility is proposing the inclusion of an earnings sharing mechanism ("ESM"). ESMs permit the sharing of utility earnings with customers when earnings rise above or fall below a certain threshold. Under an ESM, earnings may be passed along to customers in the form of rate reductions or rate offsets. Hydro Ottawa is proposing an asymmetrical ESM such that it is only

²⁷ The System Renewal and System Service categories have been merged into one category to reflect Hydro

²⁸ Ottawa's standard operating practice to shift funds between the two categories, as warranted by customer and

²⁹ operational requirements.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 8 UPDATED May 5, 2020 Page 30 of 33

- 1 proposing to share earnings that exceed a basis point threshold above the utility's ROE, with no
- 2 corresponding adjustment if its earnings fall below the basis point threshold.
- 4 The proposed ESM formula is as follows:

5

3

Table 10 – Proposed ESM Formula

#	Threshold	Treatment
1	Under earning	Borne entirely by shareholder
2	0-150 basis points	Fully retained by shareholder
3	Above 150 basis points	50/50 sharing of ratepayer/shareholder

7

Additional detail on the ESM is included in Exhibit 9-2-1: New Deferral and Variance Accounts.

9

10 **4.10.3**. **Z Factor(s)**

In its *Handbook for Utility Rate Applications*, the OEB affirmed its policy that "[a]n acceptable adjustment during a Custom IR term is a Z factor mechanism for cost recovery of unforeseen events." In step with this guideline, Hydro Ottawa intends to reserve its right over the course of the 2021-2025 rate term to file a Z factor application in order to recover costs resulting from unforeseen events, decisions, or activities, the results of which cannot be reasonably anticipated or quantified at this juncture and where the costs exceed the utility's materiality threshold. Examples include unforeseen weather events or changes to laws or regulations requiring significant implementation investment.

19

20 4.10.4. Certification of Evidence - Commodity Accounts 1588 and 1589

- 21 As per the Filing Requirements, Hydro Ottawa's Chief Financial Officer hereby certifies that the
- 22 utility maintains robust processes and internal controls for the preparation, review, verification,
- 23 and oversight of Account 1588 RSVA Power and Account 1589 RSVA Global Adjustment.

²⁵ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 27.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 3 of 42

1. INTRODUCTION

Hydro Ottawa Limited ("Hydro Ottawa" or "the utility") has prepared a formal Business Plan that serves as the basis for the utility's overall strategy and goals, highlights the intersection between these goals and the proposals set forth in its 2021-2025 Custom Incentive Rate-setting ("Custom IR") application, and speaks to the benefits that will accrue to customers as a result of the plan's execution.

This Business Plan has been prepared in conformance with the requirements set forth in the Ontario Energy Board's ("OEB") *Handbook for Utility Rate Applications*.

2. COMPANY OVERVIEW

Mission

To create long-term value for our shareholder, benefitting our customers and the communities we serve

Organizational Values

Teamwork, Integrity, Excellence, Service

Vision

Hydro Ottawa – a leading partner in a smart energy future

Hydro Ottawa is a regulated electricity distribution company serving approximately 340,000 customers within the City of Ottawa and the Village of Casselman, as of the end of 2019. As the third-largest municipally owned electrical utility in Ontario, the company maintains one of the safest, most reliable, and cost-effective electricity distribution systems in the province. Its service territory stretches 1,116 square kilometres and is comprised of a dense urban core, large areas of suburban development, and a vast rural area that represents 60% of the overall footprint.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 4 of 42

Hydro Ottawa and its predecessor utilities have proudly served communities in the National Capital Region for over 100 years. The utility's unique customer base includes residential customers, commercial businesses, farms, and large institutional and industrial customers. As the national seat of government, Ottawa is home to the federal parliament and key institutions within the Government of Canada. Moreover, the city is the second largest in the Province of Ontario and the sixth largest in the country.

The utility is a wholly-owned subsidiary of Hydro Ottawa Holding Inc., which is 100% owned by the City of Ottawa and governed by an independent Board of Directors.

3. INTEGRATED BUSINESS PLANNING & PERFORMANCE MANAGEMENT FRAMEWORK

For more than a decade, the larger corporate enterprise of which Hydro Ottawa is a member has successfully administered an integrated business planning and corporate performance management framework. This framework links the strategic and business planning, budgeting, performance measurement, management reporting, and employee alignment activities into one continuous business and improvement cycle. Applying this framework in whole, Hydro Ottawa is able to chart its course for a five-year period, implement and operate in accordance with annual plans and budgets, and monitor and report performance and progress against these plans and budgets.

In accordance with its charter, Hydro Ottawa's Board of Directors ("the Board") is responsible for developing and approving a business plan which indicates the overarching strategy that the utility intends to pursue. The Board must regularly review the integrity of the business plan. At any time, if the Board is of the opinion that the then-existing business plan is no longer appropriate, the Board – in conjunction with the Chief Executive Officer ("CEO") – must develop a revised business plan. What's more, on an ongoing basis, the Board is likewise responsible for monitoring the utility's implementation of the plan and the progress toward achieving it.

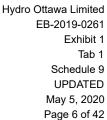

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 5 of 42

Similarly, the Board is tasked with approving the annual budget, and monitoring its progress and achievement at each regular meeting.

The key components of the integrated planning and performance management framework are as follows:

- a. An enterprise strategic plan approved by the holding company Board that sets the course for the enterprise for a five-year period.
- b. Annual business plans that are approved at both the holding company and regulated distribution utility levels, which are comprised of a corporate performance scorecard and budget. These elements operationalize the strategic plan in a given year and cascade to employees through individual contribution and performance appraisal systems. The annual business plans are informed by, and draw upon, updated plans for each administrative division within the utility which are prepared by the applicable member of the Executive Management Team.
- c. Regular monitoring and reporting of performance and progress against annual plans and budget, including:
 - i. Monthly reviews by the Executive Management Team of financials, status of priorities and critical projects, and performance measures and targets as established for each key area of focus in the annual Corporate Performance Scorecard;
 - ii. Monthly updates to the Shareholder;
 - iii. A quarterly President and CEO Report to the holding company and regulated distribution utility Boards of progress against the Corporate Performance Scorecard, including enterprise risk management reporting;
 - iv. Quarterly financial reports to the Shareholder;
 - v. Review by the holding company and regulated distribution utility Boards of annual results against the Corporate Performance Scorecard and financial results in April; and

- vi. An annual report to the Shareholder in June.
- d. As part of the development of the annual plan for the next year, an annual review of the critical issues and opportunities facing the utility by the Executive Management Team, and subsequently by the Board of Directors, to determine whether an adjustment to the five-year plan is required.

In addition, a key input into the process is a set of formal guidelines from the Chief Financial Officer for the preparation of five-year budgets for Hydro Ottawa's subsequent distribution rate period. This guidance is circulated approximately one year in advance of the expected filing date of the rate application. The document lays out a timeline for budget development; identifies constraints and expectations relevant to such matters as compensation, headcount, and capital and operational expenditure levels; and stipulates requirements related to productivity, continuous improvement, cost control, and alignment of spending to the utility's priorities.

A copy of the memorandum setting forth guidelines for 2020-2025 budgets and priorities is included as an attachment below.

4. CUSTOMER NEEDS & PREFERENCES

Providing customers with value for money and facilitating a customer experience that is driven by choice are cornerstones of Hydro Ottawa's business planning. In step with its overall business strategy to put the customer at the centre of everything it does, the utility endeavours to ensure that its capital and operational investment plans are guided and informed by customer needs, preferences, and priorities.

4.1. ONGOING CUSTOMER ENGAGEMENT

Hydro Ottawa avails itself of numerous tools, activities, and interactions to engage customers and to reflect their input in the utility's planning and plans on an ongoing basis. These reflect an evergreen posture on Hydro Ottawa's part to develop a genuine understanding of customers'

HydroOttawa

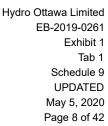

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 7 of 42

interests through a fluid and continuous feedback loop. This helps inform and sharpen the utility's service delivery as a matter of established routine, and embed a customer-centric culture across the organization.

Hydro Ottawa's approach to customer engagement represents a blend of activities that are either aligned with industry best practice or are homegrown, having been formulated and customized internally in order to suit the particular needs of the utility and its customer base. Key channels for interaction include telephone, email, web chat, social media, website, in person, and community events. Focus groups, surveys, and analytics are also important research tools for gleaning broader insights and trends.

The following serve as illustrative – but by no means comprehensive – examples of specific instruments used by Hydro Ottawa to identify customer needs and preferences, and to incorporate them into the utility's plans for providing electricity distribution services:

- Social media platforms Hydro Ottawa uses social media channels to engage in two-way conversations with customers on a daily basis. Channels are monitored during business hours and, in particular, during prolonged power outages in order to answer customer questions or concerns. Recent trends indicate that many customers have a strong preference to use social media to share information or ask questions related to outages, and that they value real-time responses to their inquiries.
- Transactional surveys every week, customers who phoned Hydro Ottawa's call
 centre during the previous week are automatically invited to rate their experience with
 the service received. Based upon the survey results, Hydro Ottawa is able to enhance
 the customer experience and adapt processes in a timely and responsive manner. More
 recently, Hydro Ottawa added email and web chat features to this survey, in keeping with
 the utility's commitment to engage customers through the channel of their choice.

- Annual customer satisfaction survey survey questions cover a wide variety of topics, including overall satisfaction with Hydro Ottawa, reliability, customer service, power outages, billing, cost of electricity, and corporate image. Feedback from these surveys is incorporated into Hydro Ottawa's planning process, and ultimately forms the basis of plans which address customer needs as well as service improvements and offerings.
- Key Accounts program customers are categorized as a Key Account based on their size of service, financial impact, and impact on the community and the grid. Hydro Ottawa works proactively with these large business and institutional customers on a range of priorities, including billing, load profile, rates analysis, power quality, energy management, and education and awareness of provincial regulations.
- Project-specific open houses these are hosted by Hydro Ottawa when major distribution system projects have the potential to impact customers and their community.
 Based on customer feedback, these consultations have resulted in the evaluation of additional design options, the use of less impactful equipment, and/or the scheduling of mutually agreeable timelines for project completion. Between 2016 and 2019, Hydro Ottawa held 35 such open houses.
- Collaboration with contractors and developers this takes the form of routine information sharing and participation in dedicated associations and forums with members of this unique stakeholder group. These engagements offer valuable insights into customer expectations around Hydro Ottawa's communications, processes, standards, specifications, costing, and Conditions of Service.
- Conditions of Service revisions Hydro Ottawa compiles suggested edits to its Conditions of Service ("COS") on an ongoing basis, in response to customer feedback.
 Prior to the filing of any revised COS, Hydro Ottawa solicits customer comments through

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 9 of 42

its website and social media accounts. All customers likewise receive notification of the review period through an on-bill message. In addition, contractors, City of Ottawa contacts, and Key Accounts are directly notified of the review period by letter.

• Engagement with the City of Ottawa – given the impact of municipal planning, services, and regulations on customer needs, the relationship with the City is a vital one. Accordingly, Hydro Ottawa frequently interacts with numerous divisions across the municipal government. These interactions serve as platforms for discussing critical matters, such as long-term planning, capital programs, permitting, standards, and servicing. In turn, they play a valuable role in enhancing communications and coordination, sharing of lessons learned, identifying opportunities for improvement, and building mutual understanding.

4.2. CUSTOMER CONSULTATION ON THE 2021-2025 RATE APPLICATION

As a complement to, and extension of, the foregoing activities, Hydro Ottawa undertook targeted customer outreach activities to inform the development of the specific plans and proposals set forth in its 2021-2025 rate application. Consisting of a mix of qualitative and quantitative methodologies, this engagement was launched in January 2019 and extended through September 2019.

Phase I of this consultation focused on low-volume customers (residential and small business), seeing as these segments represent approximately 99% of the total customer base. This initial phase focused on gathering general insights on customer priorities, preferences, and needs.

Consistent findings were yielded across low-volume customer classes. To begin, the clear majority of these customers expressed satisfaction with the current service they receive from Hydro Ottawa. In addition, ensuring reliability, maintaining reasonable rates, and investing in technology in order to help reduce future costs constituted the top three priorities for customers. Moreover, these customers generally held favourable views on making proactive investments in

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 10 of 42

aging infrastructure and grid modernization at the present time, with the understanding that this may lead to near-term costs but will result in future savings. With respect to reliability outcomes, above all customers placed a premium on accelerating restoration times following extreme weather events. Minimizing the number and duration of outages in general was flagged as the next most pressing priority.

Based upon the feedback received during Phase I, Hydro Ottawa undertook a second, more expansive phase of engagement, in which the utility surveyed customers for their detailed feedback on proposed plans for capital and operational investments over the 2021-2025 period. A series of expenditure options was presented – namely, a reference case outlining the utility's proposed course of action, along with scenarios which either accelerated and expanded the proposal, or which scaled back the scope and timing of the proposal. Customers were thus able to express their views on a range of alternative proposals, as well as the respective trade-offs, outcomes, and rate impacts.

For residential and small business customer classes, the response was heavily weighted in support of Hydro Ottawa's proposed plans or spending more than proposed for certain services. Nearly one-half of respondents in both segments (48% and 47%, respectively) identified that Hydro Ottawa should maintain the forecasted annual increase to deliver a program which focuses on the stated priorities. A further 35% of residential and 29% of small business customers expressed support for further improvements in service, even if this entailed additional rate increases. What's more, a majority of respondents called for investments above and beyond the reference case for purposes of renewing the overhead and underground portions of the grid, while more than 75% of customers signalled a willingness to pay more on their monthly bill in order to enable Hydro Ottawa to undertake measures to prepare for the effects of severe weather.

With respect to participants from large customer segments, these voices expressed concern over the rate increases being proposed and were open to potential decreases in service

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 11 of 42

reliability if this equated to reductions in forecasted bill increases. This feedback was highly valuable, insofar as it emphasized the critical importance of a balanced plan – one which maximizes the impact of investments to match residential customer expectations without exacerbating rate pressures on business customers (and all while relentlessly pursuing efficiency and productivity improvements).

Of note, the number of customers who participated in this engagement exercise – nearly 21,000 in total – was the largest in the history of any Hydro Ottawa rate application. In itself, this result was encouraging and instilled confidence in the quality of the information gleaned and the representativeness of the sample pool of customers. Beyond this, however, Hydro Ottawa was buoyed by the fact that the rate of response (i.e. number of respondents as a percentage of the total customer base) exceeded that which has been observed in any rate filing from an OEB-regulated distributor in recent memory.

5. STRATEGIC CONTEXT

Hydro Ottawa has formulated its corporate vision and objectives against the backdrop of numerous trends and shifts that are unfolding in the operational, business, and policy environments in which the utility carries out its activity.

5.1. OPERATIONAL CHALLENGES

5.1.1. Aging Infrastructure

Foremost among the operational pressures facing the utility is the advanced age of a significant subset of its asset base. Large segments of the system were constructed in the 1960s through the 1980s. With most assets having a lifespan of approximately 50 years, a considerable proportion of the system is approaching or has exceeded the anticipated end of life.

For example, nearly 19% of all assets have reached their expected service life and now pose a higher risk of failure. This includes approximately 51% of stations and 23% of overhead system

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 12 of 42

assets (i.e. poles, transformers, and switches). Another 12% of the asset population is within 10 years of reaching its end of life.

In the absence of critical system renewal investments, the increased potential of failures posed by these aging assets will impact Hydro Ottawa's ability to maintain grid reliability.

5.1.2. An Expanding Customer Base

Compounding the challenge of replacing aging infrastructure is the sustained growth which the City of Ottawa continues to experience. This trend has translated into a steady expansion in the number of customers served by the utility and the number of new customers requiring connection to Hydro Ottawa's network on an annual basis.

Similar to the patterns observed throughout 2016 to 2020, Hydro Ottawa anticipates a comparable level of growth over the course of the planned 2021-2025 rate term. In fact, the City of Ottawa is projecting an increase of over 16% in the city's population by 2031, relative to 2016 levels. This growth is expected to take several distinct forms: the development of new mixed commercial/residential communities; intensification of development within the urban core of the service territory; continued suburban growth in the east, west, and southern regions; and former rural areas fed by long distribution lines becoming suburban centres. Alongside this development, major infrastructure projects such as the Stage 2 expansion of Ottawa's Light Rail Transit system are also set to overlap with the utility's upcoming rate period.

5.1.3. Extreme Weather Effects

In a 2019 report examining Canada's top climate change risks, the Council of Canadian Academies found that "climate change is very likely to cause significant negative impacts across many natural and human systems in Canada over the next 20 years." The report concluded that adaptation action will need to be pursued through effective partnerships among government, the private sector, communities, and individuals, in order to avoid the worst damages stemming from climate change.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 13 of 42

Over the last five years, Hydro Ottawa and its customers experienced firsthand the growing frequency of severe weather events and their adverse impacts on the distribution grid. During a six-month span in 2018 alone, there were three major weather events that affected the Ottawa area (including a multiple-tornado event during the month of September) which caused considerable damage and heavily impacted spending on emergency replacement of assets. This series of events was bookended on either side by historic flooding along the Ottawa River in 2017 and 2019, which resulted in tens of millions of dollars in economic losses and prolonged disruptions to customers in affected areas.

In light of these findings and events, and in view of the rising trend of extreme weather, Hydro Ottawa will be compelled to enhance adaptation and risk mitigation measures within the design, operation, and maintenance of its system, in order to help protect infrastructure, service delivery, and occupational health and safety. To that end, the utility has already commissioned and received a formal distribution system climate risk and vulnerability assessment, and is undertaking a multi-year action plan to implement the recommendations.

5.1.4. Technological Complexity

The operational and informational technology systems that underpin utilities' performance are rapidly evolving and becoming increasingly complex. The business systems and processes supporting frontline operations and back-office functions are steadily migrating towards digital, mobile-friendly, and cloud-based solutions. Core operational systems continue their convergence with enterprise information systems. Automation is on the rise, with the frontier into artificial intelligence likewise being crossed. And while utilities are navigating this shifting terrain, they are simultaneously compelled to mitigate the risk of technologies becoming obsolete – whether as a result of third-party providers discontinuing maintenance services for legacy solutions or existing tools having reached the end of their useful lives (as in the case of first-generation smart meters).

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 14 of 42

Meanwhile, the implementation of smart grid equipment and devices, alongside the proliferation of distributed energy resources ("DERs"), has fostered a more dynamic ecosystem of transactions, participants, and flows of energy, information, and communications. What's more, a central tenet of the "Smart City" movement is that utilities will enable the connectivity which harnesses the power of data and technology to enhance the quality of life for communities.

Taken together, the aforementioned technological trends and pressures introduce a wide spectrum of both risk and opportunity for Hydro Ottawa.

5.1.5. Cyber Security

The critical nature of the services provided by utilities makes for a double-edged sword. On the one hand, there is widespread recognition of the indispensable role played by electricity distributors in the quality of life that is enjoyed by consumers. Conversely, the essential role played by electricity means that utilities rank among the most high-value targets for malicious actors in cyberspace. This risk is magnified for a distributor like Hydro Ottawa, which serves the capital city of a G7 country and a multitude of customers with unique service quality and data confidentiality needs.

The risks faced by utilities in Ontario in relation to cyber security are set to amplify exponentially over the coming five-year horizon and beyond, in light of the rising complexity of operational and informational technology systems noted in the foregoing section. Further reflection of the shifting risk landscape is the OEB's recent implementation of a cyber security framework for utilities under its jurisdiction, as well as the expansion of the Independent Electricity System Operator's ("IESO") mandate to provide cyber security information services to licensed transmitters and distributors.

5.1.6. Workforce Retirements

Hydro Ottawa has long maintained that its strength and success as a company is derived from the quality of its employees. Like many companies in the electricity sector, though, Hydro

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 15 of 42

Ottawa faces challenging workforce demographics. For example, over the next 10 years, 34% of the workforce will be eligible for retirement, of which 60% are skilled workers in trades or technical professions. Taken together with the fact that almost one-third of employees have five years or less of service, the picture of the workforce population at Hydro Ottawa is one in which there is less experience in a highly complex and safety-focused operating environment. The ability of the utility to proactively prepare for the impacts of workforce demographics, as well as the impacts of technological and digital transformation on requisite employee skill sets, will be a critical determinant of whether core business objectives and customer needs can be met.

5.2. BUSINESS ENVIRONMENT

5.2.1. State of the Economy

The state of the local, provincial, national, and international economies can have a significant impact on Hydro Ottawa's business through factors such as inflation, customer credit risk, weakening demand for electricity and/or value-added services, and availability of market capital to fund growth. The economic climate can also have an effect on the stability and performance of some of the utility's key business partners. While near- and mid-term indicators in Ottawa, Ontario, and Canada are generally positive, the prospect of economic headwinds and uncertainty lingers, especially in relation to competitiveness and regulatory and tax burdens.

5.2.2. Evolution of the Utility Business Model

It is widely acknowledged across industry, academic, and government circles that the sector is in the midst of a historic transition. In some corners, this transformation is attributed to the confluence of key factors known as the "three Ds" – decentralization, decarbonisation, and digitization. Innovative tools, technologies, and data sets are introducing new options to enhance customers' control, understanding, and supply of energy. In turn, this is cultivating higher customer expectations for leading-edge services and solutions. Moreover, the economics of supply options have evolved significantly. Maturing forms of non-emitting resources are approaching cost parity with conventional generation resources, while the appeal of DERs has also grown.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 16 of 42

Against this backdrop of change, the prevailing consensus favours the view that the utility has no choice but to abandon its conventional business model. What ought to replace it, however, remains a subject of contentious debate. It is a question that every utility will be compelled to address and resolve in short order. If an effective and viable response is not forthcoming, the risk emerges of actors and forces beyond the utility's control making the decision instead.

5.2.3. Customer Interest in Choice & Sustainability

As signalled in the foregoing section, the engine that is fueling the transformation unfolding in the sector is the changing role of the customer. Whereas this role has historically been passive in nature, it has become much more influential in the new landscape. The opportunities and expectations for customized service, control, and convenience continue to expand. A prominent example in this regard is the rising level of customer interest in sourcing power from clean sources of energy and the manifestation of this appetite in the steady proliferation of DERs across Ontario.

The shifting sands of customers' needs and choices present an exciting opportunity for offering new products and services to enhance customer value and service. To realize these opportunities, utilities will need to continuously improve the way they do business, with a particular focus on creating a more effortless and engaging customer experience. As the preferences and priorities of customers continue to evolve, Hydro Ottawa must be ready, willing, and able to fulfill them. Maintaining a business strategy that puts the customer at the centre of everything the utility does will be a fundamental prerequisite for success.

5.2.4. Consolidation & Shared Services in the Distribution Sector

The business environment of Ontario's electricity distribution sector is unique, in terms of the number of participating members. Over 60 local distributors provide electricity to the province's 5.2 million customers. For many years, public policy has sought to encourage and incentivize consolidation within the distribution community. What's more, numerous aspects of the sector's evolution and the changing utility business model seem to favour economies of scale in a distributor's operations and activities. It is therefore not altogether surprising that, since the

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 17 of 42

filing of Hydro Ottawa's last rebasing application in 2015, the sector has witnessed a steady succession of consolidations, along with an uptick in the entry into shared services agreements.

The footprint and dispersion of distribution utilities throughout Eastern Ontario means that Hydro Ottawa remains well-positioned to pursue consolidation opportunities. Similarly, the utility's range of experience with shared services has underscored the value of targeted collaboration and partnership with utility peers, where appropriate. As such, going forward, these options will remain important parts of the utility's toolkit to provide the most cost-effective solutions to customers.

5.2.5. Market Renewal

Hydro Ottawa is a registered participant in the provincial electricity market administered by the IESO. In its capacity as a market participant, the company purchases electricity from the IESO on behalf of the vast majority of its customers. Accordingly, Hydro Ottawa has a direct stake in an efficient and reliable market, which is able to supply customers with power at the lowest possible cost. Since 2016, the IESO has been exploring a series of enhancements to the design and administration of Ontario's markets. Several of these proposals contemplate fundamental changes to the structures and methodologies for determining the wholesale price of electricity. Under the IESO's project management timeline for Market Renewal, the initial group of these proposals is slated to take effect in March 2023, near the mid-point of Hydro Ottawa's next five-year rate term.

For electricity distributors, the reforms emanating from Market Renewal may represent a double-edged sword. On the one hand, they may pose certain administrative challenges, especially from a settlements and billing perspective. Concurrently, however, to the extent that Market Renewal serves as a platform for developing new product and service offerings, the initiative could also open the door to new business and revenue opportunities.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 18 of 42

5.3. POLICY & REGULATORY ENVIRONMENT

5.3.1. Shifts in Public Policy & Regulation

Over the course of Hydro Ottawa's 2016-2020 rate period, there were numerous policy and regulatory developments which had profound effects on the utility and the sector at large: establishment and subsequent cancellation of a provincial cap-and-trade program; implementation of numerous electricity rate mitigation and assistance programs; changes to the OEB's customer service rules, including the institution of a moratorium on residential disconnections during winter; adoption of the Ontario Cyber Security Framework; issuance of OEB guidance on corporate governance; cancellation of Ontario's conservation framework; and reforms to the OEB's governance structure.

And with respect to the primary vehicle driving provincial energy policy of late – the Long-Term Energy Plan ("LTEP") – it warrants observation that a total of three LTEPs have been issued over the past seven years. Each iteration of the LTEP left a lasting imprint on the public policy landscape. Assuming the current legislative framework for LTEP development remains in place, two new LTEPs are set to be released over the course of Hydro Ottawa's 2021-2025 rate term.

A practical effect of these recent trends has been a heightened need for electricity distributors to respond quickly to policy and regulatory actions which significantly impact the operations, activities, investments, and structure of the distribution sector. Hydro Ottawa anticipates that this need for readiness and nimbleness in adapting to shifts in public policy direction will endure throughout the utility's forthcoming rate period.

5.3.2. Affordability & Cost Reduction

While in recent years the broader policy landscape has been fluid, one aspect has remained firm – an enduring interest on the part of policymakers and regulators in placing downward pressure on customers' rates and bills. This objective has been pursued in varying forms, whether through rate rebates and mitigation, assistance for customers struggling to pay their bills, dedicated programs for commercial and industrial ratepayers, subsidies for the purchase of

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 19 of 42

energy efficient equipment, or pilot programs to test alternative pricing structures. Depending upon the future direction and constraints of public policy in this regard, rate-regulated utilities may face challenges, such as barriers or resistance to approval for cost recovery of operational and capital expenditures.

5.3.3. GHG Emissions Reduction & Electrification

Across all levels of government, there is a crystallizing consensus that greenhouse gas ("GHG") emissions ought to be lowered. Where sharp differences in policy prescriptions do exist is in regards to the means for achieving this end. And yet, even in this respect, there are common threads woven by policy actors that are of significant relevance to the electricity distribution sector in Ontario. Foremost among these is growing policy interest in the electrification of various economic sectors, especially transportation. This enthusiasm can be observed in a range of federal government climate change initiatives as well as in the province's projections for a steady uptick in the deployment of electric vehicles. Hydro Ottawa is also in the unique vantage point of having a shareholder, the City of Ottawa, which views electrification as a critical means of supporting its "Energy Evolution" strategy for reducing GHGs and boosting renewable energy use.

With the arc of GHG reduction policy bending in a direction that is increasingly favourable to enhanced electrification, both the implications and opportunities for distributors are numerous. In the former context, localized impacts on distribution infrastructure could be significant, depending upon the scale and pace of electrification. As for the latter, the embrace of electrification is advantageous to distributors, insofar as it bolsters their position to serve as a trusted energy advisor for customers and as an enabler of smart energy solutions.

5.3.4. Policy Action on Utility Revenue & Ratemaking

Looking ahead to the next five-year rate term for Hydro Ottawa, the outlook is decidedly mixed with respect to the revenue and ratemaking models for Ontario distributors. Grounds for optimism, in relation to the prospect of expanded business interests and opportunities, include

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 20 of 42

provisions of the *Ontario Energy Board Act, 1998* which have relaxed restrictions on permissible business activity for distributors, as well as signals from the regulator that it is open to reducing barriers to new utility business models and examining approaches to remuneration that incent cost-effective innovation. At the same time, however, any conversation around utility remuneration will feature some degree of risk that other actors may seek outcomes that are at odds with the goal of enlarging the playing field in which distributors can compete. What's more, the prospect lingers of policy action on electricity pricing and bill reduction that may have adverse consequences for distributors from a financial viability perspective.

6. STRATEGIC OBJECTIVES & CORPORATE PERFORMANCE GOALS

6.1. STRATEGIC OBJECTIVES

Hydro Ottawa's vision is to be a leading partner in a smart energy future and to serve as the trusted energy advisor for customers. To achieve this vision, the utility has organized its business strategy around four critical areas of performance and supporting strategic objectives for several years – as represented in the figure below.

Hydro Ottawa will maintain continuity in its core objectives heading into the 2021-2025 period. Consistent with past years, the renewed strategic objectives are being formally adopted at the holding company level and will cascade across the enterprise. They will therefore serve to guide the business and operations of the regulated distribution utility.

The rationale underlying this approach includes such key factors as the level of success achieved during the preceding five-year rate term, the trajectory of the business and policy landscape in which Hydro Ottawa operates (as described in the preceding section on Strategic Context), and the input received from customers regarding the utility's performance and direction.

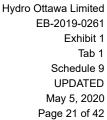

Figure 1 – Corporate Strategic Objectives

- **Customer Value:** we will deliver value across the entire customer experience by providing reliable, responsive and innovative services at competitive rates.
- Organizational Effectiveness: we will achieve performance excellence by cultivating a culture of innovation and continuous improvement.
- Financial Strength: we will create sustainable growth in our business and our earnings
 by improving productivity and pursuing business growth opportunities that leverage our
 strengths our core capabilities, our assets and our people.
- Corporate Citizenship: we will contribute to the well-being of the community by acting at all times as a responsible and engaged corporate citizen.

Of these objectives, the most important driver of Hydro Ottawa's business strategy will remain Customer Value, with the utility striving to put the customer at the centre of everything it does.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 22 of 42

6.2. CORPORATE PERFORMANCE GOALS

Customer Value, Financial Strength, Organizational Effectiveness, and Corporate Citizenship serve as the overarching four key areas of focus around which Hydro Ottawa anchors and organizes its business activity. With respect to the design and execution of plans to achieve strategic objectives in each of these areas of performance, a critical step is the establishment of a corporate performance scorecard. This scorecard establishes qualitative performance goals and priorities, along with quantitative measures and targets, in each of the four strategic areas of focus. Similar to the adoption of the strategic objectives, the corporate performance goals are established by the holding company, and in turn, are cascaded across the enterprise.

The table below depicts the planned alignment between the strategic objectives and corporate performance goals for Hydro Ottawa's regulated electricity distribution business for the 2021-2025 rate term.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 23 of 42

Table 1 – Alignment of Corporate Strategic Objectives & Corporate Performance Goals

5-Year E	nterprise Strategic Objectives and Outcomes (2021-2025)	Corporate Performance Goals
Customer Value	Enterprise Strategic Objective: We will deliver value across the entire customer experience By providing reliable, responsive and innovative services at competitive rates Enterprise Strategic Outcome: Customer loyalty	 Assist customers in managing their energy consumption and electricity costs Deliver on customer expectations for service quality and responsiveness Maintain overall distribution system reliability
Organizational Effectiveness	Enterprise Strategic Objective: We will achieve performance excellence By cultivating a culture of innovation and continuous improvement Enterprise Strategic Outcomes: Efficient and effective operations Safe and healthy work environment Engaged, aligned and prepared workforce	 Continue to enhance operational performance and productivity Maintain leading health and safety record Enhance organizational and employee capability
Financial Strength	Enterprise Strategic Objective: We will create sustainable growth in our business and our earnings By improving productivity and pursuing business growth opportunities that leverage our strengths – our core capabilities, our assets and our people Enterprise Strategic Outcome: Growth in shareholder value	Grow revenues from new sources Enhance / protect revenues from existing business lines
Corporate Citizenship	Enterprise Strategic Objective: We will contribute to the well-being of the community By acting at all times as a responsible and engaged corporate citizen Enterprise Strategic Outcomes: Leading governance and business practices Engaged stakeholders Safe, secure and environmentally responsible services Positive community impact	 Enhance our brand image in the community and the industry Continue to improve our environmental performance and reduce our impact on the environment

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 24 of 42

7. CAPITAL & OPERATIONAL PLANS

This business strategy's centre of gravity is the set of plans which will organize and govern Hydro Ottawa's proposed investments in capital and operational programs over the 2021-2025 period.

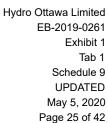

Capital expenditures relate to items that, once purchased, have lasting benefits over many years. These include the overhead and underground infrastructure (stations, poles, wires) that serve as the backbone of the distribution system, as well as supporting assets and equipment, such as facilities, vehicles, and computer systems. Operating expenditures pertain to recurring expenses that are incurred in the day-to-day management of Hydro Ottawa's activities, like maintenance of assets and equipment, tree trimming, customer billing, workforce training, and employee payroll.

Based upon customer feedback, Hydro Ottawa has crafted capital and operational plans that emphasize the following four core principles:

- 1. Minimize rate increases
- 2. Maintain reliability and service quality
- 3. Address key pressures to the system, including:
 - Aging infrastructure
 - An expanding customer base and continued population growth
 - The effects of severe weather events
- 4. Make prudent investments in emerging technologies to enhance service offerings and/or reduce operation costs.

7.1. CAPITAL PLAN

Hydro Ottawa's assessments of its capital needs, and its proposed expenditures for meeting them, are captured in the utility's Distribution System Plan ("DSP"). The DSP details how capital investments will be prioritized, paced, and optimized, while minimizing rate impacts for

customers and facilitating continuous improvement and productivity. The DSP is a core deliverable emerging from multiple internal and external planning processes related to capital investment, asset management, regional planning, customer engagement, and business strategy.

The investment proposals set forth in the DSP are organized into four categories – System Access, System Renewal, System Service, and General Plant. Projected expenditures, as well as the breakdown of programs, within each of these categories are outlined in the table below.

Table 2 – AS ORIGINALLY SUBMITTED – Annual Capital Investments (\$'000,000s)

Investment Category	2021	2022	2023	2024	2025
System Access	\$56.7	\$41.0	\$37.4	\$34.5	\$34.0
System Renewal	\$43.3	\$44.0	\$40.2	\$39.4	\$40.5
System Service	\$31.0	\$27.4	\$24.3	\$25.2	\$23.9
General Plant	\$32.0	\$11.7	\$7.6	\$17.4	\$16.9
Capital Contributions	\$(41.3)	\$(25.2)	\$(19.9)	\$(19.2)	\$(19.3)
TOTAL	\$121.8	\$98.9	\$89.6	\$97.2	\$96.0

Table 2 – UPDATED FOR 2019 ACTUALS – Annual Capital Investments (\$'000,000s)

Investment Category	2021	2022	2023	2024	2025
System Access	\$56.7	\$41.0	\$37.4	\$34.5	\$34.0
System Renewal	\$43.3	\$44.0	\$40.2	\$39.4	\$40.5
System Service	\$26.7	\$28.3	\$24.3	\$25.2	\$23.9
General Plant	\$32.0	\$11.7	\$7.6	\$17.4	\$16.9
Capital Contributions	\$(39.2)	\$(23.5)	\$(19.9)	\$(19.2)	\$(19.3)
TOTAL	\$119.5	\$101.5	\$89.6	\$97.2	\$96.0

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 26 of 42

7.1.1. System Access

This category encompasses those investments that allow Hydro Ottawa to meet its obligation to connect customers to the grid. These expenditures are subdivided into specific programs focused on connecting customers (e.g. new residential and commercial developments, and customer-driven electric generation projects), relocating equipment to accommodate municipal infrastructure needs like road widening, and installing meters.

System Access - Capital Programs

- Plant Relocation & Upgrade
- · Residential Subdivision
- · Commercial Development
- System Expansion
- Embedded Generation
- Infill Service (Residential & Small Commercial)
- Metering

Major projects expected in this investment category during 2021-2025 include residential and commercial connections consistent with recent historical expenditures, system expansion, plant relocation (especially in relation to Stage 2 of Light Rail Transit in the City of Ottawa), and retrofits of bulk metered buildings to unit metering.

With the City of Ottawa continuing to experience a steady level of growth, and with the utility having recently averaged upwards of 4,000-5,000 new connections every year, System Access expenditures remain crucial to achieving positive outcomes in relation to customer expectations for service quality and responsiveness. Likewise, they will be critical to the success of flagship local infrastructure projects over the 2021-2025 period. There is also a nexus between this category of investment and the environmental benefits that accrue to customers and the community from increased deployment of distributed renewable generation, including net metered projects.

7.1.2. System Renewal

Included under the scope of this category is the replacement and refurbishment of system assets, in order to extend their original service life or replace them on an emergency basis. Of

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 27 of 42

note, this activity touches the parts of Hydro Ottawa's grid that are either most visible (poles, wires, transformers, and stations) or least visible (underground cable and vaults) to the public. Together, these programs are aimed at alleviating one of the most significant pressures on the system –

System Renewal - Capital Programs

- Station Assets Renewal
- · Overhead Distribution Assets Renewal
- Underground Distribution Assets Renewal
- Corrective Renewal
- Damage to Plant

namely, mitigating the risk of the potential failure of end-of-life assets and equipment. The primacy of System Renewal is underscored by the fact that this grouping represents the largest share of the broader capital funding envelope.

Planned projects of note under this investment category include renewal of distribution poles, transformers, and stations, emergency replacement of overhead assets following severe weather events, rehabilitation of underground chamber assets, replacement of underground cable, and upgrades of various types of metering equipment that have reached end of life.

Key outcomes associated with System Renewal expenditures are improvements to overall system reliability, as well as reductions in the average duration and frequency of outages.

7.1.3. System Service

The purpose of these infrastructure upgrades and modifications is to enhance reliability and capacity on the grid, and ensure that the system continues to meet operational objectives while addressing future customer needs. Similar to the foregoing categories, System Service is comprised of its

System Service - Capital Programs

- Capacity Upgrades
- Distribution Enhancements
- Station Enhancements
- Grid Technologies
- Metering

own unique set of programs. Expenditures revolve around capacity upgrades that are intended to relieve constraints caused by load growth; system and station enhancements that improve operating characteristics, add redundancy, and strengthen the resilience against severe weather

Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 1
Schedule 9
UPDATED
May 5, 2020
Page 28 of 42

events; and deployment of grid technologies that augment the technological and communication capabilities of the system.

Major station projects in this category will be the development of new stations in the south Nepean and east Leitrim regions of the City of Ottawa, which are needed to accommodate customer load growth and to increase supply capacity in growing suburbs that have already reached the limits of local transformation capacity. Other major projects include upgrades to the functionality of Hydro Ottawa's Supervisory Control and Data Acquisition ("SCADA") system, enhancements to the Outage Management System, the installation of field area network infrastructure to enable greater automation in communications, roll-out of the next phase of the utility's MiGen smart energy project, deployment of cyber security and monitoring equipment at stations, and upgrades to customer meters to enable remote disconnections.

Maintaining current levels of reliability, while targeting those pockets of the system in which reliability performance is below average, are principal objectives driving this basket of investments.

7.1.4. General Plant

Whereas the three system-related categories discussed above relate to investments in the core components of Hydro Ottawa's distribution grid, General Plant covers expenditures on assets that are not part of the system. These include facilities, land, fleet, tools, equipment, information technology hardware and software, and other rolling stock that is used to support essential business activities.

General Plant - Capital Programs

- Buildings Facilities
- Customer Service
- Enterprise Resource Planning System
- Fleet Replacement
- ■ New Initiatives
- II Life Cycle & Enhancements
- Operation Initiatives
- Tools Replacement
- Facilities Implementation

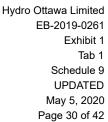

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 29 of 42

Successful completion of General Plant projects is a key determinant of the efficiency and effectiveness of the utility's overall business performance. In many instances, the ability to follow through on commitments to customers and to safeguard employee health and safety hinges upon program expenditures in this category.

Key projects planned in this investment category for 2021-2025 include deployment of a digital Customer Relationship Management system enabling a 360-degree view of customer activity, migration of the enterprise resource planning system to a cloud-based platform, adoption of enhanced equipment and software to support crews in the field, replacement of critical IT infrastructure, implementation of cyber security safeguards, and upgrades to the numerous business systems responsible for collecting, processing, and validating incoming meter data.

Similarly, several of these investments will have multi-faceted value streams, insofar as they will enable Hydro Ottawa to achieve multiple performance outcomes at the same time. For example, enhancements to the Customer Care & Billing ("CC&B") system will better position Hydro Ottawa to assist customers in managing their energy needs, offer a more personalized experience, and ensure satisfaction with the utility's services. Beyond this, however, upgraded CC&B functionality will also introduce new options to customers for obtaining value-added products or services (e.g. direct deposit of credits into customers' bank accounts, and a wider range of options for payment methods and bill due dates), while simultaneously opening doors to opportunities for shared services with other utilities and services to third parties. The availability of this solution will expand customer choice and convenience as well as carve out space for growing revenue from new sources.

Finally, certain projects in this portfolio are set to serve as unique illustrations of the best-in-class innovation culture which Hydro Ottawa continuously seeks to foster. Examples include the deployment of artificial intelligence solutions in order to automate a number of business processes and enhance their efficiency and accuracy.

7.2. OPERATIONAL PLAN

Hydro Ottawa's responsibility to manage a safe and reliable distribution system, serve customers in a manner that is responsive to their needs and preferences, and maintain compliance with a broad range of legislative and regulatory requirements compel the utility to incur a level of costs that is proportionate to the magnitude of its operational obligations. These costs are spread across 14 different operations, maintenance and administration ("OM&A") program categories that serve to structure the myriad of activities which are part and parcel of keeping the lights on. Annual OM&A expenditures for the 2021-2025 rate term are outlined in the table below.

Table 3 – Annual OM&A Program Expenditures (\$'000,000s)

2021	2022	2023	2024	2025
\$93.9	\$96.3	\$98.7	\$101.2	\$103.7

The principal cost drivers underlying Hydro Ottawa's forecasted OM&A expenses include costs associated with legislative and regulatory compliance; operational investments needed for safety and reliability; employee compensation and training; ongoing support, maintenance, licensing, and protection of the company's IT systems; fuel; market priced contracts; and inflation.

Of note, during the internal budgeting process, the initial levels of OM&A submitted by the various divisions within the utility resulted in an overall OM&A Compound Annual Growth Rate ("CAGR") of 3.5% over the 2021-2025 period. In step with its commitment to continuous improvement and customer preferences for minimizing rate increases, Hydro Ottawa then applied a custom OM&A escalation factor to contain upward pressure on operational expenses and to embed productivity expectations throughout the 2021-2025 period. This lowered the overall OM&A CAGR to 2.51% and achieved a reduction of \$13.1 million in OM&A spending over the course of the rate term.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 31 of 42

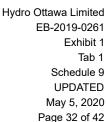

Moreover, Hydro Ottawa staff levels will not increase between 2021 and 2025, relative to staffing levels from 2019. Similarly, heading into this next Custom IR period, Hydro Ottawa is set to serve a larger number of customers than at the outset of its previous five-year rate plan (~323,000 as of the end of 2015 vs. ~340,000 as of the end of 2019 – an increase of over 5%). Both of these data points attest to the effectiveness of the utility's ongoing productivity and efficiency initiatives.

Hydro Ottawa's total operating costs are reported every year to the OEB and benchmarked against other distribution companies in Ontario. In the last year of publicly available data collected by the OEB, Hydro Ottawa's total operating cost per customer was \$260. Consistent with the pattern of recent years, this result compared favourably to the average cost per customer across all electricity distributors in the province (\$316).

7.3. INCORPORATING CUSTOMER FEEDBACK & PREFERENCES

Hydro Ottawa has designed its capital and operational plans to reflect the needs and priorities of customers, in both general and specific ways. Examples of how the utility has sought to incorporate the insights gleaned from extensive engagement with customers include the following:

- Certain proposals for capital spending have been deferred, as part of an asset needs
 rationalization process which was undertaken in order to prioritize the most critical
 projects for system reliability and maintenance and to identify opportunities for
 minimizing rate impacts.
- To further support efforts to defer capital spending and lower costs for customers, the use of non-wire alternatives is planned. In the Kanata North area, for example, a mix of conservation, load transfers, and voltage reductions solutions will be deployed to enable the deferral of a transmission-connected substation that had originally been identified as a need through the latest regional planning cycle.

- Critical investments in reliability-related projects are being paced in accordance with customer expectations for an appropriate level of service. One illustration in this regard is the prioritization of the construction of the new Cambrian Municipal Transformer Station in the early years of the rate period. This reflects the imperative to ensure sufficient capacity is available in an area which is forecasted to continue experiencing significant load growth over the next decade.
- A selective portfolio of prudent investments is planned in new technologies and solutions
 that will enhance the menu of service offerings available to customers and, in many
 cases, lead to reduced operational costs. These will open up new channels for
 customers to engage and transact with Hydro Ottawa, and continue the utility's
 movement to digital and cloud-based platforms which help eliminate the need for costly,
 on-premise IT infrastructure.
- Several steps are being taken to more formally incorporate climate change risk
 management into system planning processes and decision-making practices. The range
 of actions will include augmenting vegetation management practices, developing new
 anti-cascade standards for utility poles, and investing in greater automation capability for
 remote isolation and restoration of faulted system components.

Alongside the aforementioned examples, the ongoing implementation of productivity and efficiency initiatives will play a crucial role in minimizing operating costs. Specific examples of productivity are discussed in the ensuing section.

8. PRODUCTIVITY AND CONTINUOUS IMPROVEMENT

Responsibly controlling costs and focusing on cost-effective delivery of outcomes that matter to customers remain core priorities for Hydro Ottawa. Amidst the unique confluence of demands, pressures, and constraints on operations, the utility is placing increased emphasis on incorporating productivity and continuous improvement gains, so as to offset increasing expenditures and boost organizational capacity. Hydro Ottawa is therefore committed to

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 33 of 42

ensuring that productivity and continuous improvement serve as hallmarks of its 2021-2025 rate plan.

8.1. 2016-2020 INITIATIVES

A retrospective glance at the outcomes and efficiencies derived from productivity initiatives during the preceding five-year rate period demonstrates that there is a firm foundation upon which to build. During the 2016-2020 period, Hydro Ottawa successfully executed a wide spectrum of initiatives which resulted in tangible savings to customers – and at no expense to service quality or system reliability. Headlining this deep pool of initiatives were the following:

- Enhancements to the customer contact centre, giving customers an improved experience through access to more efficient service and a broad range of options for communicating with Hydro Ottawa through the channel of their choice;
- Introduction of new digital tools, such as a mobile application and Smart Speaker skills
 (a first in the Canadian electric utility sector), to take customer service to the next level of
 convenience and sophistication;
- Movement away from manual, paper-based processes and adoption of electronic solutions to support core business systems and practices, including the enterprise resource planning platform, field crew scheduling, fleet management, and planned outage communications;
- Consolidation and modernization of administrative and operational facilities; and
- Workforce stabilization and optimization, through such measures as reallocation of vacant positions to trades hiring and reduction of both on-call and overtime costs.

8.2. 2021-2025 INITIATIVES

Whether through harnessing the potential of new technologies and solutions to better serve customers, elevating standards of business performance and excellence, or rationalizing and re-purposing resources, Hydro Ottawa is set to continue strengthening its culture of continuous improvement over the course of its next five-year rate term.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 1
Schedule 9
UPDATED
May 5, 2020
Page 34 of 42

In accordance with internal guidelines for the preparation of plans and budgets for the 2021-2025 period, each administrative division within the utility was mandated to demonstrate productivity savings in a quantitative and/or qualitative fashion, and to identify initiatives dedicated to continuous improvement. This provides assurance that productivity and cost control objectives are firmly integrated into the business planning process.

A survey of the productivity initiatives planned over the next rate plan horizon reveals the following highlights:

- Movement of enterprise resource planning system to a cloud-based solution, thereby enabling greater administrative efficiency, reduced system maintenance costs, and timely access to new functionality;
- Integration of the recent SCADA system upgrade with the existing Outage Management System and a new Distribution Management System, enabling superior functionality and automation, and providing control room operators with line of sight and situational awareness through a single interface;
- Deployment of a digital platform for Customer Relationship Management, enabling a 360-degree view of customer activity across the utility;
- Increased deployment and further innovation in voice-activated digital assistance technology, for use in customer service and experience applications;
- Implementation of robotic process automation capabilities across multiple business units and programs, in order to more efficiently and expeditiously execute highly transactional activities;
- Renegotiation of contracts with external service providers for underground cable locates and vegetation management;
- Replacement of outdated phone lines for advanced metering infrastructure systems with modernized data collection nodes, which offer more extensive communications reach and enhanced resiliency against power interruptions;

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 35 of 42

- Deployment of a cloud-based platform to optimize the use and value of advanced metering infrastructure data analytics, as a means of driving operational efficiencies across a wide range of core business functions;
- Increase in the number of Alternate Locate Agreements;
- Enhanced productivity and reduced overtime costs for crews, on account of the implementation of seasonal construction schedules which aim to shift work away from the winter season, during which construction is more costly and inefficient due to environmental and operational constraints;
- Rationalizing and right-sizing of the utility's vehicle fleet through analytics of vehicle utilization;
- Achievement of 4% increase in daily available wrench time for crews; and
- Administration of internal programs dedicated to optimizing the lifecycle management and enhancement of IT assets.

8.3. BENCHMARKING

The preparation of this Business Plan was supported by year-over-year comparisons of Hydro Ottawa's costs and outcomes, along with evaluations of the utility's performance against its peers. Tracking and analysis of trends in the achievement of system reliability, customer value, and financial strength outcomes have informed the scope and substance of particular capital and OM&A programs. Similarly, the benchmarking of Hydro Ottawa's expenditures and performance relative to samples of utilities across Ontario, Canada, and the United States has yielded valuable insights into areas in which the utility performs well and those in which there is room for improvement. These findings have been internalized and incorporated into specific work programs, and will serve as important baselines and points of reference against which to measure the utility's progress.

As the implementation of Hydro Ottawa's capital and operational plans unfolds over the 2021-2025 period, the use of internal and external benchmarking will remain a vital tool for monitoring and measuring performance. The utility fully anticipates undertaking additional

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 36 of 42

benchmarking analysis during the rate term, as a means of supporting its broader performance management and business planning framework, as well as its system and asset management planning processes.

9. ALIGNMENT WITH THE RENEWED REGULATORY FRAMEWORK

The primary objectives animating Hydro Ottawa's corporate vision are wholly consistent with the main performance outcomes promoted under the OEB's Renewed Regulatory Framework ("RRF"). Hydro Ottawa views this broad alignment as a competitive advantage and remains committed to firmly entrenching RRF principles and objectives throughout its operations and business.

Table 4 below illustrates the alignment between the utility's overarching objectives and the key categories of performance outcomes under the RRF. For additional context, the table also shows the congruence of Hydro Ottawa's high-level performance goals and strategic outcomes – which are utilized to measure progress in achieving the strategic objectives – with the RRF's areas of focus.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 1
Schedule 9
UPDATED
May 5, 2020
Page 37 of 42

Table 4 – Alignment of Corporate Strategic Objectives with RRF Performance Outcomes

OEB RRF Performance Outcomes	Key Area of Focus	Corporate Performance Goal	Strategic Outcome
Customer Focus	Customer Value	 Assist customers in managing their energy consumption and electricity costs Deliver on customer expectations for service quality and responsiveness Maintain overall distribution system reliability 	Customer loyalty and satisfaction
Operational Effectiveness	Organizational Effectiveness	 Continue to enhance operational performance and productivity Maintain leading health and safety record Enhance organizational and employee capability 	 Efficient and effective operations Safe and healthy work environment Engaged, aligned and prepared workforce
Public Policy Responsiveness	Corporate Citizenship	 Enhance our brand image in the community and the industry Continue to improve our environmental performance and reduce our impact on the environment 	 Leading governance and business practices Engaged stakeholders Safe, secure and environmentally responsible services Positive community impact
Financial Performance	Financial Strength	 Grow revenues from new sources Enhance / protect revenues from existing business lines 	Growth in shareholder value

9.1. PERFORMANCE MEASUREMENTS

In accordance with the RRF's emphasis on achieving outcomes that provide value to customers, Hydro Ottawa is committing to a robust performance measurement and reporting framework for the upcoming five-year rate period. This framework expands and builds upon the success of the one that was in place for 2016-2020, and will maintain the approach of combining standard OEB performance measures with others that are customized for Hydro Ottawa's unique use.

As displayed in the table below, an integral component of this framework is the set of measures that will form the basis of Hydro Ottawa's 2021-2025 Custom Performance Scorecard. These

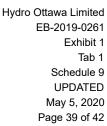

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 38 of 42

measures have been selected based upon a variety of factors and drivers, including responsiveness to customer preferences, alignment with core RRF and corporate strategic objectives, and correlation to key findings from the benchmarking analyses performed in support of this Business Plan.

Table 5 – Custom Performance Scorecard Measures

Outcome	OEB Reporting Category	Hydro Ottawa Custom Measures	New/Existing	Target
		Contact Centre Satisfaction – Transactional Feedback	New	Maintain
Customer Focus	Customer Satisfaction	Number of MyAccount Customers	New	Increase
	Canolaction	Number of Online Billing Accounts	New	Increase
	Safety	All Injury/Illness Frequency Rate	New	Reduce
	Salety	Lost Workday Severity Rate	New	Reduce
		Customer Average Interruption Duration Index	Existing	Monitor
		Feeders Experiencing Multiple Sustained Interruptions	Existing	Maintain
		Worst Feeder Analysis – Number of Feeders with Very Poor Performance	Existing	Reduce
	System Reliability	Stations Exceeding Planning Capacity	Existing	≤5%
		Feeders Exceeding Planning Capacity	Existing	≤10%
Operational Effectiveness		Stations Approaching Rated Capacity	Existing	0%
Ellectivelless		Feeders Approaching Rated Capacity	Existing	0%
	Cost Control	Productive Time	Existing	Maintain
		Labour Allocation	Modified	Maintain
		3-Year Average Cost per Pole – Wood Pole Replacement	New	Monitor
	Cost Control	3-Year Average Cost per Meter – Underground Cable	New	Monitor
		Average Cost per Kilometer – Vegetation Management	New	Monitor
		Average Cost per Pole – Pole Test and Inspection	New	Monitor
	Asset Efficiency	Technology Infrastructure Cost per Employee	New	Monitor
		Annual Oil Spills & Costs of Remediation	Existing	Reduce
Public Policy Responsiveness	Environment	Non-Hazardous Waste Diversion Rate	New	Maintain
		Percentage of Green Suppliers	New	Maintain
		OM&A per Customer	New	Monitor
Financial	Financial Mate	Bad Debt as a Percentage of Total Electricity Revenue	New	Monitor
Performance	Financial Metrics	Cumulative Capital Additions per Investment Category	New	Monitor
		Annual Capital Spending per Investment Category	New	Monitor

Consistent with the prescriptions of the RRF, this proposed reporting regime is intended to equip the OEB, customers, and other stakeholders with the ability to better monitor and understand diverse aspects of Hydro Ottawa's performance, and to demonstrate the utility's accountability in transparently communicating the outcomes achieved under its performance management framework.

10. REVENUE REQUIREMENT & BILL IMPACTS

The Revenue Requirement and Bill Impacts associated with Hydro Ottawa's proposed 2021-2025 capital and operational plans are summarized in the tables below.

Table 6 – AS ORIGINALLY SUBMITTED – Revenue Sufficiency/Deficiency (\$'000s)

	2021	2022	2023	2024	2025
Return on Rate Base	\$67,489	\$73,588	\$77,441	\$79,860	\$84,624
Distribution Expenses (not including amortization)	\$93,923	\$96,280	\$98,697	\$101,174	\$103,714
Amortization	\$52,450	\$56,860	\$59,142	\$60,711	\$64,027
Payment in Lieu of Taxes	\$1,024	\$5,211	\$8,766	\$11,660	\$7,689
Service Revenue Requirement	\$214,886	\$231,939	\$244,045	\$253,405	\$260,053
Less Revenue Offsets: Per Approved Settlement Agreement ¹ Adjustment per Pole Attachment Decision ²	\$10,977	\$11,013	\$11,667	\$12,151	\$12,457
Base Revenue Requirement	\$203,909	\$220,926	\$232,378	\$241,254	\$247,596
Transformer Ownership Allowance	\$1,056	\$1,056	\$1,056	\$1,059	\$886
Revenue Requirement from Rates	\$204,965	\$221,982	\$233,434	\$242,312	\$248,483
Forecasted Load at 2020 Rates	\$187,905	\$188,833	\$189,716	\$190,703	\$191,468
Cumulative Revenue Deficiency (over 2020)	\$(17,060)	\$(33,149)	\$(43,719)	\$(51,609)	\$(57,014)
Yearly Revenue Deficiency over 2020	\$(17,060)	\$(16,089)	\$(10,570)	\$(7,891)	\$(5,405)

¹ This refers to the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rate term, which was approved by the OEB in 2015.

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

² This refers to an OEB decision from 2016 which authorized Hydro Ottawa to use a utility-specific rate for pole attachments.

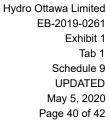

Table 6 – UPDATED FOR 2019 ACTUALS – Revenue Sufficiency/Deficiency (\$'000s)

	2021	2022	2023	2024	2025
Return on Rate Base	\$68,158	\$74,253	\$78,242	\$80,677	\$85,470
Distribution Expenses (not including amortization)	\$93,923	\$96,280	\$98,697	\$101,174	\$103,714
Amortization	\$52,333	\$56,699	\$59,015	\$60,585	\$63,900
Payment in Lieu of Taxes	\$2,224	\$3,881	\$8,604	\$11,533	\$7,590
Service Revenue Requirement	\$216,638	\$231,113	\$244,558	\$253,969	\$260,674
Less Revenue Offsets: Per Approved Settlement Agreement ³ Adjustment per Pole Attachment Decision ⁴	\$11,013	\$10,971	\$11,667	\$12,151	\$12,457
Base Revenue Requirement	\$205,624	\$220,142	\$232,891	\$241,817	\$248,217
Transformer Ownership Allowance	\$1,056	\$1,056	\$1,056	\$1,059	\$886
Revenue Requirement from Rates	\$206,680	\$221,197	\$233,947	\$242,876	\$249,104
Forecasted Load at 2020 Rates	\$187,888	\$188,816	\$189,699	\$190,686	\$191,453
Cumulative Revenue Deficiency (over 2020)	\$(18,792)	\$(32,381)	\$(44,248)	\$(52,190)	\$(57,651)
Yearly Revenue Deficiency over 2020	\$(18,792)	\$(13,589)	\$(11,867)	\$(7,942)	\$(5,461)

³ This refers to the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rate term, which was

approved by the OEB in 2015.

⁴ This refers to an OEB decision from 2016 which authorized Hydro Ottawa to use a utility-specific rate for pole attachments.

Table 7 - AS ORIGINALLY SUBMITTED - Distribution Bill Impacts by Customer Class

	Year-over-Year Distribution % Change					
Rate Class	2021	2022	2023	2024	2025	Average
Residential	4.57%	7.28%	5.73%	2.88%	1.75%	4.44%
GS < 50 kW	2.44%	6.94%	6.59%	3.66%	2.61%	4.45%

Unmetered Scattered Load	3.54%	9.64%	9.61%	6.13%	5.10%	6.80%

11. CONCLUSION

The 2021-2025 period represents a unique moment in time for Hydro Ottawa. It follows on the heels of what was, by numerous measures, a highly successful five-year window in which the utility executed its first-ever Custom IR rate plan. With the benefit of the outcomes and knowledge gained over the course of 2016-2020, the utility is poised to enter the next chapter of

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 9 UPDATED May 5, 2020 Page 42 of 42

its journey towards a smart energy future in a position of strength and with a positive track record.

However, the landscape has shifted appreciably since the OEB last approved a rebasing application from Hydro Ottawa. Despite the robust progress made in replacing aging infrastructure, continued investment to mitigate the risk of asset failure remains a critical priority, with over 19% of assets having reached the end of their useful lives. At the same time, the steady level of growth which the City of Ottawa is experiencing means that expanding the distribution grid and ensuring access for new customers are urgent imperatives as well. Together with the demands posed by more frequent and more acute severe weather events, heightened customer expectations for greater convenience and choice, and the rapid evolution of operational technologies and threats, these pressures present an immensely challenging landscape for Hydro Ottawa to navigate. Against the backdrop of an increasingly complex and fluid policy environment, these pressures are magnified even further.

Accordingly, the utility requires a comprehensive, data-driven, customer-sanctioned roadmap through which it can chart its course for the next five years. Hydro Ottawa is confident that this Business Plan will effectively fulfill this need. The utility welcomes the opportunity to move this strategy forward and to deliver the attendant benefits to its customers and community.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 1 of 37

UPDATED ALIGNMENT WITH THE RENEWED REGULATORY FRAMEWORK

2 3

1

INTRODUCTION 1.

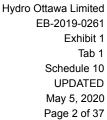

In 2012, the OEB adopted its current performance-based approach to regulation, through the release of its report entitled Renewed Regulatory Framework for Electricity Distributors: A Performance Based Approach (hereafter referred to as the "RRFE Report"). This paradigm, 7 which the OEB has since applied to all rate-regulated utilities under its jurisdiction and has captioned as the "Renewed Regulatory Framework" ("RRF"), is intended to serve several key purposes: act as a more consumer-centric approach to utility regulation; better align the interests of customers and utilities; facilitate the achievement of distinct performance outcomes by utilities; and place a greater focus on delivering value for money.²

12

A cornerstone of the RRF is a set of outcomes, against which utilities are measured as a means of gauging the strength of their overall performance in delivering results that are valued by customers. The categories of RRF performance outcomes are as follows: Customer Focus, Operational Effectiveness, Public Policy Responsiveness, and Financial Performance. Complementing these outcome categories are core principles that underpin the RRF, including "the expectation for continuous improvement, robust integrated planning and asset management that paces and prioritizes investments, strong incentives to enhance utility performance, ongoing monitoring of performance against targets, and customer engagement to ensure utility plans are informed by customer expectations." Rounding out the key components of the RRF is a three-pronged policy platform aimed at facilitating the achievement of performance outcomes: availability of three rate-setting methods, the individual selection of 24 which is at the discretion of the utility, based upon its unique needs and circumstances; 25 formalized requirements for distribution system planning and regional planning; and standards 26 to measure utility performance.

²⁷ Ontario Energy Board, Report of the Board - Renewed Regulatory Framework for Electricity Distributors: A 28 Performance-Based Approach (October 18, 2012).
29 ² Ibid, page 1.

³⁰ Ontario Energy Board, Handbook for Utility Rate Applications (October 13, 2016), page 2.

Since the inception of the RRF, Hydro Ottawa has endeavoured to incorporate RRF principles

2 across its business operations, execute its corporate plans and capital investment programs in

3 accordance with RRF objectives, and continually align its interests with those of its customers.

In particular, Hydro Ottawa believes that this commitment has been on full display throughout its

5 2016-2020 rate term.

6

7 The establishment of the utility's 2016-2020 rate term was enabled by a finding from the OEB

8 that Hydro Ottawa's 2016-2020 Custom Incentive Rate-setting ("Custom IR") application, and

9 the subsequent settlement proposal prepared by parties to the proceeding, met the expectations

of the RRF for a Custom IR.⁴

11

Moreover, in step with the RRF's emphasis on the achievement of performance outcomes, the utility has closely tracked the achievement of RRF performance outcomes over the course of its rate term. This monitoring has taken the form not only of the Electricity Utility Scorecard that is issued annually for all local distribution companies ("LDCs"), but of additional measures and methods as well. Chief among these has been the preparation and filing of an annual report ("CIR Annual Report") to the OEB and parties to the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 Custom IR rate plan. These CIR Annual Reports have provided updates on actual capital expenditures by program type (i.e. System Access, System Service and System Renewal, and General Plant) vs. budgeted capital expenditures by program type and appropriate variance analysis. In addition, the CIR Annual Reports have tracked the utility's continuous improvement using a series of Key Performance Indicators ("KPIs") that were incorporated into Hydro Ottawa's 2016-2020 Distribution System Plan ("DSP"). For additional information on these CIR Annual Reports, please see Exhibit 1-1-11: Proposed Annual Reporting - 2021-2025.⁵

^{26 4} Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015), page 1.

²⁷ These reports are available on Hydro Ottawa's website:

²⁸ https://hydroottawa.com/about-us/regulatory-affairs/custom-incentive-reports.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 3 of 37

1 In addition, Hydro Ottawa has annually prepared a summary of initiatives and outcomes 2 emanating from the 2016-2020 rate plan which align with the outcome categories enshrined in the RRF. These summaries - which have been pro-actively developed on a voluntary basis have helped support the fostering of a culture of continuous improvement across the utility. Copies of these summaries for the years 2016, 2017, and 2018 have been appended to this

Schedule as Attachments 1-1-10(A), (B), and (C), respectively.

7

This Schedule outlines how the Application aligns with the hallmark precepts, objectives, and expectations of the RRF. Specific matters that will be addressed are as follows: broader alignment between Hydro Ottawa's corporate strategic objectives and RRF performance outcomes; customer engagement; rate-setting elements, including selection of the Custom IR option; performance measurement, continuous improvement, and benchmarking; and distribution system planning.

14

15 **2. ALIGNMENT BETWEEN CORPORATE STRATEGY & RRF OUTCOMES**

Before highlighting the specific ways in which this Application aligns with essential features of the RRF, Hydro Ottawa wishes to establish some broader context. Namely, it seems appropriate to first draw attention to the more fundamental alignment between the categories of performance outcomes under the RRF and the principal areas of focus in the utility's business strategy. 20

21

Hydro Ottawa's vision is to serve as the trusted energy advisor for its customers and as a leading partner in a smart energy future. To achieve this vision, the utility has organized its business strategy around four strategic objectives and areas of performance for several years – as represented in Figure 1 below. Hydro Ottawa will maintain continuity in its core objectives 25 heading into the 2021-2025 period. Consistent with past years, the renewed strategic objectives are being formally adopted at the holding company level and will cascade across the enterprise,

28 thereby guiding the business and operations of the regulated distribution utility.

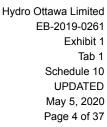

Figure 1 – Corporate Strategic Objectives

Customer Value Corporate

- Customer Value: we will deliver value across the entire customer experience by providing reliable, responsive, and innovative services at competitive rates.
- Organizational Effectiveness: we will achieve performance excellence by cultivating a culture of innovation and continuous improvement.
- Financial Strength: we will create sustainable growth in our business and our earnings by improving productivity and pursuing business growth opportunities that leverage our strengths – our core capabilities, our assets, and our people.
- Corporate Citizenship: we will contribute to the well-being of the community by acting at all times as a responsible and engaged corporate citizen.
- 27 Of these objectives, the most important driver of Hydro Ottawa's business strategy will remain 28 Customer Value, with the utility striving to put the customer at the centre of everything it does.
- 30 The primary objectives animating Hydro Ottawa's corporate vision are wholly consistent with the 31 main performance outcomes promoted under the RRF, as illustrated in Table 1 below. For

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 5 of 37

1 additional context, the table also shows the congruence of Hydro Ottawa's high-level

2 performance goals and strategic outcomes - which are utilized to measure progress in

3 achieving the strategic objectives – with the RRF's areas of focus.

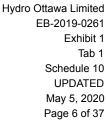

4 5

6

Table 1 – Alignment of Hydro Ottawa's Corporate Strategic Objectives with RRF Performance Outcomes

RRF Performance Outcomes	Hydro Ottawa Strategic Objective	Hydro Ottawa Corporate Performance Goal	Hydro Ottawa Strategic Outcome
Customer Focus	Customer Value	 Assist customers in managing their energy consumption and electricity costs Deliver on customer expectations for service quality and responsiveness Maintain overall distribution system reliability 	Customer loyalty and satisfaction
Operational Effectiveness	Organizational Effectiveness	 Continue to enhance operational performance and productivity Maintain leading health and safety record Enhance organizational and employee capability 	 Efficient and effective operations Safe and healthy work environment Engaged, aligned, and prepared workforce
Public Policy Responsiveness	Corporate Citizenship	 Enhance our brand image in the community and the industry Continue to improve our environmental performance and reduce our impact on the environment 	 Leading governance and business practices Engaged stakeholders Safe, secure and environmentally responsible services Positive community impact
Financial Performance	Financial Strength	Grow revenues from new sources Enhance / protect revenues from existing business lines	Growth in shareholder value

7

1 Hydro Ottawa views this broad alignment as a competitive advantage and as further

2 reinforcement of the imperative - as well as the value - of remaining firmly committed to

3 entrenching RRF principles and objectives throughout its business and operations.

4

5 Against the backdrop of this high-level alignment between its corporate objectives and RRF

6 performance outcomes, Hydro Ottawa will focus the subsequent sections of this Schedule on

7 the alignment of this Application with more specific elements of the RRF.

8

9 3. CUSTOMER ENGAGEMENT

10 The OEB's Handbook for Utility Rate Applications states the following:

1112

13

14

1516

17

18

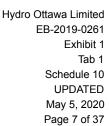

"Customer engagement is foundational to the RRF. Enhanced engagement between utilities and their customers provides better alignment between utility plans and customers' needs and expectations...Utilities are expected to demonstrate value for money by delivering genuine benefits to customers and providing services in a manner which is responsive to customer preferences. Customer engagement is expected to inform the development of utility plans, and utilities are expected to demonstrate in their proposals how customer expectations have been integrated into their plans, including the trade-offs between outcomes and costs."

19 20

Providing customers with value for money and facilitating a customer experience that is driven by choice are cornerstones of Hydro Ottawa's business planning. In step with its overall business strategy to put the customer at the centre of everything it does, the utility endeavours to ensure that its capital and operational investment plans are guided and informed by customer needs, preferences, and priorities. In order to identify and learn about customers' expectations, Hydro Ottawa avails itself of numerous tools and interactions to engage customers on an ongoing basis. Moreover, for the purposes of informing the development of the specific plans and proposals set forth in this Application, Hydro Ottawa undertook targeted outreach to customers as well.

. .

³⁰ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 11.

- 1 For more details on the utility's customer engagement activities, and their consistency with RRF
- 2 expectations for responsiveness to customer priorities and needs, please see Exhibit 1-2-1:
- Customer Engagement Overview and Exhibit 1-2-2: Customer Engagement on the 2021-2025
- Application.

5

RATE-SETTING FRAMEWORK 4. 6

7 The OEB has developed and continues to administer a trio of related policies that are intended

- to facilitate the achievement of the core performance outcomes embedded in the RRF.7 These
- policies are rate-setting, planning, and measuring performance. The remainder of this Schedule
- describes how this Application fulfills the expectations of each of these policies.

11

12 **4.1**. SELECTION OF CUSTOM INCENTIVE RATE-SETTING OPTION

The RRF makes three distinct rate-setting methods available to electricity distributors. The RRFE Report describes them, and their corresponding fitness for the differing circumstances and needs of distributors, as follows: 4th Generation Incentive Rate-setting (suitable for most distributors); Custom Incentive Rate-Setting (suitable for those distributors with large or highly variable capital requirements); and the Annual Incentive Rate-Setting Index (suitable for distributors with limited incremental capital requirements).8

19

In this Application, Hydro Ottawa has opted to avail itself of the Custom IR method. A principal justification for this decision is the sustained need on the horizon for significant levels of capital investment in the utility's distribution system, in order to maintain overall system performance and meet customer preferences – all while safeguarding rates at a reasonable level. This need is the result of several factors, including aging infrastructure, an expanding customer base, continued growth across the City of Ottawa, and the effects of severe weather events. Major capital initiatives that are required over the course of the upcoming rate term include the 27 construction of new distribution stations in growing areas of the city, the connection of

²⁸ ⁷ RRFE Report, page 3.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 9 of 37

This five-year envelope for capital investment translates into an annual average expenditure

requirement of \$100.7M. After accounting for 2019 actuals, this figure increases slightly to

\$100.8M. This figure mirrors (but falls short of) the annual average of capital expenditures

budgeted for in Hydro Ottawa's 2016-2020 Custom IR application, which was \$107.5M. Of note,

this latter figure represents the highest annual average from any multi-year rate term in the

utility's history.9

7

The close alignment of the annual averages for capital expenditures from the 2016-2020 and

2021-2025 rate terms is wholly consistent with the direction signalled in Hydro Ottawa's

2016-2020 Custom IR application, which articulated the expectation that a historically high level

of annual capital expenditures "will be sustained, if not increased, through the decade from

2020-2030."10

13

While Hydro Ottawa's large, multi-year capital investment needs are one of the main drivers

behind the decision to select the Custom IR option, considerations with respect to operational

funding were likewise germane. In particular, the requirement to embed productivity gains into

the annual rate adjustment mechanism helps to ensure greater convergence between Hydro

Ottawa's interests and those of its customers, who wish to see continuous improvement on the

utility's part in delivering outcomes in an efficient and cost-effective manner.

20

Accordingly, Hydro Ottawa maintains that the Custom IR method remains the most suitable

rate-setting option for governing the 2021-2025 rate term. The ensuing sub-sections explain in

greater detail the specifics of the rate-setting framework that the utility has customized for the

24 purposes of its five-year rate plan.

²⁵ For additional information on Hydro Ottawa's 2016-2020 capital expenditures, please see UPDATED Exhibit 2-4-1:

Capital Expenditure Summary.
 Hydro Ottawa Limited, 2016-2020 Custom Incentive Rate-setting Distribution Rate Application, EB-2015-0004

^{28 (}April 29, 2015), Exhibit A-2-1, page 10.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 10 of 37

1 4.2. YEAR ONE - STANDARD REBASING

This Application is based on a Custom IR approach for a five-year period, consistent with the

3 OEB's RRF as set out in the Handbook for Utility Rate Applications. The first Test Year of the

five-year period (2021) is a standard rebasing approach, consistent with the OEB's 4th

Generation Incentive Regulation approach.

6

7 Hydro Ottawa has developed and submitted a forecast of its base revenue requirement for 2021

8 in this Application, as well as detailed forecasts of its costs based on its capital and operational

plans for 2021.11 In keeping with the rate adjustment formula used in its 2016-2020 Custom IR

rate plan, Hydro Ottawa has assumed the Conference Board of Canada's updated inflation rate

of 2.01% for all non-compensation-related costs. The calculated revenue requirement resulting

from these projections is detailed in **UPDATED** Exhibit 6-1-1: Calculation of Revenue Deficiency

or Sufficiency.

14

The forecasted costs in this Application were developed with the benefit of information obtained

from several external and internal benchmarking studies (see Exhibit 1-1-12: Benchmarking).

These studies helped inform Hydro Ottawa's plans and expenditures. In addition, these plans

were developed with the benefit of significant customer engagement including surveys, focus

groups, town hall meetings, special studies, and ongoing day-to-day customer interactions. The

full extent of Hydro Ottawa's customer engagement is detailed in Exhibit 1-2-1: Customer

Engagement Overview and Exhibit 1-2-2: Customer Engagement on the 2021-2025 Application.

22

24

23 4.3. YEARS TWO THROUGH FIVE - RATE FRAMEWORK: CUSTOM PRICE **ESCALATION FACTOR**

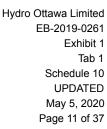

As established by the RRF, under Price Cap Incentive Rate-Setting, rates are adjusted using a

formulaic approach in the years following the first year base rates. This formula consists of a

27 two-component Price Cap Index ("PCI"): inflation and productivity. For electricity distributors, the

²⁸ ¹¹ See UPDATED Exhibit 1-1-9: Business Plan, UPDATED Exhibit 2-4-1: Capital Expenditure Summary, Exhibit 2-4-3:

²⁹ Distribution System Plan, and UPDATED Exhibit 4-1-1: Operations, Maintenance and Administration Summary.

1 formula includes an industry-specific inflation factor and two factors for productivity. One

2 productivity factor is a fixed value for industry-wide productivity. The other is a stretch factor

3 which is set each year based on the level of efficiency the distributor has achieved, as evaluated

4 by the Pacific Economics Group's ("PEG") econometric model.

5

6 Under a Custom IR approach, the annual rate adjustment must be based on a custom index

7 supported by empirical evidence that can be tested. The annual adjustment must include explicit

8 financial incentives for continuous improvement and cost control targets. As noted in the OEB's

9 Handbook for Utility Rate Applications, "these incentive elements, including a productivity factor,

10 must be incorporated through a custom index or an explicit revenue reduction over the term of

11 the plan (not built into the cost forecast)."12

12

13 As a result, Hydro Ottawa is proposing to adopt a Custom Price Escalation Factor ("CPEF") rate

14 framework for years two through five, which is based on the approach approved by the OEB in

15 the utility's 2016-2020 Custom IR application. 13 This framework is aligned with OEB policy and

16 based on sound ratemaking principles. The CPEF incorporates the OEB's key principles and

17 expectations of a Custom IR application, and thus has been structured in a way that:

18 19

20

21

22

23

- Includes productivity gains as part of the rate adjustment mechanism;
- Constrains operational funding increases going forward at approximately the rate of inflation; and
 - Acknowledges the funding requirements to address Hydro Ottawa's significant, multi-year investment needs over the 2021-2025 period.

24

25 The OEB has provided specific guidance with respect to Custom IR applications and

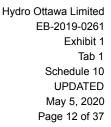

26 expectations for the annual rate adjustment index. The Handbook for Utility Rate

27 *Applications* states the following:

. .

²⁸ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 25.

²⁹ Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015), page 1.

HydroOttawa

"Custom IR: Under this methodology, rates are set for five years considering a five-year forecast of the utility's costs and sales volumes. This method is intended to be customized to fit the specific utility's circumstances, but expected productivity gains will be explicitly included in the rate adjustment mechanism. Utilities adopting this approach will need to demonstrate a high level of competence related to planning and operations.

Index for the Annual Rate Adjustment: The annual rate adjustment must be based on a custom index supported by empirical evidence (using third party and/or internal resources) that can be tested. Custom IR is not a multi-year cost of service; explicit financial incentives for continuous improvement and cost control targets must be included in the application. These incentive elements, including a productivity factor, must be incorporated through a custom index or an explicit revenue reduction over the term of the plan (not built into the cost forecast).

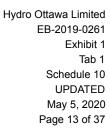

The index must be informed by an analysis of the trade-offs between capital and operating costs, which may be presented through a five-year forecast of operating and capital costs and volumes. If a five-year forecast is provided, it is to be used to inform the derivation of the custom index, not solely to set rates on the basis of multi-year cost of service. An application containing a proposed custom index which lacks the required supporting empirical information may be considered to be incomplete and not processed until that information is provided.

It is insufficient to simply adopt the stretch factor that the OEB has established for electricity distribution IRM applications. Given a utility's ability to customize the approach to rate-setting to meet its specific circumstances, the OEB would generally expect the custom index to be higher, and certainly no lower than the OEB-approved X factor for Price Cap IR (productivity and stretch factors) that is used for electricity distributors."

The CPEF adheres to this guidance and consists of three main components: a custom inflation factor, a two-component productivity factor and a growth factor. Supplementary evidence is supplied in support of each factor below. As previously noted, year one is a traditional rebasing year, with costs allocated and rates set on the basis of a forecast Test Year. Distribution rates in years two through five are adjusted annually by the CPEF, as follows:

. .

³⁶ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13,2016), pages 25-26.

1	CPEF = I - X + G
2	where
3	"I" is the inflation factor (see section 4.3.1 below)
4	"X" is the two-component productivity factor (see section 4.3.2 below)
5	"G" is the growth factor (see section 4.3.3 below)
6	
7	As referenced above, this approach is consistent with the OEB's RRF guidance on Custom IR
8	applications. This formulaic approach with customization reflects Hydro Ottawa's significantly
9	large, multi-year investments within the 2021-2025 period, while embedding productivity savings
10	for the customer.
11	
12	4.3.1. "I" Factor: Inflation Factor
13	In its 2013 report, Rate Setting Parameters and Benchmarking under the Renewed Regulatory
14	Framework for Ontario's Electricity Distributors, the OEB established a methodology for
15	determining its annual inflation factor for use in incentive-based rate adjustment mechanisms. ¹⁵
16	The OEB's two-factor inflation factor is based on the weighted sum of the following sub-indices:
17	
18	 Non-Labour: 70% of the annual percentage change in Canada's Gross Domestic
19	Product Implicit Price Index ("GDP-IPI") Final Domestic Demand ("FDD"), as reported by
20	Statistics Canada; and
21	 Labour: 30% of the annual percentage in the Average Weekly Earnings ("AWE") for
22	workers in Ontario, as reported by Statistics Canada.
23	
24	The OEB's inflation factor can be calculated as follows:

^{25 15} Ontario Energy Board, Report of the Board - Rate Setting Parameters and Benchmarking under the Renewed 26 Regulatory Framework for Ontario's Electricity Distributors, EB-2010-0379 (November 21, 2013), pages 5-11.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 1
Schedule 10
UPDATED
May 5, 2020
Page 14 of 37

Inflation Factor = 0.70 × ΔGDP-IPI (FDD) + 0.30 × ΔAWE (Ontario)

where

GDP-IPI (FDD) is the annual Implicit Price Index for (national) Gross Domestic Product.

AWE (Ontario) is the annual Average Weekly Earnings for Ontario, all businesses except unclassified, including overtime.

6

7 The OEB's inflation factor calculation uses component weights of 30% labour and 70% 8 non-labour. Hydro Ottawa proposes to use an inflation factor consistent with the OEB's 9 approach. However, the utility proposes to use a weighting of the two sub-indices that is more 10 suitable for Hydro Ottawa's historical labour/non-labour split. Hydro Ottawa maintains that a 11 weighting that is more closely aligned with its own labour/non-labour split is more appropriate 12 than the OEB's 70/30 split, as it represents the utility's actual conditions.

13

After an analysis of both historical and forecast operations, maintenance and administration ("OM&A") expenditure data over the 2016-2020 period, Hydro Ottawa has determined that a unique labour/non-labour weighting of 55.5% labour and 44.5% non-labour is appropriate. Table 3 below provides an overview of Hydro Ottawa's labour and non-labour OM&A components, as a percentage of total OM&A.

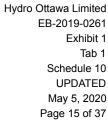

19 20

Table 3 – Hydro Ottawa's Labour/Non-Labour Split (2016-2020)

	2016	2017	2018	2019	2020	5-Year Total
Labour (55.5% weight)	\$72,126,923	\$71,938,869	\$75,204,872	\$75,788,503	\$77,366,800	\$372,425,968
Non-Labour (44.5% weight)	\$54,929,916	\$57,241,300	\$59,383,744	\$61,471,941	\$65,067,573	\$298,094,474
Labour as a % of Gross OM&A	56.77%	55.69%	55.88%	55.22%	54.32%	55.5% (average)

21

22 Hydro Ottawa thus proposes to calculate its inflation factor as follows:

Inflation Factor = $0.445 \times \triangle GDP$ -IPI (FDD) + $0.555 \times \triangle AWE$ (Ontario) 1 2 where GDP-IPI (FDD) is the annual Implicit Price Index for (national) Gross Domestic Product. 3 4 AWE (Ontario) is the annual Average Weekly Earnings for Ontario, all businesses except unclassified, including overtime. 5 6 7 Hydro Ottawa proposes to use a static inflation factor for the duration of this Application's term, 8 and therefore proposes to derive its inflation factor using an average based on historical and 9 forecast data over the 2017-2025 period. Annual GDP-IPI data and AWE historical and projection data for the 2017-2025 period from the Conference Board of Canada is presented in Tables 4 and 5 below, alongside Hydro Ottawa's adjusted labour/non-labour weighting. 16

Table 4 – 2017-2025 GDP-IPI (FDD) Index

Year	GDP-IPI	Hydro Ottawa Non-Labour Weighting	Adjusted GDP-IPI
2017	2.50%	44.46%	2.78%
2018	1.67%	44.46%	1.86%
2019	1.19%	44.46%	1.32%
2020	2.33%	44.46%	2.59%
2021	2.11%	44.46%	2.34%
2022	2.10%	44.46%	2.33%
2023	2.07%	44.46%	2.30%
2024	2.07%	44.46%	2.30%
2025	2.07%	44.46%	2.30%

2024	2.30%	2.41%	2.35%
2025	2.30%	2.41%	2.35%
2017-2025 Average	2.23%	2.29%	2.26%

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 17 of 37

- 1 As shown in Table 6 above, applying Hydro Ottawa's specific labour/non-labour weighting
- 2 factors to the AWE and GDP-IPI indices, and averaging over the 2017-2025 period, yields an
- 3 inflation factor of 2.26%. Hydro Ottawa does not intend to update the inflation factor over the
- course of its 2021-2025 rate term.

5

"X" Factor: Productivity and Stretch Factors 6 **4.3.2.**

7 **4.3.2.1. Productivity Factor**

- 8 There are two components to the X factor: an industry Total Factor Productivity ("TFP")
- 9 component and a stretch factor component. The productivity component is intended to be an
- 10 estimate of industry TFP growth in Ontario's electricity distribution sector. In its 2013 report,
- Productivity and Benchmarking Research in Support of Incentive Rate Setting in Ontario, PEG
- 12 defines TFP growth "as the change in total output quantity minus the change in total input
- 13 quantity."17 PEG's analysis yielded a TFP growth factor of -0.33%, and ultimately, PEG
- 14 recommended a zero TFP factor. 18 In turn, the OEB adopted PEG's recommendation. 19

15

- More recently, the OEB re-affirmed a zero TFP factor in the context of a Custom IR rate filing
- 17 from Hydro One Networks Inc. ("HONI"). During this proceeding, separate reports submitted by
- PEG and another independent third-party expert (Power System Engineering ["PSE"]) both
- recommended a TFP factor of 0.0%. Of note, PSE had updated Ontario industry TFP research
- to 2015 and concluded that TFP continues to decline. The OEB ultimately accepted a TFP of
- 21 0% in its Decision and Order.²⁰

22

- 23 Consistent with the RRFE Report²¹ and the foregoing OEB rulings, Hydro Ottawa proposes to
- 24 adopt the OEB's TFP factor of zero in its CPEF.

²⁹ Regulatory Framework for Ontario's Electricity Distributors (November 21, 2013, corrected December 4, 2013), page

^{30 17.} 31 ²⁰ Ontario Energy Board, *Decision and Order*, EB-2017-0049 (March 7, 2019).

^{32 &}lt;sup>21</sup> RRFE Report, page 17.

1 4.3.2.2. Stretch Factor

2 The second component to the X factor is the stretch factor, which is intended to reflect the

3 incremental productivity gains that distributors are expected to achieve under Incentive

4 Regulation. The OEB has concluded that stretch factors play an important role in Incentive

5 Regulation and "promote, recognize and reward distributors for efficiency improvements relative

6 to the expected sector productivity trend."22

7

8 Under the current methodology, stretch factors are determined based on a distributor's assignment in one of five efficiency assessment rankings. Efficiency assessments are determined using a total cost econometric model developed by PEG, which is updated annually. The PEG model renders a comparison of each distributor's "actual" total costs relative to their predicted costs. Distributors are then placed into one of five cohorts and assigned a corresponding stretch factor based on the percentage difference between actual and predicted costs. Stretch factors range from 0.0% to 0.60%, with lower stretch factors indicating higher efficiency. Since 2015, Hydro Ottawa has been placed in Cohort 4 and assigned a stretch factor of 0.45% in accordance with the PEG model's finding that actual costs have been between 10%-25% above predicted costs.

18

While Hydro Ottawa acknowledges and accepts the value of total cost benchmarking as a measure of productivity and efficiency, as well as the merit of incorporating a productivity factor into its CPEF, the utility is concerned by some of the inherent limitations in the PEG model. These limitations have induced Hydro Ottawa to submit alternative total cost benchmarking analysis as part of this Application. More detailed rationale in support of the utility's approach is outlined in Attachment 1-1-12(E): PEG Benchmarking Forecast.

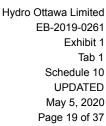

25

26 The total cost benchmarking study included in this Application as Attachment 1-1-12(A) is

27 econometric in nature, similar to the PEG model. The study has been prepared by Clearspring

_ _

²⁸ Ontario Energy Board, *Rate Setting Parameters and Benchmarking under the Renewed Regulatory Framework for* Ontario's Electricity Distributors (November 21, 2013, corrected December 4, 2013), page 19.

Energy Advisors ("Clearspring"). Clearspring's analysis provides an appropriate and empirical basis for setting Hydro Ottawa's stretch factor. As noted in the report, Clearspring's total cost findings for Hydro Ottawa during the Custom IR period demonstrate a total cost benchmarking score of -7.1% below predicted costs, which corresponds to a stretch factor of 0.30%. However, when normalized for two once-in-a-generation expenditures, the value of this factor decreases to 0.15%, with a total cost benchmarking score of -12.5%. This normalization entails the removal of the expenditures and in-service additions for the Facilities Renewal Program ("FRP") and the Cambrian Municipal Transformer Station ("MTS"). These projects are described in Clearspring's report, as follows:

Facilities Renewal Program: The purpose of this program is to (a) consolidate operations and administrative staff; (b) move Hydro Ottawa's operational centers out of high-traffic residential areas to sites with easy access to major highways within the Ottawa area; (c) replace aging buildings; and (d) upgrade operational centers in order to provide better response to customers. Under the program, two parcels of land were purchased, upon which Hydro Ottawa has constructed two regional campuses – namely, the Eastern Operations and Administrative Campus, and the Southern Operations & Warehouse.

This program is a "once in a generation" modernization and operational efficiency initiative. Most of the capital additions for the FRP occur in 2019. This large investment worsens the total cost benchmarking scores throughout the entire Custom IR period.

• Cambrian MTS²³: This project consists of two key components: (1) a new municipal transformer station to be constructed by Hydro Ottawa; and (2) upgrades to existing transmission facilities, as well as construction of a segment of new transmission line by Hydro One. These facilities are required to accommodate customer load growth and increase supply capacity in the South Nepean area of Ottawa, which has already reached the limits of local transformation capacity.

The capital additions for the Cambrian MTS project occur in 2021 and 2022. Therefore, this large investment will worsen the total cost benchmarking scores beginning in 2021 and then throughout the Custom IR period.

The previous name for Cambrian MTS was South Nepean MTS. Clearspring's report retains the original
 nomenclature of South Nepean MTS.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 20 of 37

- 1 Projects of this nature do not occur on a regular basis. In the last decade, Hydro Ottawa built
- 2 only two new transformer stations, neither of which required a transmission investment level of
- 3 the magnitude of Cambrian MTS.24

4

- 5 As noted above, when Clearspring analyzed Hydro Ottawa's total costs in the absence of these
- 6 two projects, the stretch factor dropped to 0.15%:

7 8

9

10

11

12

"The 2021 to 2025 average forecasted results show that if the FRP investment was excluded the score becomes -9.9%. This is just above the threshold to move the stretch factor recommendation from 0.3% to 0.15%. If both the FRP and the South Nepean MTS investments are excluded the total cost benchmarking score for 2021 to 2025 averages -12.5%. If these two investments were not forecasted, this would have pushed the stretch factor recommendation to 0.15%."25

13 14

15 These two projects represent approximately \$180M worth of expenditures incurred in a very short time period (2018-2022). Seeing as the FRP is not of a recurring nature, and a new MTS requiring a major transmission upgrade is a rare investment, it is Hydro Ottawa's position that these projects should be excluded for purposes of determining the utility's stretch factor.

19

"G" Factor: Growth Factor 20 4.3.3.

- Hydro Ottawa's CPEF will include a growth factor to account for the increased costs associated
- with its substantial and steady customer growth. The inclusion of a growth variable in the CPEF
- is warranted in order to capture the change in distribution revenue that would naturally occur (in
- 24 the absence of any rate changes) as a result of an increase in the number of customers over
- 25 the forecast period. The value of the growth factor is determined based upon Hydro Ottawa's
- 26 historical and forecast growth in customers for the period 2012-2020. As shown in Tables 7 and

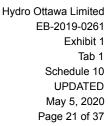

²⁷ The last two MTS projects to go into service were Ellwood MTS in 2012 and Terry Fox MTS in 2014. For more

²⁸ information on these projects, please see Exhibit B, Tab 7, Schedule 1 in the joint application filed by Hydro Ottawa

²⁹ and HONI in EB-2019-0077. This joint application sought Leave to Construct approval for the South

Nepean/Cambrian MTS and the corresponding transmission system upgrades and expansion.

Attachment 1-1-12(A): Econometric Benchmarking Study of Hydro Ottawa's Total Cost and Reliability, page 35.

- 1 8 below, customer growth in Ottawa has been substantial and consistent over that period,
- 2 averaging approximately 1.34% on an annual basis.

3 4

Table 7 – Hydro Ottawa Customer Count (2012-2020)

Rate Class	2012	2013	2014	2015	2016	2017	2018	2019	2020 ²⁶

6 7

Table 8 - Hydro Ottawa Customer Count (2012-2020): Total Change, Total Percentage Change, and Compound Annual Growth Rate ("CAGR")

Hydro Ottawa Customer Growth			
Total Change	34,791		
% Change	11.24%		
CAGR	1.34%		

8

9 According to data from Statistics Canada's 2011 census, the population in the City of Ottawa 10 increased by 8.8% since 2006, which is a faster growth rate than Ontario (5.7%) and Canada as 11 a whole (5.9%).²⁷ Moreover, the City's Official Plan predicts a population growth rate of 16%

12 between 2016 and 2031.28 With additional customers comes the requirement for associated

13 expenditures to serve those customers.

¹⁴ ²⁶ In this instance, the customer count for 2020 represents a forecast based on historical trends. This forecast was 15 developed internally at Hydro Ottawa and was utilized as an input in the preparation of the supporting evidence for

¹⁶ this Schedule prior to the completion of the load forecast which is appended to this Application as **UPDATED**

¹⁷ Attachment 3-1-1(C).

²⁰ City of Ottawa, Official Plan: Volume 1 (May 2003), page 2-3.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 22 of 37

1 Hydro Ottawa's load forecast anticipates modest growth in total energy sales and steady growth

2 in customer count over the 2021-2025 period.²⁹ While a load forecast generally reflects the

3 expected growth in a utility's customer base and energy sales, a growth factor is intended to

4 capture the relationship between the increasing number of customers and the costs to serve

5 them.

7 Hydro Ottawa's proposed approach with its CPEF is not without precedent in the context of

8 utility regulation in Canada. The use of a growth factor has been previously employed and

approved by regulators in Ontario, 30 Québec, 31 Alberta, 32 and British Columbia. 33

10

11 As an expert witness hired by the OEB in HONI's most recent Custom IR proceeding, PEG

12 noted the correlation between customer growth and operating costs as an important factor and

13 recommended that HONI include a customer growth factor in its custom index.³⁴

14

15 Similarly, in a report prepared for the Régie de l'énergie ("Régie") in Québec, PEG has affirmed

16 that "the number of customers served drives the costs of customer services (e.g. billing and

collection) and some distribution costs (e.g. those of metering and connections)...In econometric

research on distribution cost, the customers variable typically has the highest estimated cost

elasticity amongst the scale variables modelled."35 For its part, the Régie has previously

established that it will apply a scaling factor of 0.75 to Hydro Québec Distribution's ("Hydro

21 Québec") growth factor as part of Hydro Québec's mécanisme de réglementation incitative

²² See UPDATED Exhibit 3-1-1: Load Forecast.

³³ Pacific Economics Group, *X Factor Calibration Guidelines for Hydro-Québec Distribution* (May 12, 2019), page 7.

HydroOttawa

("MRI").36

2

3 In addition, since the mid-1990s, electric utility FortisBC Inc. ("FortisBC") has generally used an Average Customer Growth Factor ("ACGF") in its approach to operations and maintenance 5 ("O&M") escalation.³⁷ As approved by the British Columbia Utilities Commission ("BCUC") in 6 Order G-139-14 dated September 15, 2014, 38 FortisBC's current rate plan includes a growth 7 factor of 50% of the ratio of the average number of customers ("AC") one year previous to the 8 average number of customers two years previous, expressed as:

10
$$ACGF = [1 + ((ACt-1 - ACt-2) / ACt-2) \times P\%)]$$

11 where

12 $ACT-1 = customer count at time minus 1$

13 $ACT-2 = customer count at time minus 2$

14 $P = percentage/scaling factor$

15

16 Hydro Ottawa proposes to employ a scaling factor of 0.35 to determine its growth factor, 17 consistent with the approved approaches for FortisBC and Hydro Québec. The selection of this scaling factor was made by considering the scaling factors used in other jurisdictions and taking into account the substantial growth in population and customers in the Ottawa area.

20

Using a scaling factor of 0.35 would render a growth factor in the range of 0.39% and 0.43%, depending on the specific historical years chosen for analysis. For example, using the percentage change in customer count between 2017-2018 and plugging it into the ACGF 24 formula described above would result in a growth rate of 0.39%, as follows:

25

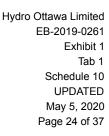

²⁶ "Mécanisme de réglementation incitative" roughly translates into English as "incentive regulation mechanism."

²⁷ FortisBC Inc.'s 1996-2004, 2005-2006, 2007-2011 and 2014-2019 rate plans were approved performance-based

²⁸ rate plans that employed formula based O&M escalation factors based on an I-X index multiplied by the average

 ²⁹ percentage growth of average number of customers.
 30 38 G-139-14: British Columbia Utilities Commission, *Decision and Order, In the Matter of FortisBC Inc. Multi-Year*

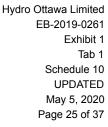

³¹ Performance Based Ratemaking Plan for 2014 through 2018 Decision, (September 15, 2014), page 116.

ACGF = [1 + ((333,621 - 329,926) / 329,926) *0.35]1 2 ACGF = 0.392%3 Similarly, use of the percentage change in customer count between 2016-2017 would yield a 5 growth rate of 0.43%: ACGF = [1 + ((329,926 - 325,913) / 325,913) * 0.35]7 ACGF = 0.431% 8 9 10 Unlike FortisBC, which updates its growth factor annually, Hydro Ottawa does not intend to 11 update the growth factor throughout the term of this Application. 12 13 Based on the foregoing discussion, and in particular, Hydro Ottawa's consistent customer 14 growth rate since 2012, Hydro Ottawa proposes to employ a conservative growth rate near the 15 lower end of the calculated range of 0.40% in its CPEF. This growth rate would remain 16 unchanged over the course of the 2021-2025 period. 17 **Summary – Custom Price Escalation Factor** 18 **4.3.4.** 19 Hydro Ottawa proposes to apply a CPEF to its OM&A over the term of this Application. Similar 20 to the escalation formula approved by the OEB in the utility's last Custom IR application,³⁹ Hydro 21 Ottawa's CPEF consists of three variables:

39 Hydro Ottawa Limited, 2016-2020 Custom Incentive Rate-Setting Distribution Rate Application, EB-2015-0004
 (April 29, 2015).

CPEF = I - X + G1 2 where "I" is Hydro Ottawa's custom Inflation Factor (2.26%) 3 4 "X" is a two-component productivity factor consisting of the OEB's Total Factor Productivity + 5 Hydro Ottawa's custom Stretch Factor (0.0% +0.15%) 6 7 "G" is Hydro Ottawa's customer Growth Factor (0.40%) 8 9 = 2.26% - 0.15% + 0.40% 10 = 2.51% 11

The result of Hydro Ottawa's CPEF is an escalation of 2.51% per year for years two through five of the 2021-2025 Custom IR term. Year one of the Application term is a traditional rebasing year, with rates set on the basis of a forecast Test Year of \$93.9M. Thereafter, each year will be adjusted by the CPEF (2.51%), as shown in Table 9.

17 18

12

Table 9 – 2021 to 2025 Annual OM&A Expenditures (\$'000s)

Year	OM&A	Previous Year	Variance	Variance/ CPEF
2021	\$93,923	N/A	N/A	N/A
2022	\$96,280	\$93,923	\$2,357	2.51%
2023	\$98,697	\$96,280	\$2,417	2.51%
2024	\$101,174	\$98,697	\$2,477	2.51%
2025	\$103,714	\$101,174	\$2,539	2.51%

19

This formulaic adjustment is consistent with the OEB's policy framework under the RRF, where rates charged to customers are de-linked from the costs of operating the utility. The CPEF conforms to OEB guidance for the Index for Annual Rate Adjustment under the Custom IR method (as laid out in the *Handbook for Utility Rate Applications*), as it accomplishes all of the

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 26 of 37

1 following:

2

6

7 8

9

10

11

12

- It is based on a custom index supported by empirical evidence that can be tested;
- Explicit financial incentives for continuous improvement and cost control targets are
 included in this Application and incorporated through the CPEF;
 - The CPEF does not adopt the stretch factor that the OEB has established for electricity incentive regulation mechanism applications;
 - The CPEF is higher than the OEB approved index (I-X) used for electricity distributors under Price Cap IR; and
 - The application of the CPEF resulted in a reduction of OM&A spending over the 2021-2025 period of \$13.1M. These savings will be achieved, in part, through productivity gains as described in Exhibit 1-1-13: Productivity and Continuous Improvement Initiatives.

1314

15 4.4. EARNINGS SHARING MECHANISM

The OEB has clarified that electricity distributors which are filing Custom IR applications are expected to propose one or more mechanisms to protect customers from excessive utility earnings.⁴⁰ In this Application, Hydro Ottawa proposes to include two such mechanisms.

19

- The first is an earnings sharing mechanism ("ESM"). ESMs permit the sharing of utility earnings with customers when earnings rise above or fall below a certain threshold. Under an ESM,
- 22 earnings may be passed along to customers in the form of rate reductions or rate offsets.

23

- 24 Hydro Ottawa is proposing an asymmetrical ESM such that the utility would only share earnings
- 25 that exceed a basis point threshold above the utility's return on equity ("ROE"), with no
- 26 corresponding adjustment if its earnings fall below the basis point threshold.

27

28 The proposed ESM formula is as follows:

²⁹ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 27.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 27 of 37

1

Table 10 - Proposed ESM Formula

#	Threshold	Treatment
1	Under earning	Borne entirely by shareholder
2	0-150 basis points	Fully retained by shareholder
3	Above 150 basis points	50:50 sharing of ratepayer/shareholder

2

3 Additional detail on the proposed ESM is set forth in Exhibit 9-2-1: New Deferral and Variance

4 Accounts.

5

6 **4.5**. **OFF-RAMP(S)**

7 The second mechanism which Hydro Ottawa proposes to include as a means of protecting

8 customers against excessive utility earnings is an off-ramp. Similar to its 2016-2020 Custom IR

9 application, this Application proposes to apply the OEB's existing policy with respect to

10 off-ramps, wherein a regulatory review may be initiated in the event that an electricity distributor

11 performs outside of an annual ROE dead band of plus or minus 300 basis points.

12

13 **4.6. Z FACTOR(S)**

In its *Handbook for Utility Rate Applications*, the OEB affirmed its policy that "[a]n acceptable adjustment during a Custom IR term is a Z factor mechanism for cost recovery of unforeseen events." In step with this guideline, Hydro Ottawa intends to reserve its right over the course of

7 the 2021-2025 rate term to file a Z factor application in order to recover costs resulting from

8 unforeseen events, decisions, or activities, the results of which cannot be reasonably

19 anticipated or quantified at this juncture and where the costs exceed Hydro Ottawa's materiality

0 threshold. Examples include unforeseen weather events or changes to laws or regulations

21 which would require significant investment to implement.

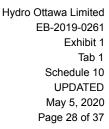

22

23 Please see Exhibit 9-2-1: New Deferral and Variance Accounts for additional information on Z

24 factors.

_ _

²⁵ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 27.

1 4.7. CAPITAL VARIANCE ACCOUNT

In this Application, Hydro Ottawa proposes to sustain the use of a variance account wherein it will track, on an annual basis, variances in the cumulative revenue requirement arising from variances in the forecasts for the four key categories of capital spending: System Access, System Service and System Renewal, and General Plant.⁴² The creation and use of such a variance account was sanctioned as part of the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rates. The utility believes that the administration of this capital variance account on an ongoing basis is an effective means of ensuring transparency and accountability in the planning, execution, and reporting of annual capital expenditures. Accordingly, it is proposed to remain in effect for the 2021-2025 period, and to retain the general design of the account that has been utilized during the 2016-2020 rate term, namely:

12

13

1415

16

17

18

20

21

22

23

24

25

26

- Variances will be calculated by reference to the current forecast for each of the four categories in each year;
- Variances and associated revenue requirement impacts will be calculated and tracked on an annual basis;
- In each year of the 2021-2025 Custom IR plan, if Hydro Ottawa adds to rate base less
 than its forecast cumulative amount in any of the four categories, the corresponding
 reduction in revenue requirement will be credited to the variance account and any
 cumulative reduction in revenue requirement in any of the four categories will be
 disposed of at the end of the term of the Custom IR plan;
- Each year, Hydro Ottawa will estimate the impact of the revenue requirement resulting from the variance in its cumulative capital additions for each of the four capital additions budgets;
- Disposition of any underspending in the four categories, on a cumulative basis, will be at the conclusion of the five-year Custom IR term; and

²⁷ For its 2016-2020 Custom IR rate plan, Hydro Ottawa was granted approval to merge System Renewal and

²⁸ System Service into one category for purposes of this variance account and annual reporting. This approach reflected

²⁹ Hydro Ottawa's standard operating practice to shift funds between the two categories, as warranted by customer and

³⁰ operational requirements. Hydro Ottawa is planning to maintain this approach during the 2021-2025 rate term, with

³¹ some modifications, as explained in further detail below.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 29 of 37

• If, at the end of the five-year Custom IR plan, there has been overspending in any category, there will be no charge to the customer.

2

1

4 One important modification to the capital variance account that Hydro Ottawa is proposing to introduce for 2021-2025 is the use of a separate sub-account for System Access capital expenditures. The rationale for this proposal is that capital spending in this category is driven by customer requests and is therefore difficult to predict, as the level of required expenditure is outside of Hydro Ottawa's control.

9

By proposing the calculation of the annual variance on a cumulative basis, Hydro Ottawa's intent is to ensure that if projects are delayed, but are completed as planned at a later time, then the reduction to revenue requirement will only reflect the period of delay and will cease when the projects have been added to rate base.

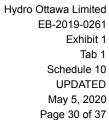

14

15 For additional information on the capital variance account, please see Exhibit 9-2-1: New 16 Deferral and Variance Accounts.

17

18 4.8. CCRA PAYMENTS DEFERRAL ACCOUNT

Similar to the Capital Variance Account discussed above, Hydro Ottawa proposes to continue the use of a variance account to record the revenue requirement impact of Connection Cost Recovery Agreement ("CCRA") payments made to HONI commencing in the year in which the facilities to which each CCRA payment relates provides services to Hydro Ottawa customers. In step with the administration of this account over the 2016-2020 rate term, for the 2021-2025 Custom IR plan Hydro Ottawa intends to record depreciation, interest, return, and payment in lieu of taxes components of revenue requirement impact as CCRA-related assets are put into service. The balance will be disposed as part of the Group 2 Accounts and according to the OEB's direction regarding the disposition of Group 2 Accounts.

1 It is Hydro Ottawa's intent to utilize this account for purposes of new CCRA payments and for

2 true-ups.

3

For additional information, please see Exhibit 9-2-1: New Deferral and Variance Accounts.

5

6 5. PERFORMANCE MEASUREMENT

7 As described by the OEB, the RRF is fundamentally a "comprehensive performance-based approach to regulation that promotes the achievement of performance outcomes that will benefit

9 existing and future customers."43 The RRF's four categories of performance outcomes -

10 Customer Focus, Operational Effectiveness, Public Policy Responsiveness, and Financial

11 Performance – serve as the lodestar for the framework and the focal point towards which the

2 other core components gravitate and culminate. Accordingly, another key component in the

3 OEB's basket of RRF implementation policies is measuring utilities' performance and setting

14 expectations for continuous improvement in the delivery of services and benefits to customers.

15

16 This Application includes several features that comport with the RRF's emphasis on performance measurement, monitoring, and reporting.

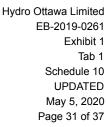

18

9 5.1. CUSTOM PERFORMANCE SCORECARD

As detailed above, Hydro Ottawa embedded a robust framework for performance measurement into its 2016-2020 rate plan. This framework represented a blend of OEB performance measures that were – and continue to be – standardized in their application to all rate-regulated distributors (i.e. through the Electricity Utility Scorecard), along with a series of unique KPIs and reporting measures that were customized in their application to Hydro Ottawa. Pursuant to the RRFE Report and the Approved Settlement Agreement governing the utility's 2016-2020 rate term, Hydro Ottawa committed to an annual cycle of reporting on these KPIs, as well as on capital expenditures in each of the four principal categories of spending (System Access, System Renewal and System Service, and General Plant).

. .

²⁹ ⁴³ RRFE Report, page 55.

1 In 2016, the OEB formally clarified its expectation that the annual Electricity Utility Scorecard

2 cannot constitute, on its own, an electricity distributor's performance measurement framework.

3 The Handbook for Utility Rate Applications confirmed that, while the OEB had already

established a standardized scorecard for all distributors, "additional performance metrics should

also be proposed so that expected outcomes can be monitored."44

6

7 For the 2021-2025 rate period, Hydro Ottawa is therefore proposing an extension and expansion of its previous framework for performance measurement and reporting. This subsequent iteration of the framework will build upon the success of the preceding one and maintain the approach of combining standard OEB performance measures with ones that are customized for Hydro Ottawa's unique use. What's more, the framework will incorporate customized enhancements that seek to implement lessons learned and findings from the prior rate plan, to strengthen the linkages between customer priorities and Hydro Ottawa's programs, and to incorporate key results from the benchmarking performed by the utility to compare its performance against that of its peers. Through this framework and Hydro Ottawa's use of a Custom Performance Scorecard, the OEB, customers, and other stakeholders will be equipped with quantitative tools with which to effectively measure the utility's performance in achieving customer-focused outcomes.

19

For a more detailed description of the proposed performance measurement framework, and the accompanying reporting plan, please see Exhibit 1-1-11: Proposed Annual Reporting -2021-2025. 22

23

24 **5.2.** BENCHMARKING

- 25 A key tool in the RRF performance measurement toolkit is benchmarking. In its original RRFE
- 26 Report, the OEB found that "[e]xpanded use of benchmarking will be necessary to support the
- 27 Board's renewed regulatory framework policies."45 This finding is affirmed in the Handbook for

²⁸ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 26.

²⁹ ⁴⁵ RRFE Report, page 59.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 32 of 37

1 *Utility Rate Applications*, which conveys the OEB's expectation for utilities "to provide 2 benchmarking analysis which supports their proposed plans and programs and demonstrates 3 continuous improvement."⁴⁶

4

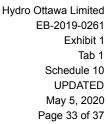

This Application includes several pieces of benchmarking evidence, which are intended to serve multiple purposes. First and foremost, the inclusion of benchmarking information will assist the OEB in evaluating Hydro Ottawa's patterns of performance and in assessing the proposals set forth in the utility's capital and operational plans. Second, the benchmarking that has either been conducted or commissioned by Hydro Ottawa has helped inform the establishment and incorporation of specific outcomes into the performance measurement framework for the 2021-2025 rate period. It has also influenced the development of the Custom Price Escalation Factor, which is a defining feature of the Custom IR rate-setting framework underpinning this Application (see section 4.3 in this Schedule). Third, the use of such studies and analyses is directed at supporting the achievement of the utility's own corporate strategic objective of Organizational Effectiveness, which is interpreted as the pursuit of performance excellence through the cultivation of a culture of innovation and continuous improvement. Together, these functions will help ensure that Hydro Ottawa remains accountable to the OEB, its customers, and other stakeholders with respect to providing value for money and cost-effective delivery of outcomes.

20

Consistent with OEB requirements, the benchmarking evidence appended to this Application takes two forms – internal and external. The internal benchmarking primarily relies upon metrics utilized in the annual Electricity Utility Scorecard, the OEB's annual *Yearbook of Electricity Distributors*, and annual PEG Benchmarking Updates to assess Hydro Ottawa's performance and continuous improvement over time. The external benchmarking consists of analysis conducted by Hydro Ottawa, in which the utility's performance is juxtaposed against that of a select subset of the electricity distributor community in Ontario. It also consists of a series of reports commissioned from third-parties, for the purpose of analyzing the utility's performance in

_

²⁹ ⁴⁶ Ontario Energy Board, *Handbook for Utility Rate Applications* (October 13, 2016), page 18.

a range of categories and measures relative to a comparator group of utilities located either in
 Ontario, Canada, and/or the United States. These reports are as follows:

3

5

6 7

- "Econometric Benchmarking Study of Hydro Ottawa's Total Cost and Reliability" –
 Clearspring Energy Advisors
- "Unit Costs Benchmarking Study" UMS Group
 - "IT Budget Assessment Benchmark" Gartner Consulting
 - "2019 Market Benchmarking" Mercer Canada

9

8

These benchmarking analyses have yielded important insights into Hydro Ottawa's performance and efficiency over the last several years, and into the costs of key programs relative to the utility's peers. In varying measures, the results from these studies have been reflected in different aspects of this Application, whether serving to validate certain proposals and plans or prompting modifications to others, such that the ongoing achievement of efficiencies can be ensured over the course of the 2021-2025 rate period.

16

17 For further details, please see Exhibit 1-1-12: Benchmarking.

18

9 5.3. PRODUCTIVITY & CONTINUOUS IMPROVEMENT

20 Productivity and continuous improvement feature prominently in the architecture of the OEB's 21 performance-based approach to utility regulation. The *Handbook for Utility Rate Applications*, for 22 example, states that "a key objective of incentive regulation is to drive productivity 23 improvements within the utilities." Moreover, these themes are embedded in the OEB's 24 description of the second performance outcome category underpinning the RRF, Operational 25 Effectiveness: "continuous improvement in productivity and cost performance is achieved; and 26 utilities deliver on system reliability and quality objectives." What's more, the various 27 rate-setting methods that are made available under the RRF apply a productivity factor to

.

²⁸ Ontario Energy Board, *Handbook for Utility Rate Applications*, page 27.

²⁹ ⁴⁸ RRFE Report, page 2.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 UPDATED May 5, 2020 Page 34 of 37

1 electricity distributors which is derived from industry productivity trends determined by the OEB.

2 These productivity factors are entrenched in the rate adjustment mechanisms governing utility

proposals and reflect the OEB's expectation that standard business practice for distributors will

4 involve the achievement of incremental productivity gains.

5

Responsibly controlling costs and focusing on cost-effective delivery of outcomes that matter to customers remain core priorities for Hydro Ottawa. Amidst the unique confluence of demands, pressures, and constraints on operations, the utility is placing increased emphasis on incorporating productivity and continuous improvement gains, so as to offset increasing expenditures and boost organizational capacity. Hydro Ottawa is therefore committed to ensuring that productivity and continuous improvement serve as hallmarks of its 2021-2025 rate

1213

plan.

A retrospective glance at the outcomes and efficiencies derived from productivity initiatives during the preceding five-year rate period demonstrates that there is a firm foundation upon which to build. During the 2016-2020 period, Hydro Ottawa successfully executed a wide spectrum of initiatives which resulted in tangible savings to customers – and at no expense to service quality or system reliability.

19

Hydro Ottawa is set to continue strengthening its culture of continuous improvement over the course of its next five-year rate term – whether through harnessing the potential of new technologies and solutions to better serve customers, elevating standards of business performance and excellence, or rationalizing and re-purposing resources.

24

Of note, there are particular controls that Hydro Ottawa has adopted to provide the OEB, customers, and other stakeholders with robust assurance that productivity, cost control, and continuous improvement objectives have been firmly integrated into the utility's business planning process, and the resultant capital and operational plans, for the 2021-2025 rate period. Foremost among these is the design of the Custom IR rate-setting framework that serves as the

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 1 Schedule 10 **UPDATED** May 5, 2020 Page 35 of 37

1 basis of this Application. As discussed above, the Custom Price Escalation Factor will embed 2 productivity savings for customers by capping any increases to operational funding at 3 approximately the rate of inflation. Similarly, in preparing their plans and budgets for the 4 five-year rate term, each administrative division within the utility was mandated to demonstrate productivity savings in a quantitative and/or qualitative fashion and to identify initiatives 6 dedicated to continuous improvement. 49 Moreover, Hydro Ottawa will continue to administer a 7 performance management framework that ensures accountability in the monitoring and 8 reporting of corporate productivity against a defined set of targets and metrics.

9

Along with other measures, the aforementioned internal controls can provide confidence that Hydro Ottawa is well-positioned to continue strengthening its culture of continuous improvement 12 and producing significant savings for customers over the course of its next rate period.

13

A more detailed examination of Hydro Ottawa's productivity record and culture is included in 15 Exhibit 1-1-13: Productivity and Continuous Improvement Initiatives. This examination is both retrospective and prospective in nature – i.e. surveying the productivity accomplishments of the 2016-2020 rate period as well as identifying the productivity efforts that are planned for 2021-2025. 18

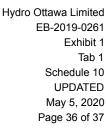

19

6. DISTRIBUTION SYSTEM PLANNING 20

Alongside the availability of various rate-setting options and expectations for performance measurement, the third and final policy that the OEB has adopted to help facilitate achievement of RRF performance outcomes is the requirement for utilities to engage in long-term planning. The RRFE Report affirms that "[a]n integrated approach to planning will provide a foundation for 25 the setting of distribution rates and lead to optimized investments that support the achievement

²⁶ Please see Attachment 1-1-9(A): Corporate Memorandum - 2020-2025 Priorities and Budget Guidelines. This

²⁷ memorandum was issued by Hydro Ottawa's Chief Financial Officer to members of the executive team in January

1 of the outcomes identified by the Board."50 Through the RRF, the OEB has established a firm 2 expectation for distributors to file five-year capital plans to support their rate applications.

3

4 In step with RRF requirements, Hydro Ottawa has formulated a consolidated Distribution System Plan ("DSP"), which provides a detailed and comprehensive view of the utility's investment plans and supporting information for the 2021-2025 period. The DSP is a core 7 deliverable emerging from multiple internal and external planning processes related to capital investment, asset management, regional planning, customer engagement, and business strategy. Hydro Ottawa's DSP details the planning process used to identify the risks and opportunities in the systems of assets and translate them into an expenditure plan. In addition, the DSP outlines how capital investments will be prioritized, paced, and optimized, while minimizing rate impacts for customers and facilitating continuous improvement and productivity. The DSP serves as a continuation of Hydro Ottawa's 2016-2020 plan, which focused on the enhancement of system capacity to keep pace with growth and shifts in loads within the service 15 territory, and on the renewal of aged and aging infrastructure at risk of failure.

16

In preparing the DSP, Hydro Ottawa was guided by the needs and preferences expressed by its customers: (i) keeping distribution rates low; (ii) maintaining reliability; and (iii) investing in new technology. Consultations with customers revealed strong support for making proactive investments in aging infrastructure and grid modernization, with the understanding that this may lead to near-term costs but will result in future savings. What's more, customers confirmed that they place considerable value on accelerated restoration times following extreme weather events and on a reduction in the number and frequency of outages.

24

25 The DSP represents the minimum level of investment needed to achieve a balance between 26 pressures on the distribution system and the top priorities of customers – all while avoiding the 27 accumulation of risk and declines in performance over the long-term.

Report of Management

Management is responsible for the integrity of the financial data reported by Hydro Ottawa Limited ['the Company']. Fulfilling this responsibility requires the preparation and presentation of financial statements and other data using management's best judgment, estimates and International Financial Reporting Standards as issued by the International Accounting Standards Board.

Management maintains appropriate systems of internal control and corporate-wide policies and procedures, which provide reasonable assurance that the Company's assets are safeguarded and that financial records are relevant and reliable.

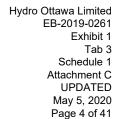

The Board of Directors of the Company, with the advice of the Audit Committee of Hydro Ottawa Holding Inc., ensures that management fulfills its responsibility for financial reporting and internal control. At regular meetings, the Audit Committee, including the Chair of the Board of Directors of the Company, reviews internal controls and financial reporting matters with management for Hydro Ottawa Holding Inc. and its subsidiaries. The Chair of the Board of Directors of the Company, as well as the Chief Executive Officer and the Chief Financial Officer, advise the Board of Directors of the Company of any matters of concern raised by the Audit Committee in reviewing the financial affairs of the Company.

On behalf of Management,

Bryce Conrad

President and Chief Executive Officer

Geoff Simpson
Chief Financial Officer

KPMG LLP 150 Elgin Street, Suite 1800 Ottawa ON K2P 2P8 Canada Telephone 613-212-5764 Fax 613-212-2896

INDEPENDENT AUDITORS' REPORT

To the Shareholder of Hydro Ottawa Limited

Opinion

We have audited the financial statements of Hydro Ottawa Limited (the "Entity"), which comprise:

- the balance sheet as at December 31, 2019
- · the statement of income for the year then ended
- the statement of comprehensive income for the year then ended
- the statement of changes in equity for the year then ended
- the statement of cash flows for the year then ended
- and notes to the financial statements, including a summary of significant accounting policies

(Hereinafter referred to as the "financial statements").

In our opinion, the accompanying financial statements, present fairly, in all material respects, the financial position of the Entity as at December 31, 2019, and its financial performance and its cash flows for the year then ended in accordance with International Financial Reporting Standards (IFRS).

Basis for Opinion

We conducted our audit in accordance with Canadian generally accepted auditing standards. Our responsibilities under those standards are further described in the "Auditors' Responsibilities for the Audit of the Financial Statements" section of our auditors' report.

We are independent of the Entity in accordance with the ethical requirements that are relevant to our audit of the financial statements in Canada and we have fulfilled our other ethical responsibilities in accordance with these requirements.

We believe that the audit evidence we have obtained is sufficient and appropriate to provide a basis for our opinion.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3 Schedule 1 Attachment C UPDATED May 5, 2020 Page 5 of 41

Responsibilities of Management and Those Charged with Governance for the Financial Statements

Management is responsible for the preparation and fair presentation of the financial statements in accordance with International Financial Reporting Standards (IFRS), and for such internal control as management determines is necessary to enable the preparation of financial statements that are free from material misstatement, whether due to fraud or error.

In preparing the financial statements, management is responsible for assessing the Entity's ability to continue as a going concern, disclosing as applicable, matters related to going concern and using the going concern basis of accounting unless management either intends to liquidate the Entity or to cease operations, or has no realistic alternative but to do so.

Those charged with governance are responsible for overseeing the Entity's financial reporting process.

Auditors' Responsibilities for the Audit of the Financial Statements

Our objectives are to obtain reasonable assurance about whether the financial statements as a whole are free from material misstatement, whether due to fraud or error, and to issue an auditors' report that includes our opinion.

Reasonable assurance is a high level of assurance, but is not a guarantee that an audit conducted in accordance with Canadian generally accepted auditing standards will always detect a material misstatement when it exists.

Misstatements can arise from fraud or error and are considered material if, individually or in the aggregate, they could reasonably be expected to influence the economic decisions of users taken on the basis of the financial statements.

As part of an audit in accordance with Canadian generally accepted auditing standards, we exercise professional judgment and maintain professional skepticism throughout the audit.

We also:

- Identify and assess the risks of material misstatement of the financial statements, whether due to fraud or error, design and perform audit procedures responsive to those risks, and obtain audit evidence that is sufficient and appropriate to provide a basis for our opinion.
 - The risk of not detecting a material misstatement resulting from fraud is higher than for one resulting from error, as fraud may involve collusion, forgery, intentional omissions, misrepresentations, or the override of internal control.
- Obtain an understanding of internal control relevant to the audit in order to design audit procedures that are appropriate in the circumstances, but not for the purpose of expressing an opinion on the effectiveness of the Entity's internal control.
- Evaluate the appropriateness of accounting policies used and the reasonableness of accounting estimates and related disclosures made by management.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3 Schedule 1 Attachment C UPDATED May 5, 2020 Page 6 of 41

- Conclude on the appropriateness of management's use of the going concern basis of accounting and, based on the audit evidence obtained, whether a material uncertainty exists related to events or conditions that may cast significant doubt on the Entity's ability to continue as a going concern. If we conclude that a material uncertainty exists, we are required to draw attention in our auditors' report to the related disclosures in the financial statements or, if such disclosures are inadequate, to modify our opinion. Our conclusions are based on the audit evidence obtained up to the date of our auditors' report. However, future events or conditions may cause the Entity to cease to continue as a going concern.
- Evaluate the overall presentation, structure and content of the financial statements, including the disclosures, and whether the financial statements represent the underlying transactions and events in a manner that achieves fair presentation.
- Communicate with those charged with governance regarding, among other
 matters, the planned scope and timing of the audit and significant audit findings,
 including any significant deficiencies in internal control that we identify during our
 audit.

1. DESCRIPTION OF BUSINESS AND CORPORATE INFORMATION

Hydro Ottawa Limited [the 'Company'] was incorporated on October 3, 2000 pursuant to the *Business Corporations Act* (Ontario) as mandated by the Ontario government's *Electricity Act, 1998.* The Company is a wholly owned subsidiary of Hydro Ottawa Holding Inc., which in turn is wholly owned by the City of Ottawa. The Company is incorporated and domiciled in Canada with the registered head office located at 2711 Hunt Club Road, Ottawa, Ontario, K1G 4G2.

Hydro Ottawa Limited is a regulated electricity distribution company that owns and operates electricity infrastructure in the City of Ottawa and the Village of Casselman and is responsible for the safe, reliable delivery of electricity to homes and businesses in its licensed service area. In addition to billing for distribution services, Hydro Ottawa Limited invoices customers for amounts it is required to pay to other organizations in Ontario's electricity system for providing wholesale generation and transmission services.

2. BASIS OF PRESENTATION

(a) Statement of compliance

These financial statements have been prepared by management on a going-concern basis in accordance with International Financial Reporting Standards ['IFRS'], and have been approved and authorized by the Company's Board of Directors for issue on April 16, 2020.

(b) Basis of measurement

The Company's financial statements are prepared on a historical cost basis, except for the valuation of other employee future benefits as disclosed in Note 3(k)(ii).

(c) Functional and presentation currency

These financial statements are presented in Canadian dollars, which is the Company's functional currency.

(d) Use of estimates and judgments

The preparation of financial statements in conformity with IFRS requires management to make estimates, judgments and assumptions that affect the reported amounts of revenue, expenses, assets, liabilities and the disclosure of contingent assets and liabilities at the date of the financial statements.

Due to the inherent uncertainty involved in making such estimates, actual results could differ from estimates recorded in preparing these financial statements, including changes as a result of future decisions made by the Ontario Energy Board ['OEB'] or the Ontario provincial government. Management reviews its estimates and judgments on an ongoing basis using the most current information available. The financial statements have, in management's opinion, been properly prepared using careful judgment within reasonable limits of materiality and within the framework of the significant accounting policies. Significant areas where estimates and judgments are made in the application of IFRS are as follows:

i. Accounts receivable

Accounts receivable, which includes unbilled receivables, are reported based on the amounts expected to be recovered less a loss allowance for expected credit losses. Management utilizes historical loss experience and forward-looking information in conjunction with the aging and arrears status of accounts receivable at year-end in the determination of the allowance.

(d) Use of estimates and judgments [continued]

ii. Regulatory balances

The recognition and measurement of regulatory balances is subject to certain estimates, judgments and assumptions, including assumptions made in the interpretation of the OEB's regulations and decisions. The Company continues to assess the likelihood of recovery of all regulatory debit balances subject to recovery through a future rate filing. The absence of OEB approval is a consideration in this evaluation.

iii. Useful lives of depreciable assets

Depreciation and amortization expense is calculated based on estimates of the useful lives of property, plant and equipment, intangible assets and investment properties. Management estimates the useful lives of the various types of assets using assumptions and estimates of life characteristics of similar assets based on a long history of industry experience.

iv. Impairments of non-financial assets

Non-financial assets are reviewed by management for impairment using the future cash flows method. By their nature, estimates of future cash flows, including estimates of future capital expenditures, revenue, operating expenses, discount rates and market pricing are subject to measurement uncertainty.

v. Employee future benefits

The measurement of employee future benefits involves the use of numerous estimates and assumptions. Actuaries make assumptions for items such as discount rates, future salary increases and mortality rates in the determination of benefits expenses and accrued benefit obligations.

vi. Capital contributions

The timing of the satisfaction of performance obligations for capital contributions from customers is subject to certain estimates and assumptions.

vii. Deferred income taxes

Tax interpretations, regulations and legislation in which the Company operates are subject to change. Deferred income tax assets are assessed by management at the end of each reporting period to determine the likelihood that they will be realized from future taxable income.

3. SIGNIFICANT ACCOUNTING POLICIES

(a) Regulation

The Company is regulated by the OEB under the authority of the *Ontario Energy Board Act, 1998*. The OEB is charged with the responsibilities of approving or setting rates for the transmission and distribution of electricity, and ensuring that distribution companies fulfill obligations to connect and service customers.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3 Schedule 1 Attachment C UPDATED May 5, 2020 Page 14 of 41

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(a) Regulation [continued]

For fiscal year ended December 31, 2019, the Company continued to operate under a custom incentive rate-setting application ['Custom IR'] prescribed by the OEB. The Custom IR is one of the rate setting options contained in the *Renewed Regulatory Framework for Electricity Distributors: A Performance-Based Approach* policy. The Company filed a custom incentive rate-setting application with the OEB on April 29, 2015 seeking approval to change the rates that the Company charges for electricity delivery, retail services, allowances, loss factor and specific services charges for a period of five years, to be effective January 1, 2016 to December 31, 2020. This application requested a revenue requirement to recover costs, and provide a rate of return on a deemed capital structure applied to rate base assets. The key components of the Company's Custom IR framework included the establishment of several regulatory accounts, namely: an asymmetrical earnings sharing mechanism variance account, revenue requirement differential variance account related to capital additions, new facilities deferral account, connection cost recovery agreement deferral account, and the efficiency adjustment mechanism deferral account. An annual IR application is required to set rates each year for 2017 to 2020. 2019 rates were set based on the Company's Year 4 IR annual update.

The Company applies for distribution rates based on estimated costs. Once rates are approved, they are not adjusted as a result of actual costs being different from those that were estimated, other than for certain prescribed costs that are eligible for deferral treatment and are either collected or refunded in future rates.

In January 2014, the International Accounting Standards Board ['IASB'] issued IFRS 14 – Regulatory Deferral Accounts ['IFRS 14'], which permits rate-regulated entities to use its existing rate-regulated activities practices if and only if, in its first IFRS financial statements, it recognized regulatory deferral account balances by electing to apply the requirements of IFRS 14

The Company has determined that certain debit and credit balances arising from rate-regulated activities qualify for the application of regulatory accounting treatment in accordance with IFRS 14 and the accounting principles prescribed by the OEB in the *Accounting Procedures Handbook for Electricity Distributors*. Regulatory debit and credit balances primarily represent costs that have been deferred because it is probable that they will be recovered in future rates, revenues that are required to be returned or collected to/from customers or balances that arise from differences in amounts billed to customers for electricity services and the costs that the Company incurs to purchase these services.

Regulatory balances principally comprise the following:

- Regulatory asset/liability refund account ['RARA'] consists of balances of regulatory assets or regulatory liabilities approved for disposition by the OEB through temporary additional rates referred to as rate riders.
- Settlement variances relate primarily to the charges the Company incurred for transmission services, commodity, wholesale market operations and global adjustment in comparison to those settled with customers during the year.
 The nature of the settlement variances is such that the balance can fluctuate between assets and liabilities over time, and they are reported at year-end dates in accordance with rules prescribed by the OEB.
- Lost Revenue Adjustment Mechanism ['LRAM'] account tracks and disposes of lost electricity distribution revenues that result from Conservation and Demand Management ['CDM'] programs.
- Earnings Sharing Mechanism ['ESM'] variance account captures 50% of any regulated earnings above Hydro Ottawa's approved return on equity for years 2016 to 2020.
- Facilities Y Factor captures the revenue requirement impacts arising from capital costs related to the new administrative and operations facilities for years 2019 and 2020 and the return of revenue requirement related to the former facilities.
- Gain on sale of former facilities consist of the after tax gain related to the sale of the former facilities.
- Other Post-employment Benefits deferral account ['OPEB deferral account'] was authorized by the OEB in 2011 to record the adjustment to employee future benefits other than pension relating to the cumulative actuarial gains or losses. This account is adjusted annually to record any changes in the cumulative actuarial gains or losses. No

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(a) Regulation [continued]

interest charges are recorded on this account as instructed by the OEB.

Other Post-employment Benefits cash versus accrual account ['OPEB cash vs accrual] tracks the interest on the
differential of the Company's contributions to OPEB versus the accrued OPEB expense recorded in the statement
of income.

Other variances and deferred costs include the following:

- the difference between low voltage charges paid to Hydro One Networks Inc. ['HONI'] and those charged to customers.
- the difference between actual amount of gain/loss from disposal of fixed assets and the forecasted gain/loss.
- the difference between the 2014 starting point and current year ending point stretch factor as multiplied by the rate
 year plan revenue requirement for the relevant rate year, referred to as the Efficiency Adjustment Mechanism
 ['EAM'].

The Company accrues interest on the regulatory balances as directed by the OEB.

The Company continues to assess the likelihood of recovery of all regulatory debit balances subject to recovery through a future rate filing. The absence of OEB approval is a consideration in this evaluation. If the requirement for a provision becomes more likely than not, the Company will recognize the provision in operating costs for the year.

(b) Revenue recognition

Depending on whether certain criteria are met the Company recognizes revenue from contracts with customers when it transfers control over a product or service to a customer either over time or at a point in time. For revenue from other sources, the Company recognizes revenue over time taking into consideration the facts and circumstances of the arrangement.

Revenue is measured at the consideration received or receivable, excluding sales taxes and other amounts collected on behalf of third parties in the following revenue arrangements.

i. Power recovery

Power recovery revenue represents the flow-through of the cost of power to the consumer as purchased by the Company and is recognized over time as electricity is delivered to the customer, as measured by meter readings or usage estimates. Power recovery revenue is regulated by the OEB and includes charges to customers for the electricity commodity, the transmission of electricity and the administration of the wholesale electricity system. The Company has determined that it acts as a principal in this revenue arrangement and therefore has presented it on a gross basis.

ii. Distribution

The Company charges customers for the delivery of electricity, based on rates established by the OEB. The rates are intended to allow the Company to recover its prudently incurred costs and earn a fair return on invested capital. Distribution revenue is recognized over time as electricity is delivered to the customer, as measured by meter readings or usage estimates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3

Page 16 of 41

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(b) Revenue recognition [continued]

Other iii.

Other revenue comprises revenue earned under contracts for service work related to distribution operations, pole attachment and duct rentals, capital contributions received from customers amortized to revenue, and other accountrelated charges such as account set-up and late payment fees. Revenue earned under contracts for service work related to distribution operations is recognized over time as the corresponding costs are recognized proportionately with the degree of completion of the services under contract. Losses on such contracts are fully recognized when they become evident. In certain situations, capital contributions are required from customers to finance additions to property, plant and equipment when the estimated revenue resulting from the addition to property, plant and equipment is less than the cost of providing the service or where special equipment is needed to supply the customers' specific requirements. Since the contributions will provide current and future customers with ongoing access to the supply of electricity, these contributions are classified as deferred revenue and amortized into revenue on a straight-line basis over time [the period a customer will receive services], which is typically equivalent to the rate used for the depreciation of the related property, plant and equipment [service life of the related assets]. All other revenues are recognized over time as services are rendered, except for revenue from certain account-related charges, which is recognized at a point in time.

Capital contributions received from developers to construct or acquire property, plant and equipment for the purpose of connecting future customers to the Company's distribution network are considered out of scope of IFRS 15. Capital contributions received from developers are recognized as deferred revenue and amortized into revenue from other sources at an equivalent rate to that used for the depreciation of the related property, plant and equipment.

Revenue from investment property is considered out of scope of IFRS 15, and accordingly classified as revenue from other sources. Rental income from investment property is recognized as revenue on a straight-line basis over the term of the lease.

Government grant income (c)

CDM income stems from the delivery of provincial government programs that promote conservation. Government grants under CDM programs are recognized when there is reasonable assurance that the grant will be received and all related conditions have been met. Grants under full cost recovery funding are recognized as income on a systematic basis over the period to match the costs they are intended to compensate. CDM performance incentives are recognized when it is probable that future economic benefits will flow to the Company, and the amount can be measured reliably. On March 21, 2019, the Ministry of Ontario announced that the CDM program is to be phased out before the end of 2021.

(d) Interest income and financing costs

Interest income is recognized as it accrues under the effective interest method and comprises interest earned on cash.

Financing costs are calculated using the effective interest rate method and are recognized as an expense unless they are capitalized as part of the cost of a qualifying asset.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 3
Schedule 1
Attachment C
UPDATED
May 5, 2020
Page 17 of 41

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(e) Income taxes

The Company is considered to be a Municipal Electric Utility ['MEU'] and is required to make payments in lieu of corporate income taxes [PILS] as contained in the *Electricity Act, 1998*, as all of its share capital is indirectly owned by the City of Ottawa and not more than 10% of its income is derived from activities carried on outside the municipal boundaries of the City of Ottawa. The *Electricity Act, 1998* provides that a MEU that is exempt from tax under the *Income Tax Act* (Canada) ['ITA'] and the *Taxation Act*, Ontario ['TAO'] is required to make, for each taxation year, a PILs payment to the Ontario Electricity Financial Corporation in an amount equal to the tax that it would be liable to pay under the ITA and the TAO if it were not exempt from tax.

The Company follows the liability method for recording income taxes. Under the liability method, current income taxes payable are recorded based on taxable income. Deferred income taxes arising from temporary differences in the accounting and tax basis of assets and liabilities are provided based on substantively enacted tax rates that will be in effect when the differences are expected to reverse.

The Company recognizes regulatory balances for the amounts of future income taxes expected to be refunded to or recovered from customers in future electricity rates as prescribed by the OEB.

(f) Financial instruments

Financial instruments are initially measured at the fair value of the consideration given or received plus transaction costs that are directly attributable to the acquisition or issue of the financial instrument.

The Company's financial assets, upon initial recognition, are classified as amortized cost or fair value [whereby subsequent changes in fair value are recognized either through OCI ['FVOCI'] or through profit and loss ['FVTPL'] as unrealized market adjustments]. Financial assets are classified based on the Company's business model for managing such assets and the contractual terms of the related cash flows.

The Company's financial liabilities, upon initial recognition, are classified as amortized cost or FVTPL. A financial liability is classified as FVTPL if it is classified as held-for-trading, it is a derivative or it is designated as such on initial recognition.

The Company classifies and subsequently measures its financial instruments as follows:

- Cash and accounts receivable are financial assets classified and measured at amortized cost using the effective interest method, less any impairment if applicable.
- Bank indebtedness, accounts payable and accrued liabilities, customer deposits and notes payable are financial liabilities classified and measured at amortized cost using the effective interest rate method.

The fair value of a financial instrument is the amount of consideration that would be agreed upon in an arm's-length transaction between willing parties. The Company's own credit risk and the credit risk of the counterparty are taken into account in determining the fair value of financial assets and liabilities. Financial instruments are classified using a three-level hierarchy. The levels reflect the inputs used to measure the fair values of financial assets and financial liabilities, and are as follows:

- Level 1: inputs are unadjusted quoted prices of identical instruments in active markets;
- Level 2: inputs other than quoted prices included in Level 1 that are observable for the asset or liability, either directly or indirectly; and
- Level 3: inputs for the liabilities that are not based on observable market data [unobservable inputs].

All financial assets except for those classified as FVTPL or FVOCI are subject to review for impairment at least at each reporting date. Impairment losses, if any, are recognized in net income. An impairment loss is reversed if the reversal can be related objectively to an event occurring after the impairment loss was recognized.

The Company recognizes loss allowances for expected credit losses ['ECL's] on financial assets measured at amortized cost. The Company measures loss allowances for electricity receivables, unbilled receivables relating to electricity and trade

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(f) Financial instruments [continued]

receivables via a simplified approach as permitted by IFRS 9, at an amount equal to lifetime ECL.

When determining whether the credit risk of a financial asset has increased, the Company performs a quantitative and qualitative analysis based on the Company's historical experience and forward-looking information. The Company assumes that the credit risk on a financial asset has increased significantly if it is more than 30 days past due. The Company considers a financial asset to be in default when the borrower is unlikely to pay its credit obligations to the Company in full, without recourse by the Company to actions such as realizing security.

Loss allowances for financial assets measured at amortized cost are deducted from the gross carrying amount of the assets. The gross carrying amount of a financial asset is written off to the extent that there is no realistic prospect of recovery.

(g) Property, plant and equipment

Property, plant and equipment consist principally of electricity distribution infrastructure, buildings and fixtures, land, rolling stock, furniture and equipment, and assets under construction.

Emergency capital spare parts that are expected to be used for more than one year, are considered to be assets under construction and are depreciated only once they are put into service.

Property, plant and equipment are measured at cost less accumulated depreciation and accumulated impairment losses, if any. Self-constructed asset costs comprise all directly attributable expenditures to bring the asset into operation including labour, materials, employee benefits, transportation, contracted services and borrowing costs. Where parts of an item in property, plant and equipment are significant and have different estimated economic useful lives, they are accounted for as separate items [major components] of property, plant and equipment. Certain assets may be acquired or constructed with financial assistance in the form of contributions from customers. Contributions from customers are treated as deferred revenue.

The cost of major inspections and maintenance is recognized in the carrying value of an asset provided that the Company will derive future economic benefits from the expenditure. The carrying amount of a replaced part is derecognized. The costs of day-to-day servicing, repairs, and maintenance, are expensed as incurred.

Depreciation is recorded on a straight-line basis over the estimated service life of each component of property, plant and equipment.

Gains and losses on disposal of retired, sold or otherwise derecognized property, plant and equipment are recognized in income and are calculated as the difference between net proceeds from disposal and the carrying amount of the asset.

The estimated useful lives, residual values and depreciation methods are reviewed at each year-end with the effect of any changes in estimate being accounted for on a prospective basis.

Estimated service lives for property, plant and equipment classes are as follows:

Land and buildings

Land Indefinite
Buildings and fixtures 10 to 75 years

Distribution assets 10 to 60 years

Equipment and other

Furniture and equipment 5 to 40 years Rolling stock 7 to 15 years

May 5, 2020

Page 19 of 41

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(g) Property, plant and equipment [continued]

Assets under construction and land are not subject to depreciation. Borrowing costs are capitalized as a component of the cost of self-constructed property, plant and equipment assets that take a substantial period of time to get ready for their intended use. The capitalization rate is the Company's weighted average cost of borrowing.

(h) Intangible assets

Intangible assets include land rights, capital contributions, computer software and assets under development.

Intangible assets with finite lives are measured at cost less accumulated amortization and accumulated impairment losses, if any. Intangible assets are amortized on a straight-line basis over the estimated service lives of the related assets.

Intangible assets are derecognized on disposal or when no further future economic benefits are expected from their use. Gains or losses on disposal of intangible assets are recognized in income and are calculated as the difference between net proceeds from disposal and the carrying amount of the asset.

The estimated useful lives and amortization methods are reviewed at each year-end with the effect of any changes in estimate being accounted for on a prospective basis.

Estimated service lives for intangible assets with finite lives are as follows:

Land rights 50 years
Computer software 5 to 13 years
Capital contributions 45 years

Borrowing costs are capitalized as a component of cost of self-constructed intangible assets that take a substantial period of time to get ready for their intended use. The capitalization rate is the Company's weighted average cost of borrowing.

(i) Investment properties

Investment property is land and/or buildings held for purposes other than for use in the Company's operating activities. The Company holds investment property either for potential expansion of the service delivery network or as excess administrative property. Investment properties are measured at cost plus transaction costs, and have estimated service lives ranging between 25 and 50 years. Any gain or loss arising from the sale of an investment property is immediately recognized in income.

(j) Impairment of non-financial assets

At the end of each reporting period, or earlier if required, management uses its judgment to assess whether there is an indication that the carrying amount of a non-financial asset [or cash generating unit, 'CGU'] exceeds its recoverable amount. A CGU is the smallest identifiable group of assets that generates cash inflows that are largely independent of the cash inflows from other assets or groups of assets. This assessment involves the consideration of whether any events or changes in circumstances could have affected the recoverability of the carrying amount of a non-financial asset or CGU. Management considers various indicators including, but not limited to, adverse changes in the industry or economic conditions, changes in the degree or method of use of an asset, a lower than expected economic performance of an asset or a significant change in market returns or interest rates. If any indication exists, the Company estimates the asset's recoverable amount, which is the higher of an asset or CGU's fair value less costs of disposal and its value in use. If the carrying value of a non-financial asset exceeds its recoverable amount, the difference is immediately recognized as an impairment loss in profit or loss.

Intangible assets not yet available for use are tested for impairment [within their respective CGUs] at least annually, and whenever there is an indication that the asset may be impaired.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 3
Schedule 1
Attachment C
UPDATED
May 5, 2020
Page 20 of 41

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(j) Impairment of non-financial assets [continued]

When determining the recoverable amount, the Company determines its value-in-use by discounting estimated future cash flows to their present value using a discount rate that reflects changes in the time value of money and the risks specific to the asset or the CGU. The discount rate estimated and used by management represents the weighted average cost of capital determined for the CGU being tested.

At the end of a reporting period, if there is any indication that an impairment loss recognized in a prior period no longer exists or has decreased, the loss is reversed up to its recoverable amount. The carrying amount following the reversal must not be higher than the carrying amount that would have prevailed [net of amortization] had the original impairment not been recognized in prior periods.

(k) Employee future benefits

i. Pension plan

The Company provides pension benefits for its employees through the Ontario Municipal Employees Retirement System ['OMERS'] Fund [the 'Fund']. OMERS is a multi-employer pension plan that provides pensions for employees of Ontario municipalities, local boards, public utilities and school boards. The Fund is a defined benefit pension plan, which is financed by equal contributions from participating employers and employees and by the investment earnings of the Fund.

Although the plan is a defined benefit plan, sufficient information is not available to the Company to account for it as such because it is not possible to attribute the fund assets and liabilities between the various employers who contribute to the Fund. As a result, the Company accounts for the plan as a defined contribution plan, and contributions payable as a result of employee service are expensed as incurred as part of operating costs. The Company shares in the actuarial risks of the other participating entities in the plan, and its future contributions may therefore be increased due to actuarial losses relating to the other participating entities. In addition, the Company's contributions could be increased if other entities withdraw from the plan.

ii. Other post-employment benefits

Employee future benefits other than pensions provided by the Company include life insurance and a retirement grant. These plans provide benefits to certain employees when they are no longer providing active service.

Employee future benefits expense is recognized in the period during which the employees render services.

Employee future benefits are recorded on an accrual basis. The accrued benefit obligation and current service costs are calculated using the projected benefit method prorated on service and based on assumptions that reflect management's best estimates. The current service cost for a period is equal to the actuarial present value of benefits attributed to employees' services rendered in the period. Actuarial gains and losses resulting from experience different from that assumed or from changes in actuarial assumptions are recognized in OCI. However, for the Company, these amounts are reclassified to a regulatory debit balance as prescribed by the OEB.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 3
Schedule 1
Attachment C
UPDATED
May 5, 2020
Page 21 of 41

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(k) Employee future benefits [continued]

iii. Employee benefits

The Company provides short-term employee benefits, such as: salaries, employment insurance, short-term compensated absences, health and dental care. These benefits are recognized as the related service is rendered and is measured on an undiscounted basis. Short-term employee benefits are recognized as an expense unless they qualify for capitalization as part of the cost of an item of materials and supplies, property, plant and equipment, intangible assets. A liability is recognized in respect of any unpaid short-term employee benefits for services rendered in the reporting period.

The Company recognizes a liability for the expected cost of accumulated non-vested sick leave benefits at the end of the reporting period. The Company presents its non-vested sick leave obligation as a non-current liability since it does not expect to settle all of it sick leave benefits within twelve months.

(I) Customer deposits

Customer deposits are cash collections from customers to guarantee the payment of energy bills and fulfillment of construction obligations. Customer deposits from customers to guarantee the payment of energy bills includes related interest amounts owed to the customers. Deposits estimated to be refundable to customers within the next fiscal year are classified as current liabilities and included in accounts payable and accrued liabilities.

(m) Provisions and contingencies

The Company recognizes provisions when there is a present legal or constructive obligation as a result of a past event, it is probable that an outflow of economic benefits will be required to settle the obligation, and a reliable estimate can be made of the amount of the obligation. If the effect is material, provisions are determined by discounting the expected future cash flows at a pre-tax rate that reflects current market assessments of the time value of money and, where appropriate, the risks specific to the liability. Provisions are remeasured at each balance sheet date.

The evaluation of the likelihood of the contingent events requires judgment by management as to the probability of exposure to potential loss. Actual results could differ from these estimates.

A contingent asset is not recognized in the financial statements. However, a contingent asset is disclosed where an inflow of economic benefits is probable.

(n) Leases

Effective January 1, 2019, the Company has adopted IFRS 16 – *Leases* ['IFRS 16'] as described in Note 4 of these financial statements.

At the inception of a contract, the Company assesses whether the contract is, or contains, a lease based on whether the contract conveys the right to control the use of an identified asset for a period of time, in exchange for consideration.

As a lessee

As a lessee, leases are recognized as right-of-use ['ROU'] assets and a lease liability at the lease commencement date. ROU assets are initially measured at cost, and subsequently carried at cost less accumulated depreciation and impairments, if any. The initial cost of an ROU asset equals the amount of the initial measurement of the corresponding lease liability, plus any initial direct costs incurred to bring the assets into operation. ROU assets are classified within property, plant and equipment in these financial statements.

Lease liabilities are initially measured at the present value of lease payments that are not paid at the commencement

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited
EB-2019-0261
Exhibit 1
Tab 3
Schedule 1
Attachment C
UPDATED
May 5, 2020
Page 22 of 41

3. SIGNIFICANT ACCOUNTING POLICIES [CONTINUED]

(n) Leases [continued]

i. As a lessee [continued]

date. The lease payments are discounted using the rate implicit in the lease or, if that rate cannot be readily determined, the Company's incremental borrowing rate which reflects the Company's ability to borrow money over a similar term, for an asset of similar value to the underlying asset, similar security or in a similar economic environment. Variable lease payments that do not depend on an index or rate are not included in the measurement of the lease liability.

Lease liabilities are subsequently measured at amortized cost using the effective interest method. It is remeasured when there is a change in future lease payments arising from a change in an index or rate, if there is a change in the Company's estimate of the amount expected to be payable under a residual value guarantee, or if the Company changes its assessment of whether it will exercise a purchase, extension or termination option.

When a lease liability is remeasured in this way, a corresponding adjustment is made to the carrying amount of the ROU asset, or is recorded in profit or loss if the carrying amount of the ROU asset has been reduced to zero. Payments under lease liabilities are apportioned between interest expense and a reduction of the outstanding lease liability.

Where the Company is reasonably certain it will obtain ownership of the ROU asset before the end of the lease term, the asset is depreciated over its useful life on a straight-line basis. Otherwise, depreciation is calculated over the shorter period of the lease term and the asset's useful life. The lease term includes periods covered by an option to extend if the Company is reasonably certain to exercise that option.

Payments related to short-term [12 months or less] and low value leases are recognized as operating expenses over the lease term in the statement of income.

ii. As a lessor

The Company enters into lease agreements as a lessor with respect to certain investment properties. The terms of these lease arrangements do not transfer substantially all the risks and rewards of ownership to the lessee, and therefore have been classified as operating leases. Rental income from operating leases is recognised on a straight-line basis over the term of the applicable lease.

4. NEW ACCOUNTING PRONOUNCEMENTS

On January 1, 2019, the Company adopted IFRS 16 – *Leases* ['IFRS 16'] using the modified retrospective approach, which does not require restatement of prior period financial information, as it recognizes the cumulative impact on the opening balance sheet and applies the standard prospectively. Accordingly, the comparative information continues to be reported under International Accounting Standard 17 – *Leases* ['IAS 17'] and International Financial Reporting Interpretations Committee, Interpretation 4 – *Determining whether an Arrangement contains a Lease* ['IFRIC 4'].

IFRS 16 eliminates the former dual model [on and off balance sheet] and provides greater comparability between companies who lease assets and those who purchase assets with a single on-balance sheet approach. Under IFRS 16, all leases from the lessee's perspective are recognized on the balance sheet, with exemptions for short-term [12 months or less] and low-value leases. Lessor accounting remains substantially unchanged.

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

4. NEW ACCOUNTING PRONOUNCEMENTS [CONTINUED]

On transition to IFRS 16, the Company elected to use a practical expedient permitting the Company to not apply IFRS 16 to contracts that were not previously identified as containing a lease applying IAS 17 and IFRIC 4. The Company applied the definition of a lease under IFRS 16 to contracts entered into or changed on or after January 1, 2019. Additionally, the Company elected to use the practical expedient for short-term [12 months or less] and low-value leases.

The adoption of IFRS 16 by the Company did not result in the recognition of any new ROU assets or lease liabilities.

5. ACCOUNTS RECEIVABLE

	2019	2018
	\$	\$
Receivables from contracts with customers		
Electricity receivable	58,218	59,933
Unbilled receivables related to electricity	78,417	80,180
Other receivables	32,184	15,571
Amounts due from related party [Note 25]	10,380	7,995
Less: loss allowance [Note 17(c)]	(1,981)	(2,368)
	177,218	161,311
Receivables from other sources		
Conservation and demand management	2,472	1,503
	179,690	162,814

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

6. REGULATORY BALANCES

Information about the Company's regulatory balances is as follows:

	Remaining recovery/ reversal [years]	2018 \$	Balances arising in the year \$	Recovery/ reversal \$	Other movements ⁽¹⁾	2019 \$
Regulatory debit balances						
RARA	1	392	125	4	-	521

Net book value					
At December 31, 2018	77,134	871,186	24,905	139,034	1,112,259
At December 31, 2019	136,839	962,963	35,924	46,923	1,182,649

During the year, the Company capitalized borrowing costs of \$2,353 [2018 – \$2,423] to property, plant and equipment. The average annual interest rate for 2019 was 3.4% [2018 – 3.4%].

In 2019, the Company sold two facilities [including land and building] inherited from pre-amalgamation utilities [i.e. prior to October 3, 2000] for total cash proceeds of \$16,000. In addition, on December 20, 2019, the Company sold vacant land to 2725163 Ontario Inc. [a newly formed company under common control by Hydro Ottawa Holding Inc.] for cash proceeds of \$1,827.

During the year, the Company recognized a loss on disposal of property, plant and equipment of \$30 [2018 – gain on disposal of \$256], which includes a gain on sale of vacant land to 2725163 Ontario Inc. of \$1,759.

Net book value					
At December 31, 2018	2,014	31,569	21,420	11,171	66,174
At December 31, 2019	2,387	27,342	32,503	9,490	71,722

The Company is party to various Connection and Cost Recovery Agreements ['Capital contributions'] with Hydro One Networks Inc. ['HONI']. These agreements govern the construction by HONI of new or modified transformer stations for the purpose of serving the Company's customers, including anticipated electricity load growth. All terms and conditions of CCRAs follow the *Transmission System Code* [the 'Code'] issued by the OEB.

After conducting a review of the useful lives of its intangible assets, management determined that the useful life of two key computer software programs needed to be extended to align with the Company's IT replacement strategy. The impact of this change in estimate is a reduction in amortization expense of approximately \$2,200 in the current year.

During the year, the Company capitalized borrowing costs of 278 [2018 - 73] to intangible assets. The average annual interest rate for 2019 was 3.4% [2018 - 3.4%].

During the year, the Company recognized a loss on disposal of intangible assets of \$5 [2018 - \$nil]

Page 28 of 41

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

9. INVESTMENT PROPERTIES

	2019 \$	2018 \$
Net book value, beginning of year	2,338	2,456
Additions	45	-
Depreciation	(124)	(118)
Net book value, end of year	2,259	2,338

The fair value of investment properties is \$5,461, which is based on the latest Municipal Property Assessment Corporation valuation dated May 16, 2019.

10. CREDIT FACILITY

The Company has access to a \$90,000 [December 31, 2018 – \$90,000] revolving demand credit facility and a \$400 [December 31, 2018 – \$400] commercial card facility available from Hydro Ottawa Holding Inc. As at December 31, 2019, the Company has drawn \$26,323 [December 31, 2018 – \$27,673] in bank indebtedness and \$nil [December 31, 2018 – \$47,000] in bankers acceptances against this credit facility. The rate of interest is based on the rate applicable to Hydro Ottawa Holding Inc.'s outstanding bankers' acceptances drawn on that date. Otherwise, the rate of interest is based on the Bank of Canada's 'Bankers Acceptances 1 month' rate.

11. ACCOUNTS PAYABLE AND ACCRUED LIABILITIES

	2019	2018
	\$	\$
Purchased power payable	88,494	74,747
Trade accounts payable and accrued liabilities	30,709	39,298
Customer deposits	18,899	20,057
Customer credit balances	11,739	10,964
Due to related parties [Note 25]	5,227	2,788
	155,068	147,854

In 2019, the Company conducted a true-up calculation in connection with one of its cost recovery agreements with HONI as described in Note 23. As a result, the Company has determined that it is obligated to make up a shortfall and accordingly set-up a provision of \$2,200, which is included in accounts payable and accrued liabilities.

Page 29 of 41

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

12. DEFERRED REVENUE

	2019	2018
	\$	\$
Capital contributions from customers	76,380	61,888
Capital contributions from developers	65,807	53,881
	142,187	115,769

13. EMPLOYEE FUTURE BENEFITS

(a) Pension plans

The Company's participating employer contributions under OMERS for the year ended December 31, 2019 amounted to \$5,721 [2018 – \$5,905].

(b) Other employee future benefits

Employee future benefits are calculated using an annual compensation rate increase of 2.0% [2018 – 2.0%] and a discount rate of 3.1% [2018 – 3.9%] to calculate the liabilities. The valuations also include several other economic and demographic assumptions including mortality rates. The mortality assumption is based on the *Canadian Pensioners' Mortality* report published by the Canadian Institute of Actuaries in February 2014.

Information about the Company's employee future benefits other than pension plans is as follows:

	2019 \$	2018 \$
Defined benefit obligation, beginning of year	12,367	13,334
Current service costs	305	338
Past service costs	70	-
Interest on accrued benefit obligation	857	398
Benefit payments	(717)	(649)
Actuarial loss (gain)	1,522	(1,054)
Defined benefit obligation, end of year	14,404	12,367

An actuarial valuation was performed as at December 31, 2019. As a result of this exercise, the Company increased the accumulated liability by \$2,037 [December 31, 2018 – decreased by \$967 based on an actuarial extrapolation].

Significant changes in actuarial assumptions related to discount rates, future health and dental costs, mortality rates and retirement age may affect the valuation of the defined benefit obligation.

Page 30 of 41

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

14. NOTES PAYABLE

The Company currently has the following promissory notes and grid promissory notes payable to Hydro Ottawa Holding Inc.:

	2019	2018
	\$	\$
4.97% promissory note, due December 19, 2036	50,000	50,000
4.14% for the first five years [3.99% thereafter] promissory note, issued May 14, 2013 and due May 14, 2043	107,185	107,185
2.72% for the first five years [2.61% thereafter] promissory note, issued February 9, 2015 and due February 3, 2025	138,667	138,667
3.77% for the first five years [3.64% thereafter] promissory note, issued February 9, 2015 and due February 2, 2045	121,333	121,333
2.72% for the first five years [2.61% thereafter] promissory note, issued June 25, 2015 and due June 25, 2025	15,999	15,999
3.77% for the first five years [3.64% thereafter] promissory note, issued June 25, 2015 and due June 25, 2045	14,001	14,001
2.66% promissory note, due October 16, 2029	87,500	-
3.21% promissory note, due October 16, 2049	162,500	-
3.72% grid promissory note, due on demand, repaid during the year	-	60,000
4.12% grid promissory note, due on demand, repaid during the year	-	60,000
4.41% grid promissory note, due on demand, repaid during the year	-	30,000
	697,185	597,185

On October 17, 2019, the Company repaid all outstanding advances on the grid promissory note to Hydro Ottawa Holding Inc. It then issued two new promissory notes on the same date in the amount of \$87,500 [10-year] and \$162,500 [30-year] to Hydro Ottawa Holding Inc.

The grid promissory note facility bears fixed-rate interest based on the cost of long-term debt for Ontario's Regulated Utilities in accordance with the OEB's cost of capital calculations.

15. CAPITAL DISCLOSURES

The Company's main objectives when managing capital are to:

- Ensure continued access to funding to maintain and improve the operations and infrastructure of the Company;
- Ensure compliance with covenants related to the credit facilities and senior unsecured debentures entered into by its parent company, Hydro Ottawa Holding Inc.; and
- Align Hydro Ottawa Limited's capital structure with the debt to equity structure recommended by the OEB.

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

15. CAPITAL DISCLOSURES [CONTINUED]

The Company's capital consists of the following:

	2019 \$	2018 \$
Bank indebtedness	26,323	27,673
Notes payable	697,185	597,185
Total debt	723,508	624,858
Shareholder's equity	380,318	360,918
Total capital	1,103,826	985,776
Debt capitalization ratio	65.55 %	63.39 %

The Company is in compliance with all financial covenants and limitations associated with its credit facilities and its long-term debt.

The Company is deemed by the OEB to have a capital structure that is funded by 56% long-term debt, 4% short-term debt and 40% equity. The OEB uses this deemed structure only as a basis for setting distribution rates. As such, the Company's actual capital structure may differ from the OEB deemed structure.

The Company met its capital management objectives, which have not changed during the year.

16. SHARE CAPITAL

(a) Authorized

Unlimited number of voting first preferred shares, redeemable at one dollar per share

Unlimited number of non-voting second preferred shares, redeemable at ten dollars per share

Unlimited number of non-voting third preferred shares, redeemable at one hundred dollars per share

Unlimited number of voting fourth preferred shares [ten votes per share], redeemable at one hundred dollars per share

Unlimited number of voting Class A common shares

Unlimited number of non-voting Class B common shares

Unlimited number of non-voting Class C common shares, redeemable at the price at which such shares are issued

The above shares are without nominal or par value.

Holders of second preferred shares, fourth preferred shares and common shares are entitled to receive dividends as and when declared by the Board of Directors at their discretion.

Exhibit 1 Tab 3 Schedule 1 Attachment C **UPDATED**

Hydro Ottawa Limited

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

16. SHARE CAPITAL [CONTINUED]

(b) Issued

2019	2018
\$	\$
154,789,001 Class A common shares 167,081	167,081

Any invitation to the public to subscribe for shares of the Company is prohibited by shareholder resolution.

On April 16, 2019, the Board of Directors declared a \$12,300 dividend on the common shares of the Company outstanding on December 31, 2018. The dividend was paid to the sole shareholder, Hydro Ottawa Holding Inc. on April 23, 2019 [2018 – April 19, 2018, the Board of Directors declared a \$11,900 dividend which was paid on April 26, 2018].

On September 23, 2019, the Board of Directors declared a \$6,000 dividend on the common shares of the Company outstanding on June 30, 2019. The dividend was paid to the sole shareholder, Hydro Ottawa Holding Inc. on September 30, 2019.

17. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT

(a) Fair value disclosures

The carrying values of the Company's financial instruments, except for notes payable, approximates fair value because of the short maturity and nature of the instruments. The fair value measurement of the financial instrument for which the fair value has been disclosed is included in Level 2 of the fair value hierarchy [Note 3(f)].

The Company has estimated the fair value of the notes payable as at December 31, 2019 as amounting to \$754,161 [December 31, 2018 - \$600,195]. The fair value has been determined based on discounting all future payments of interest and the principal repayment on January 1, 2020, at the estimated interest rate of 2.9% [2018 - 3.7%] that would be available to the Company on December 31, 2019.

(b) **Market risk**

The Company is exposed to market risk, which is the risk that the fair value of future cash flows of a financial instrument will fluctuate because of changes in market prices. Market prices are comprised of three types of risks: interest rate risk, foreign exchange risk and commodity price risk.

(i) Interest rate risk

The Company is exposed to interest rate risk on its borrowings. The Company mitigates exposure to interest rate risk by fixing interest rates on its notes payable with its parent company. Under Hydro Ottawa Holding Inc.'s credit facilities, any advances on its operating line would expose the Company to fluctuations in short term interest rates related to prime rate loans and bankers' acceptances as all short-term financing requirements are obtained through its parent company, which passes on its borrowing costs. The interest rate risk is deemed to be low due to the immaterial cost of its short-term borrowings. For the most part, the borrowing requirements are for a very short duration as the advances serve to bridge gaps between the cash outflow related to the monthly power bill and the inflows related to the settlements with customers and, as such, there is very limited exposure to interest rate risk.

A sensitivity analysis was conducted to examine the impact of a change in the prime rate on the Company's advances from Hydro Ottawa Holding Inc. A variation of 1% [100 basis points], with all other variables held constant, would increase or decrease the annual interest expense by approximately \$446.

May 5, 2020

Page 33 of 41

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

17. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT [CONTINUED]

(b) Market risk [continued]

The Company is also exposed to fluctuations in interest rates as its regulated rate of return is derived using a complex formulaic approach which is in part based on the forecast for long-term Government of Canada bond yields. This rate of return is approved by the OEB as part of the approval of distribution rates.

(ii) Foreign exchange risk

As at December 31, 2019, the Company has limited exposure to fluctuations in foreign currency exchange rates. The Company does purchase a small proportion of goods and services that are denominated in foreign currencies, predominately the US dollar. The impact of the fluctuation of foreign currencies on the gains or losses of accounts payable denoted in foreign currencies is not material.

(iii) Commodity price risk

The Company does not have commodity price risk due to the flow-through nature of power purchases.

(c) Credit risk

Credit risk is the risk that a counterparty will default on its obligations, causing a financial loss to the Company. Concentration of credit risk associated with accounts receivable is limited due to the large number of customers the Company services. The Company has approximately 340,000 customers, the majority of which are residential. As a result, the Company did not earn a significant amount of revenue and does not have a significant receivable from any individual customer.

The Company performs ongoing credit evaluations of its customers and requires collateral to support non-residential customer accounts receivable on specific accounts to mitigate significant losses in accordance with OEB legislation. As at December 31, 2019, the Company held security deposits related to power recovery and distribution sales in the amount of \$14,713 [December 31, 2018 – \$16,009] with respect to these customers.

The Company monitors and limits its exposure to credit risk on a continuous basis.

The Company applies the IFRS 9 simplified approach to measuring expected credit losses which uses a lifetime expected loss allowance for all trade and other receivables. The expected loss rates for trade receivables are based on the payment profiles of sales over a period of 12 months before December 31, 2019 or December 31, 2018 respectively and the corresponding historical credit losses experienced within this period and other information. The historical loss rates are adjusted to reflect current and forward-looking information on macroeconomic factors affecting the ability of the customers to settle the receivables.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

17. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT [CONTINUED]

(c) Credit risk [continued]

On that basis, the loss allowance as at December 31, 2019 and December 31, 2018 was determined as follows for trade and other receivables.

	Gross carrying amount	Weighted average loss rate	Loss allowance	Net carrying amount
	\$		\$	\$
December 31, 2019				
Outstanding for 30 days or less	93,502	0.00 %	-	93,502
Outstanding for more than 30 days but not more than 120 days	7,360	6.89 %	507	6,853
Outstanding for more than 120 days	2,392	56.06 %	1,341	1,051
Unbilled receivables related to electricity	78,417	0.17 %	133	78,284
	181,671		1,981	179,690
December 31, 2018				
Outstanding for 30 days or less	73,286	0.00 %	-	73,286
Outstanding for more than 30 days but not more than 120 days	7,585	9.70 %	736	6,849
Outstanding for more than 120 days	4,131	35.85 %	1,481	2,650
Unbilled receivables related to electricity	80,180	0.19 %	151	80,029
	165,182		2,368	162,814

The following table reconciles the opening and closing loss allowance for trade and other receivables:

2019	2018
\$	\$
2,368	2,371
887	1,694
(1,496)	(2,023)
222	326
1,981	2,368
	\$ 2,368 887 (1,496) 222

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

17. FINANCIAL INSTRUMENTS AND RISK MANAGEMENT [CONTINUED]

(c) Credit risk [continued]

Impairment losses on trade and other receivables are presented as net impairment losses within the statement of income. When a receivable is deemed to be uncollectible, it is written off and the expected loss allowance is adjusted accordingly. Subsequent recoveries of receivables previously provisioned or written off result in a reduction of impairment losses included in operating costs in the statement of income.

As at December 31, 2019, there were no significant concentrations of credit risk with respect to any class of financial assets or counterparties and the Company's maximum exposure to credit risk is equal to the carrying value of accounts receivable less customer deposits held.

(d) Liquidity risk

Liquidity risk is the risk that the Company will not meet its financial obligations as they come due. The Company's parent, Hydro Ottawa Holding Inc., manages all the financing and investing activities for the Company. The Company has access to credit facilities with Hydro Ottawa Holding Inc. [Note 10]. These credit facilities are available to the Company to help meet its financial obligations as they come due.

Liquidity risks associated with financial commitments are as follow:

		2019	
	Due within one year	Due between one and five years	Due after five
	\$	\$	\$
Bank indebtedness	26,323	-	-
Accounts payable and accrued liabilities	153,062	-	-
Notes payable			
4.97% promissory note, due December 19, 2036	-	-	50,000
4.14% for the first five years [3.99% thereafter] promissory note, due May 14, 2043	_	-	107,185

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

18. REVENUE FROM CONTRACTS WITH CUSTOMERS AND OTHER SOURCES

The Company's revenue breakdown is as follows:

	2019	2018
	\$	\$
Revenue from contracts with customers		
Power recovery and distribution		
Residential service (1)	357,161	339,947
General service (2)	658,205	628,599
Large users (3)	72,879	69,887
Other		
Service work related to distribution operations	9,854	6,510
Pole attachment and duct rentals	4,454	4,440
Capital contributions from customers amortized to revenue	2,048	1,555
Account-related charges	3,048	3,303
Shared service agreements and miscellaneous	4,049	4,005
	1,111,698	1,058,246
Revenue from other sources		
Other		
Investment property rentals	820	904
Capital contributions from developers amortized to revenue	1,719	1,395
	1,114,237	1,060,545

⁽¹⁾ Residential service means a service that is for domestic or household purposes, including single family or individually metered multifamily units and seasonal occupancy.

⁽²⁾ General service means a service supplied to premises other than those receiving Residential Service and Large Users and typically includes small businesses and bulk-metered multi-unit residential establishments. This service is provided to customers with a monthly peak demand of less than 5,000 kW averaged over a twelve-month period.

⁽³⁾ Large users means a service provided to a customer with a monthly peak demand of 5,000 kW or greater averaged over a twelve-month period.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

19. OPERATING COSTS

	2019	2018
	\$	\$
Salaries, wages and benefits	74,856	77,285
Contracted services - distribution system maintenance	11,300	10,828
Contracted services - customer owned plant	15,669	19,340
Other electricity distribution costs	9,570	8,331
Other general and administrative expenses	30,797	31,728
Loss (gain) on disposals of property, plant and equipment	35	(256)
Capital recovery	(30,637)	(31,488)
	111,590	115,768

20. FINANCING COSTS

	2019 \$	2018 \$
Long-term interest	22,732	21,374
Short-term interest and fees	2,102	881
Less: capitalized borrowing costs	(2,631)	(2,496)
	22,203	19,759

21. INCOME TAXES

Income tax expense recognized in net income comprises the following:

	2019 \$	2018 \$
Current tax expense		
Current income tax expense	1,311	4,689
Deferred tax expense		
Origination and reversal of temporary differences	12,802	8,629
Income tax expense recognized in net income	14,113	13,318

Income tax expense recognized in other comprehensive income comprises the following:

	2019	2018
	\$	\$
Income tax effect of actuarial (loss) gain on defined benefit obligations	(549)	380

Hydro Ottawa Limited

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars]

21. INCOME TAXES [CONTINUED]

The provision for income taxes differs from the amount that would have been recorded using the combined Canadian federal and Ontario statutory income tax rates. A reconciliation between the statutory and effective tax rates is provided as follows:

	2019	2018
	\$	\$
Federal and Ontario statutory income tax rate	26.50 %	26.50 %
Income before income taxes	51,813	50,477
Income taxes at statutory rate	13,730	13,376
Increase (decrease) in income taxes resulting from:		
Permanent differences	(62)	48
Other	445	(106)
	14,113	13,318
Effective income tax rate	27.24 %	26.38 %

The Company, as a rate-regulated enterprise, can recognize deferred income tax assets and liabilities and related regulatory balances for the amount of deferred income taxes expected to be refunded to, or recovered from, customers in future electricity rates.

Significant components of the Company's deferred income liability are as follows:

	2019	2018
	\$	\$
Property, plant and equipment and intangible assets	(43,874)	(30,602)
Employee future benefits	5,193	4,459
Other temporary differences	622	337
	(38,059)	(25,806)

Movements in the deferred income tax (liability) asset during the year were as follows:

	2019 \$	2018 \$
Deferred tax, beginning of year	(25,806)	(16,797)
Recognized in net income	(12,802)	(8,629)
Recognized in OCI related to employee future benefits	549	(380)
Deferred tax, end of year	(38,059)	(25,806)

The Company's regulatory deferral account debit balance for the amounts of deferred income taxes expected to be refunded/ (collected) to/from customers in future electricity rates is \$38,059 [2018 – \$25,806].

22. CHANGES IN NON-CASH WORKING CAPITAL AND OTHER OPERATING BALANCES

	2019	2018
	\$	\$
Accounts receivable	(16,876)	16,306
Prepaid expenses	(1,737)	(756)
Accounts payable and accrued liabilities	10,957	(2,971)
Net change in accruals related to property, plant and equipment	8,633	2,829
Net change in accruals related to intangible assets	(4,800)	58
Customer deposits in accounts receivable	-	(14,586)
	(3,823)	880

23. CONTINGENT LIABILITIES

Purchasers of electricity in Ontario including the Company, through the Independent Electricity System Operator ['IESO'], are required to provide security to mitigate the risk of their default based on their expected activity in the market. The IESO could draw on these guarantees if the Company fails to make a payment required by a default notice issued by the IESO. A prudential support obligation is calculated based upon a default protection amount and the distributor's trading limit less a reduction for the distributor's credit rating. As at December 31, 2019, the Company had drawn standby letters of credit in the amount of \$10,000 [December 31, 2018 – \$10,000] against its credit facility to cover its prudential support obligation.

The Company participates with other electrical utilities in Ontario in an agreement to exchange reciprocal contracts of indemnity through the Municipal Electrical Association Reciprocal Insurance Exchange. The Company is liable for additional assessments to the extent premiums collected and reserves established are not sufficient to cover the cost of claims and costs incurred. If any additional assessments were required in the future, their cost would be charged to income in the year during which they occur.

The Company is party to connection and cost recovery agreements with HONI as described in Note 8. Each of the Company's CCRAs has a term of 25 years. To the extent that the cost of the project is not recoverable from future transformation connection revenues, the Company is obligated to pay a capital contribution equal to the difference between these revenues and the construction costs allocated to the Company. These agreements require periodic reviews whereby a comparison of actual to forecasted load is conducted, and a true-up calculation performed. When a true-up calculation shows the Company's actual load for the past period and updated load forecast for the future period are lower than the initial load, the Company is obligated to make up this shortfall. When the Company's actual load and updated load forecast are higher than the initial load, the Company is entitled to a rebate. True-up calculations are made in years 5 and 10 and in year 15 if the difference between the actual incremental load and initial load at the end of year 10 is greater than 20%.

Various lawsuits have been filed against the Company for incidents that arose in the ordinary course of business. In the opinion of management, the outcomes of the lawsuits, now pending, are neither determinable nor material. Should any loss result from the resolution of these claims, such losses would be claimed through the Company's insurance carrier, with any unrecoverable amounts charged to income in the year of resolution.

24. COMMITMENTS

The Company has \$122,564 in total open commitments for 2020 to 2026. This includes commitments relating to a call centre service agreement, construction projects, facilities, and overhead and underground services.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3 Schedule 1 Attachment C UPDATED May 5, 2020 Page 40 of 41

25. RELATED PARTY TRANSACTIONS

Transactions with related parties occur in the normal course of business, and are transacted at the amount of consideration determined and agreed to by the related parties. Trade amounts due from and to related parties are non-interest bearing, result from normal operations and are due within one year.

(a) Transactions with ultimate shareholder and its subsidiaries

During the year, the Company earned revenue from the sale of electricity to the City of Ottawa and its subsidiaries, which is billed at prices and terms approved by the OEB, and earned other revenue totaling \$455 [2018 – \$387]. The Company also received \$4,268 [2018 – \$3,580] in contributions relating to the upgrade and/or expansion of the Company's existing electricity distribution infrastructure.

The Company incurred \$2,855 [2018 – \$2,433] in property taxes and \$1,002 [2018 – \$2,711] in conservation and demand management rebate costs, and purchased \$794 [2018 – \$634] in fuel, permits and other services during the year, which is included in operating costs. The Company also incurred \$504 [2018 – \$269] in building permit costs and development charges, which are included in property, plant and equipment.

At December 31, 2019, the Company's accounts receivable and customer deposits include \$8,873 [December 31, 2018 – \$7,473] and \$1,053 [December 31, 2018 – \$652], respectively, while the Company's accounts payable and accrued liabilities include \$125 [December 31, 2018 – \$54] due to the City of Ottawa and its subsidiaries.

(b) Transactions with parent

During the year, the Company earned revenue of \$1,209 [2018 – \$1,242] relating to the provision of administrative and corporate services and interest charges.

The Company incurred \$3,074 [2018 – \$3,315] in operating costs related to the purchase of administrative and corporate support services that includes compensation for certain key management personnel, and \$2,088 [2018 – \$881] in short-term financing costs. The Company also purchased power of \$20 [2018 – \$38].

At December 31, 2019, the Company's accounts payable and accrued liabilities include \$2,291 [December 31, 2018 – \$414] due in respect of the transactions described.

The Company incurred \$22,732 [2018 – \$21,374] in financing costs during the year on its notes payable to Hydro Ottawa Holding Inc. described in Note 14 of these financial statements.

(c) Transactions with other related parties

During the year, the Company earned revenue from the sale of electricity to other related parties, which is billed at prices and terms approved by the OEB, and earned other revenue of \$3,652 [2018 – \$3,012]. The Company also received \$4,019 [2018 – \$691] in contributions relating to the upgrade and/or expansion of the Company's existing electricity distribution infrastructure. During the year, the Company purchased power of \$4,942 [2018 – \$6,566], and incurred \$534 [2018 – \$362] in operating costs.

In 2019, the Company sold vacant land to a related party for cash proceeds of \$1,827, as described in Note 7.

At December 31, 2019, the Company's accounts receivable include \$454 [December 31, 2018 – \$522] due in respect of the transactions above while accounts payable and accrued liabilities include \$2,811 [December 31, 2018 – \$2,320] due to other related parties.

Notes to the Financial Statements Year ended December 31, 2019 [in thousands of Canadian dollars] Hydro Ottawa Limited EB-2019-0261 Exhibit 1 Tab 3 Schedule 1 Attachment C UPDATED May 5, 2020 Page 41 of 41

26. COMPARATIVE FIGURES

In certain instances, the 2018 information presented for comparative purposes has been reclassified to conform to the financial statement presentation adopted for the current year.

27. SUBSEQUENT EVENT

Subsequent to December 31, 2019 the COVID-19 outbreak was declared a pandemic by the World Health Organization. This has resulted in governments worldwide, including the Canadian and Ontario governments, enacting emergency measures to combat the spread of the virus. These measures, which include the implementation of travel bans, self-quarantine periods and social distancing, have caused material disruption to businesses globally and in Ontario resulting in an economic slowdown. Governments and central banks have reacted with significant monetary and fiscal interventions designed to stabilize economic conditions however the success of these interventions is not currently determinable. The current challenging economic climate is having an adverse impact on cash flows, working capital levels and/or debt balances, which may also have a direct impact on the Company's operating results and financial position in the short term, and into the future. The situation is dynamic and the ultimate duration and magnitude of the impact on the economy and the financial effect on our business is not known at this time.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 1 of 19

UPDATED RATE BASE OVERVIEW

2

1

3 1. INTRODUCTION

4 This Schedule provides an overview of Hydro Ottawa's distribution rate base and a discussion 5 of year-over-year variances.

6

- 7 In accordance with the OEB's Chapter 2 Filing Requirements for Electricity Distribution Rate
- 8 Applications, as updated on July 12, 2018 and amended on July 15, 2019, the rate base used to
- 9 determine the revenue requirement for the Test Years should be presented. This Schedule
- 10 provides yearly information on Hydro Ottawa's rate base, including information on forecast net
- 11 fixed assets, calculated on a mid-year average basis, along with working capital allowance
- 12 ("WCA"). Net fixed assets are gross assets in service minus accumulated amortization and
- 13 contributed capital.

14

- 15 The capital expenditure plan for the 2021-2025 period is outlined in UPDATED Exhibit 2-4-1:
- 16 Capital Expenditure Summary, Exhibit 2-4-2: Capital Expenditure Details, and Exhibit 2-4-3:
- 17 Distribution System Plan. Details regarding WCA can be found in UPDATED Exhibit 2-3-1:
- 18 Working Capital Requirement.

19

20 2. SUMMARY OF 2016-2020 APPROVED AND ACTUAL RATE BASE

- 21 Table 1 below shows Hydro Ottawa's approved rate base values for 2016-2020, as per the
- 22 Approved Settlement Agreement governing the utility's 2016-2020 rate term. Table 1 provides
- 23 the opening, closing, and average balances for gross assets and accumulated depreciation. The
- 24 table further provides the closing balance for net fixed assets and Hydro Ottawa's WCA.

25

- 26 Amounts in Table 1 do not include fixed assets related to items that have been removed from
- 27 base rates, and recorded into Regulatory Accounts, as per the Approved Settlement
- 28 Agreement. These items are the following: the utility's new administrative and operations

²⁹ Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 **UPDATED** May 5, 2020 Page 2 of 19

- 1 facilities, as described in **UPDATED** Attachment 2-1-1(A): New Administrative Office and
- 2 Operations Facilities; and Connection Cost Recovery Agreement ("CCRA") payments, as
- 3 described in UPDATED Exhibit 9-1-3: Group 2 Accounts.

6 Summary or Attachment 2-4-3(E): Material Investments. For more information on Capital

7 Additions, please see **UPDATED** Exhibit 2-2-1: Assets - Property, Plant & Equipment Continuity

8 Schedule. In addition, for details related to WCA, please see UPDATED Exhibit 2-3-1: Working

9 Capital Requirement.

11 4.1. 2016 ACTUAL vs. 2016 APPROVED

- Hydro Ottawa's average net fixed assets were \$15.2M higher than the OEB-approved amounts. This was largely due to increases in emergency renewal work related to severe storms, increased spending in the Corrective Renewal Program, and CCRA true-up payments to Hydro One Networks Inc. ("HONI") related to the Hinchey substation.
- An additional \$5.6M in WCA was required in 2016 as a result of higher Power Supply Expenses than estimated, mainly in relation to the commodity and Global Adjustment expense. This was partially offset by a lower Wholesale cost than estimated.

²⁰ ¹⁴ Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 12 of 19

1 4.2. 2017 ACTUAL vs. 2017 APPROVED

- Hydro Ottawa's average net fixed assets for 2017 were \$26.8M higher than approved amounts due, in part, to the previous year's balance and an increase in 2017 in customer-driven demand work related to the following: residential and commercial infills and/or subdivisions; the City of Ottawa's Light Rail Transit project; and unforecasted embedded generation nameplate credit. In addition, a new Human Resources software module was added to the enterprise resource planning system upgrade project, which increased its overall project cost.
- In 2017, \$3.0M less WCA was required mainly as a result of lower Power Supply Expenses than estimated. The larger than estimated Global Adjustment expense was offset by the lower than anticipated Commodity and Wholesale expense.

13 **4.3. 2018 ACTUAL vs. 2018 APPROVED**

- Hydro Ottawa's average net fixed assets for 2018 were \$39.0M higher than approved amounts due, in large part, to the previous year's balance, emergency work from three severe storms (including the September 2018 tornadoes), and a sustained increase in System Access demands, including from museums and large industrial complexes.
- In 2018, \$7.4M less WCA was required as a result of a lower Power Supply Expenses than estimated. With the exception of the Transmission Connection charge, which had a negative variance, all other charges were lower than anticipated or very close to the estimate.

23 **4.4. 2019 BRIDGE YEAR vs. 2019 APPROVED**

As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets for 2019 are set to be \$60.6M higher than approved amounts due, in part, to the previous year's balance and the capitalization of three large substation projects (Merivale DS, Overbrook DS, and Richmond South DS). For more details on these projects, please refer to Exhibit 2-4-3: Distribution System Plan.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 13 of 19

• For 2019, the WCA is set to be mainly in-line with approved amounts, as Hydro Ottawa has maintained the original estimate of Power Supply Expenses from the 2016-2020 rate application for 2019. With the goal of being consistent with the working capital rate used in the Test Years, Hydro Ottawa has used 7.5% as the working capital rate percentage for the 2019 Bridge Year.

6 7

1

2

3

5

8

9

10

11

12 13

2019 ACTUAL vs. 2019 APPROVED

- Accounting for 2019 actuals, Hydro Ottawa's average net fixed assets for 2019 are \$66.6M higher than the 2019 approved. The \$6.0M variance from the 2019 forecast to the 2019 actual net fixed assets is mainly due to the increase in system access in residential subdivisions.
- In 2019, the main driver for \$3.1M less WCA was lower Power Supply Expenses than estimated. When accounting for 2019 actuals, Hydro Ottawa used the OEB-approved 7.55% for the working capital percentage rate for 2019.

20

21

22

23

24

2526

14

16 4.5. 2020 BRIDGE YEAR vs. 2020 APPROVED

- Hydro Ottawa's average net fixed assets for the 2020 Bridge Year is budgeted to be \$65.0M higher than the previously approved amount for 2020, largely as a result of overages in the previous years' balances.
- For 2020, the WCA is mainly in-line with approved amounts, as Hydro Ottawa has maintained the original estimate of Power Supply Expenses from the 2016-2020 rate application for 2020. With the goal of being consistent with the working capital rate used in the Test Years, Hydro Ottawa has used 7.5% as the working capital rate percentage for 2020 in the utility's original Application. To be consistent with the Approved Settlement Agreement, Hydro Ottawa has used the OEB approved 7.52% as the working capital percentage rate for the 2020 Bridge Year.

3 5.1. 2017 ACTUAL vs. 2016 ACTUAL

- Hydro Ottawa's average net fixed assets for 2017 were \$46.7M higher than 2016 due to capital additions in 2017.
- In 2017, WCA was \$7.1M less than 2016 due to a decrease in Power Supply Expenses.

8 5.2. 2018 ACTUAL vs. 2017 ACTUAL

- Hydro Ottawa's average net fixed assets for 2018 were \$52.1M higher than 2017 due to
 capital additions in 2018.
- In 2018, WCA was \$1.2M less compared to 2017. This decrease was the result of lower
 Power Supply Expenses.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 16 of 19

1 5.3. 2019 BRIDGE YEAR vs. 2018 ACTUAL

- As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets
 for 2019 are set to be \$50.0M higher than 2018 due to capital additions in 2019.
 - In 2019, WCA is likewise estimated to be \$1.8M more than 2018 due to an increase in Power Supply Expenses, as submitted in Hydro Ottawa's original Application.

2019 ACTUAL vs. 2018 ACTUAL

- Accounting for 2019 actuals, Hydro Ottawa's average net fixed assets for 2019 were \$56.0M higher than 2018 due to capital additions in 2019.
- In addition, WCA was \$0.8M less than 2018 mainly as a result of a lower approved WCA percentage.

13 **5.4. 2020 BRIDGE YEAR vs. 2019 BRIDGE YEAR**

- As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets for 2020 are budgeted to be \$41.0M higher than 2019 due to capital additions in 2020.
- In 2020, WCA is likewise estimated to increase \$1.6M over 2019 due to anticipated increases in Power Supply Expenses, as submitted in Hydro Ottawa's original Application.

2020 BRIDGE YEAR vs. 2019 ACTUAL

- Hydro Ottawa's average net fixed assets for 2020 are budgeted to be \$48M higher than 2019 actual net fixed assets due to capital additions in 2020.
- In Bridge Year 2020, WCA is estimated to increase \$4.4M over 2019 actuals due to anticipated increases in Power Supply Expenses and Operations, Maintenance and Administration Expenses.

27 5.5. **2021 TEST YEAR vs. 2020 BRIDGE YEAR**

As originally submitted, Hydro Ottawa's average net fixed assets for 2021 are budgeted
 to be \$173.8M higher than 2020 due to capital additions in 2021. Accounting for 2019

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 17 of 19

- actuals, however, the 2021 average net fixed assets are budgeted to be \$171.9M higher than 2020. These include \$50.0M in additions related to Cambrian Municipal Transformer Station ("MTS").¹⁷ In addition, the inclusion of adjustments to rate base of items that were previously held outside base rates (i.e. new facilities and new CCRA for 2016-2020 see section 2 above) is likewise planned, with these assets being added at their net book value in the 2021 Test Year.
 - In 2021, the WCA (as originally submitted) is estimated to increase \$6.2M over 2020 mainly due to increases in Power Supply Expenses. Based on 2019 actuals, the WCA is estimated to increase \$6.9M over 2020. For more information on WCA, please refer to UPDATED Exhibit 2-3-1: Working Capital Requirement.¹⁸

12 **5.6. 2022 TEST YEAR vs. 2021 TEST YEAR**

- As submitted by the utility in its original Application, Hydro Ottawa's average net fixed assets for 2022 are budgeted to be \$79.7M higher than 2021 due to capital additions in 2022. Based on 2019 actual net fixed assets, Hydro Ottawa's average net fixed assets for 2022 are budgeted to be \$79.4M higher than 2021. These additions include \$26.9M related to Cambrian MTS.
 - In 2022, the WCA is estimated to increase \$5.5M over 2021 mainly due to increases in Power Supply Expenses.

21 5.7. 2023 TEST YEAR vs. 2022 TEST YEAR

As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets for 2023 are budgeted to be \$40.3M higher than 2022 due to capital additions in 2023.
 Based on 2019 actual net fixed assets, Hydro Ottawa's average net fixed assets for 2022 are budgeted to be \$42.4M higher than 2021.

28 Years.

10

5 5.8. 2024 TEST YEAR vs. 2023 TEST YEAR

- As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets for 2024 are budgeted to be \$19.7M higher than 2023 due to capital additions in 2024.
 Based on 2019 actual net fixed assets, Hydro Ottawa's average net fixed assets for 2024 are budgeted to be \$19.9M higher than 2023.
- In 2014 2024, the WCA is estimated to increase \$7.4M over 2023 due mainly to increases in Power Supply Expenses.

1112

13 5.9. 2025 TEST YEAR vs. 2024 TEST YEAR

- As submitted in the utility's original Application, Hydro Ottawa's average net fixed assets for 2025 are budgeted to be \$39.3M higher than 2024 due to capital additions in 2025.
 Based on 2019 actual net fixed assets, Hydro Ottawa's average net fixed assets for 2025 are budgeted to be \$39.4M higher than 2024.
 - In 2025, the WCA is estimated to increase \$3.7M over 2024 mainly due to increases in Power Supply Expenses.

21 6. FACILITIES RENEWAL PROGRAM

Appended to this Schedule is UPDATED Attachment 2-1-1(A): New Administrative Office and Operations Facilities, which contains detailed information with respect to Hydro Ottawa's Facilities Renewal Program ("FRP"). This includes the assessment of prudence of the expenditures over \$66.0M, as required in the Approved Settlement Agreement governing the utility's 2016-2020 rate term.

- 28 In UPDATED Attachment 2-1-1(A): New Administrative Office and Operations Facilities, Table
- 29 12 and the revenue requirement for the FRP have been updated. There was a small change in

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 UPDATED May 5, 2020 Page 19 of 19

- 1 the final total cost of the project (under \$1,000). In light of the immateriality of this change, the
- 2 Attachment was not updated to reflect it.

- 4 In addition, appended to this Schedule is a copy of the formal report that was prepared by the
- 5 Fairness Commissioner who was engaged by Hydro Ottawa at the outset of the FRP Request
- 6 for Qualifications process. The Fairness Commissioner ultimately concluded that "the
- 7 procurement process for the Facilities Renewal Program Design Build up to the completion of
- 8 the evaluation process was conducted in a fair, open and transparent manner." Please see
- 9 Attachment 2-1-1(B): Fairness Commissioner Report for further details.

3 1. EXECUTIVE SUMMARY

4 1.1. BACKGROUND

Hydro Ottawa was formed as a result of the amalgamation of five municipalities in the year 2000. At the time of amalgamation, the most advantageous option was to move all central functions to a new, purpose-built facility and to create distributed work centres for all construction and maintenance functions. However, due to the time constraints associated with the amalgamation and the magnitude of the capital decision to be made, all facilities were retained for the time being. As part of its distribution rate application filed in June 2011 (hereinafter referred to as its "2012 Cost of Service application"), a Facilities Strategy was presented and it described the status of facilities and the need to further evaluate and identify the best development solution. At that time Hydro Ottawa requested funding to purchase land, but not did not seek funding for the overall project.

15

In its 2016-2020 Custom Incentive Rate-Setting ("Custom IR") application² filed April 29, 2015 (hereinafter referred to as its "2016-2020 Custom IR application"), Hydro Ottawa proposed to construct new facilities on two parcels of land that were purchased in 2012 and 2013, namely the Eastern Operations and Administrative Office Building ("East Campus") and a Southern Operations & Warehouse ("South Campus"), collectively referred to as "New Administration and Operations Facilities". In that application, the estimated cost of the New Administration and Operations Facilities was \$92.3M. This funding was for land and to construct new facilities that, amongst other objectives, would:

Page 2 of 73

- a) replace end of life buildings;
- b) move Hydro Ottawa's operational centers out of high traffic residential districts to sites
 with ready access to major highways within the Ottawa area;
- 4 c) consolidate operations and administrative staff; and
- 5 d) upgrade the operational centers in order to provide better response to customers.

7 In its Decision and Order dated December 22, 2015³ ("2015 Decision"), the OEB assessed and 8 approved the need for the New Administration and Operation Facilities.

The OEB also approved provisional funding of up to \$66.0M to enable Hydro Ottawa to proceed with the Request for Proposal process while ensuring that the final cost of the New Administration and Operation Facilities would be subject to a prudence review at a future date.

In order for Hydro Ottawa to track actual project cost versus the provisional funding amount, the

14 OEB established a series of deferral accounts.

16 Concurrent with the 2016-2020 Custom IR proceeding, in August 2015 a Request for Qualifications ("RFQ") process was initiated in order to identify potential contractors capable of providing Design Build services in support of the construction of new facilities.

In September 2015 the Strategic Initiatives Oversight Committee ("SIOC") of the Hydro Ottawa Board reviewed the project cost estimate and agreed that based on early indications of increased costs, the budget for the project would be capped at \$96.5M plus interest and overhead. By January 2016 a more detailed estimate of project costs was completed, identifying estimated costs of \$124.7M. This higher project cost estimate was unacceptable to Hydro Ottawa senior management and the Board of Directors and direction was provided to reduce the estimated project cost and scope. Based on this direction a revised plan and estimate was developed, re-confirming a project budget of \$96.5M plus interest and overhead. A Request for

- 1 Proposals ("RFP") was then sent to the top four qualified respondents identified through the
- 2 RFQ process. Competitive bids were received and evaluated and a Design-Build contractor was
- 3 selected for the project.

4

- 5 In order to ensure that the procurement process was conducted in a fair, open and transparent
- 6 manner, a Fairness Commissioner was engaged from the outset of the RFQ process to the
- 7 conclusion of the RFP phase. The Commissioner was satisfied that due process was followed.
- 8 The report in its entirety is included in this Application as Attachment 2-1-1(B): Fairness
- 9 Commissioner Report. The project was actively managed by a project team and ongoing
- 10 oversight was provided by Hydro Ottawa senior management and the Hydro Ottawa Board of
- 11 Directors through the SIOC.

12

13 1.2. DESCRIPTION OF FACILITIES

14 The new facilities consist of two campuses, described as follows:

1516

17

18

19

- The East Campus is located at 2711 Hunt Club Rd. and is the new eastern operations centre and administration office. This facility consists of three distinct buildings comprised of:
 - a) an Administrative Office Building ("EC-1"),
- b) an Operations Centre ("EC-2"), and
- c) a Paper Insulated Lead Covered ("PILC") Cable Storage Facility ("EC-3").

2223

There is also a solar generation net metering facility on the property.

2425

Hydro Ottawa moved into this property in stages over the January to May 2019 period.

2627

28

2. The South Campus is located at 201 Dibblee Rd. and is the Operations Centre for the south and western portion of Hydro Ottawa service territory. This facility is one

11 1.4. PROJECT BENEFITS AND PRUDENCY

12 The guiding principles for the project were collaboration, innovation, flexibility & adaptability,

13 health & wellness and sustainability. Through the construction of the East Campus and South

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 10 of 73

1 Campus facilities the identified objectives are being met and the expected benefits are starting

2 to be achieved. These benefits include operational efficiency in areas such as responsiveness

3 to customer trouble calls and outages, work team collaboration, logistics and inventory

4 management, safety and wellbeing, and reduced environmental impact.

5

6 The buildings have been "right sized" and Hydro Ottawa has reduced its workplace space

7 standards. Office sizes are now lower than the Federal Government workplace space standards

8 for most positions and office space per employee is lower than benchmarked LDCs. Land is

9 fully utilized and there is room for nominal future office staff growth through the use of flexible

10 office design and touch-down work stations. Overall, project costs compare favourably to other

1 LDCs when escalation and land costs are taken into consideration.

12

13 The project was prudently managed throughout each phase and had an active governance,

4 reporting and cost control structure. Potentially higher-than-anticipated costs were identified in

15 advance and decisions made on a timely basis regarding appropriate trade-offs and changes.

16

17 Hydro Ottawa has received "value for money" from this project with the stated objectives of the

8 project being achieved and costs comparing favourably to similar construction projects. This

19 was a "once in a generation" capital project and the results will benefit Hydro Ottawa customers

20 over many years to come.

21

22 The following sections provide details on the background of the project, a description of the

23 facilities constructed, a summary of project costs and a demonstration of the various aspects of

24 overall project prudency.

Hydro Ottawa Limited

Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 11 of 73

1 2. BACKGROUND

2 2.1. HISTORY OF NEW ADMINISTRATION AND OPERATIONS FACILITIES PROJECT

In its 2012 Cost of Service application, Hydro Ottawa provided evidence that discussed a strategy to address the future use of facilities acquired through the amalgamation of five municipalities. This evidence also identified the need for new facilities to meet future Administration and Operations facility needs. The facilities strategy identified and evaluated four options that would address the facility needs of Hydro Ottawa. These options were:

8

10

- 1. Retain Existing Facilities;
- 2. Consolidate all of the inside Administrative Staff at the Albion Road Facility;
- 3. Consolidate all of the inside Administrative Staff at the Merivale Road Facility; or
 - 4. Construct New Facilities at Optimal Locations.

13

12

After considering the four options, it was decided that the lowest cost and best value option to pursue was Option 4 "Construct New Facilities at Optimal Locations". At that time, approval was sought and subsequently received to include \$4.0M in capital expenditures to acquire land for the new facilities. Funding for the actual construction cost was not sought in that application with the expectation being that construction would take place over the 2013-2015 period and approval for these costs would be included in a future rate application.

20

Subsequent to the OEB's Decision in Hydro Ottawa's 2012 Cost of Service application, the purchase of land and the construction of the new facilities was deferred. Over the 2012-2014 period appropriate land was identified and purchased and more detailed plans were developed for the construction of new facilities.

25

Over the course of Hydro Ottawa's 2016-2020 Custom IR proceeding, the utility presented evidence in support of a request to spend \$92.3M on land and buildings for New Administration and Operations Facilities at two new locations, as presented in Table 4 below.

Hydro Ottawa Limited

Table 4 – 2016-2020 Custom IR Application - Facilities Project Estimate (\$'000s)

	East Campus	South Campus	Total
Land	\$12,716	\$6,798	\$19,514
Construction	\$56,813	\$16,020	\$72,833
TOTAL	\$69,529	\$22,818	\$92,347

2

3 Hydro Ottawa and intervenors participated in a settlement conference and subsequently filed a

4 Settlement Agreement dated September 18, 2015. As part of that agreement, the parties

5 accepted,

6 7

8

"... Hydro Ottawa's evidence that the proposed budget of \$73 million (without land) for the construction of Hydro Ottawa's new operating centers and administrative facilities as set out in project description and business case contained in Exhibit B-1-2 and Exhibit B-1(A) is an appropriate spending level on the capital spending for the proposed facilities. The Parties agree that the new facilities represents a once in a generation investment."

1112

10

Subsequent to filing the Settlement Agreement, the OEB convened an oral hearing on September 30, 2015 to ask questions on the proposed Settlement Agreement. At this hearing, various aspects of the agreement were discussed including the new facilities and the use of deferral accounts. In the OEB's subsequent Decision on the Settlement Proposal,⁵ the OEB said:

18 19

"The OEB does not approve the settlement proposal as filed. The OEB does not find sufficient evidence to determine prudence of the following:

202122

23

24

- The \$73 million cost estimate of the new administration and operations buildings (the New Buildings).
- The need for approximately 9 acres of land in excess of the building requirements at a cost of \$4 million "to expand in future, if necessary". 6

²⁶ Hydro Ottawa Limited, Settlement Proposal, EB-2015-0004 (September 15, 2015), page 15.

²⁷ Ontario Energy Board, *Decision on Settlement Proposal and Procedural Order No. 11,* EB-2015-0004 (November 28, 23, 2015)

^{28 23, 2015).} 29 ⁶ *Ibid*, page 2.

Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 13 of 73

1 Notwithstanding this determination, it is critical to note that the OEB also stated the following:

"The OEB finds that **Hydro Ottawa has demonstrated the need for the New Buildings**. The current buildings are at the end of their useful lives and at capacity from a staffing perspective". (Emphasis added)

7 With respect to funding, the OEB Findings stated that:

"The OEB is prepared to approve Y-factor treatment based on the recovery of up to \$66 million combined for the proposed New Buildings and the land.... The \$66 million was determined by the OEB as a reasonable amount to enable Hydro Ottawa to proceed with the Request for Proposal process while ensuring that any additional cost of the New Buildings and the land is subject to a prudence review at a future date... While Hydro Ottawa has applied for recovery of up to \$92 million for the New Buildings and land in the Custom IR term, the OEB is only prepared at this point to accept up to \$66 million."

"The OEB expects that Hydro Ottawa will provide the evidence to support its spending above \$66 million for the New Building and land and proposed rate base additions as part of its next rebasing application. The evidence would need to demonstrate prudence of the cost of the New Buildings, land and the associated benefit to customers.⁸

The Settlement Agreement was updated accordingly and re-filed on December 7, 2015 to include the following section:

"The Parties agree, pursuant to Procedural Order No. 11 that Hydro Ottawa may proceed to issue a Request for Proposal and that Hydro Ottawa is approved to incur expenses up to \$66 million for the land and buildings associated with the New Facilities as described in Hydro Ottawa's Custom IR Application. The Parties agree that this approval is based on the OEB's assessment of and concurrence with Hydro Ottawa of its need for the New Facilities. The \$66 million includes \$15 million for the cost of land and \$51 million towards the construction of the New Facilities. The Parties acknowledge the OEB's statement that the \$66 million is in no way determinative of the final amount the OEB will accept as being prudently incurred and that the OEB will assess prudence for additions above \$66 million based on evidence to support spending above \$66 million as supplied by Hydro

_

^{35 &}lt;sup>7</sup> *Ibid*, page 3.

³⁶ ⁸ *Ibid*, pages 4-5.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 Attachment A **UPDATED** May 5, 2020 Page 14 of 73

1 Ottawa at its next rebasing. For clarity the Parties understand that the original agreement 2 reached on September 18, 2015 was for \$93 million which comprised of \$19 million for the land and \$73 million for the buildings construction. In Procedural Order No. 11 the 3 Board approved expenses up to \$66 million comprising of \$15 million for the land, \$51 5 million for the New Facilities."9 6 7 The OEB issued its Decision in the proceeding on December 22, 2015. With respect to the proposed new facilities the OEB said: 9 "However, the OEB did not find sufficient evidence to determine prudence of the \$73 10 million cost estimate of the New Buildings and the \$19 million cost of land. While the 11 OEB found that Hydro Ottawa had established the need for the New Buildings, the 12 excess building and land capacity was not supported by the evidence."10 (Emphasis 13 14 added) 15 16 Based on its review of the evidence, the OEB stated that it was prepared to approve Y- factor 17 treatment based on the recovery of up to \$66M combined for the proposed New Buildings and 18 the land. The decision stated that: 19 "The \$66 million was determined by the OEB as a reasonable amount to enable Hydro 20 Ottawa to proceed with the Request for Proposal process while ensuring that any 21 22 additional cost of the New Buildings and the land is subject to a prudence review at a future date."11 23 24 25 Further to the OEB direction provided in the 2016-2020 Custom IR Decision, Hydro Ottawa is

28

29 2.2. RECAP OF THE NEED FOR NEW FACILITIES

30 The need for new facilities was established in the 2016-2020 Custom IR proceeding where

26 now providing information by way of this Application to support the prudency of expenditures

27 related to land purchased and the construction of buildings for new facilities.

3

1

2

The following provides a summary of evidence previously submitted in support of the need for new facilities. The need for new facilities was identified 20 years ago when Hydro Ottawa amalgamated from five former municipalities namely Ottawa Hydro, Gloucester Hydro, Nepean Hydro, Kanata Hydro and Goulbourn Hydro. Due to the short timeframe given for amalgamation and the magnitude of capital required, Hydro Ottawa opted to temporarily keep the facilities that existed at that time. These facilities are now between 45 and 60 years old, not in optimal locations, were designed and built in a different era and are at the end of their useful life. These facilities are also at capacity, in need of major repair and no longer meet operational needs. Key reasons in support of the established need for the new facilities are:

14

15 Asset End of Life

Hydro Ottawa's investment in new facilities is a once in a generation investment. This investment was identified 20 years ago to better locate the operation centres within the service territory, to consolidate administrative functions, to modernize the work environment and to provide for future growth. Buildings such as the Albion Road facility are 60 years old and were designed and built in an era to meet a very different need from what is currently and prospectively served.

22

23 Public Safety

- Due to commercial and residential growth in the areas surrounding Hydro Ottawa facilities, truck and employee traffic poses safety risks to the general public. At the Albion Road facility for example, school children board and debark from school buses just outside the Hydro Ottawa
- Ontario Energy Board, Decision on Settlement Proposal and Procedural Order No. 11, EB-2015-0004 (November 23, 2015), page 3.

Attachment A
UPDATED
May 5, 2020
Page 16 of 73

- 1 facility. Wide turning bucket trucks must navigate heavily populated residential streets posing a
- 2 risk to public safety.

3

4 Operational Efficiency

Hydro Ottawa's move to new facilities is further motivated by the need to consolidate its administrative and operational staff promoting organizational and operational synergies. Consolidating administrative, technical and operational staff will permit greater operating efficiencies by increasing opportunities for collaboration and cross-functional teamwork. In addition to providing a greater foundation for productive collaboration, the new facilities are located close to major traffic arteries in the City of Ottawa and significantly reduce travel time to work locations by work crews resulting in improved customer service and response times. The East Campus location decreases travel time to the core service area, and the South Campus improves the access to main warehousing and expanded south/west service areas and is aligned with the growth of the City.

15

Employee Health and Safety

Hydro Ottawa's existing facilities are being extended beyond their useful lives and are unable to meet future requirements without major renovations or requiring new construction/leasing off-site facilities. The current facilities have many deficiencies several of which present possible health and safety concerns for Hydro Ottawa staff, crews and customers and/or require substantial investment to replace or repair. For example there have been elevator motor failures trapping staff, rodent infestations, poor air quality and there is uneven pavement and flooring causing a risk of slips and falls. The building also requires major investment to upgrade the building envelope (roof, windows, flooring, HVAC system) to facilitate a more favourable work environment.

26

27 **2.3. KEY OBJECTIVES**

28 Key objectives of the Facilities Renewal Program were to:

Hydro Ottawa Limited

13

14

15

16

2021

22

- move Hydro Ottawa's operational centers out of high traffic residential districts to sites with ready access to major highways within the Ottawa area;
- consolidate operations and administrative staff;
 - upgrade the operational centers in order to enhance customer service and satisfaction;
- increase overall operating efficiencies through proper location, integration and
 streamlining of services;
 - facilitate organizational synergies by consolidating administrative and technical staff and adapting modern technologies and innovative workplace standards;
 - provide leadership in energy conservation and sustainability;
- create a healthy, flexible and multi-functional work environment for Hydro Ottawa employees; and
 - achieve Leadership in Energy and Environmental Design ("LEED") Gold certification for the East Campus Administrative Office building and LEED Silver for East and South Operation Buildings, and maximize energy efficiency.

17 **2.4**. **TIMELINE OF KEY DATES**

- 18 The following summarizes key milestones and dates culminating in the completion of the new 19 facilities project:
 - December 28, 2011, 2012 Cost of Service proceeding: OEB Decision accepted need to proceed with development work on new facilities including land purchase.
- December 24, 2013: Initial RFQ was posted and closed on February 28, 2014
- April 2015: Retained a third party project advisor to do a peer review on the project procurement and intended Design Build contract
- April 29, 2015: Hydro Ottawa filed its 2016-2020 Custom IR application which included a request for \$92.3M for the Facilities Renewal Program; The \$92.3M was based on a high level (Class D) feasibility estimate

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 18 of 73

- July 30, 2015: Peer review report on design build procurement for new facilities
 prepared, recommending improvements in the RFQ/RFP documentation and to revise
 and re-initiate the process
- August 26, 2015: Updated RFQ issued
- September 22, 2015: SIOC agreed that total project cost would be capped at \$96.5M
 plus capitalized interest and overhead
- November 23, 2015: RFQ submissions evaluated and results communicated, four
 qualified proponents identified
- December 22, 2015:: OEB Decision concurred with the need for new facilities and approved provisional funding of \$66.0M with requirement to demonstrate prudency for any amounts in excess of that amount
- January 20, 2016: a more thorough estimate (Class C) of \$124.7M plus capitalized
 interest and overhead was developed
- February 3, 2016: SIOC review and decision to make necessary design changes and scope reductions and re-confirm project budget at \$96.5M plus capitalized interest and overhead
- May 18, 2016: Completed value engineering and revised design validation and a
 detailed Class B estimate prepared
- May 26, 2016: RFP issued to four qualified proponents
- October 14, 2016: Fairness Commissioner report issued, confirming fairness of RFP process
- October 18, 2016: Final results of RFP evaluation communicated; M. Sullivan & Son chosen as Design-Builder
- October 2016 May 2019: Ongoing project construction, monitoring and cost control
- May 2019: Project completed at a cost of \$80.0M (\$99.5M including land, capitalized interest and overhead) and staff move to new facilities

1 Three separate buildings are part of the East Campus with a total building footprint of 194,965

2 Sq. Ft. The largest structure, the Administrative Office Building, is a reinforced concrete building

3 consisting of three floors of administrative office space, a partial lower level and structural steel

4 roof over the top level mechanical floor for a total of 127,132 Sq. Ft.

5

6 The Eastern Operation Centre is a 57,515 Sq. Ft. single-storey building with a pre-engineered

7 garage and a conventional masonry and steel structure for the office space and material

8 management functions, plus the necessary operational muster rooms, boot washing, lockers

9 and shower areas. This building has an indoor garage for parking 42 heavy duty fleet vehicles,

10 and also provides kitting bays, material kanbans, and overhead and underground tool storage

11 rooms.

12

13 The enclosed PILC Storage Facility is a 10,318 Sq. Ft. Paper Insulated Lead Covered cable

14 storage building with a clear span pre-engineered steel frame superstructure which is supported

15 on a reinforced concrete foundation. This building is a warehouse to store and process

16 overhead and underground cable and provides protection from the elements.

17

18 The East Campus also has a 2.52 acre solar yard and an exterior material storage yard.

19

20 Images of the East site and main buildings are included in Figures 6 and 7 below.

- Warehouse;
 - Metering calibration, workshop and storage; and
- Transformer shop

7

3

5

8 3.3. STAFF IN NEW FACILITIES

9 Where staffing numbers are presented in this document, Hydro Ottawa is using headcount not

10 FTEs, as headcount more accurately reflects space usage needs. For example, when students

11 are hired in the summer there is a need to have space for the whole person, not a calculated

12 FTE amount.

13

14 The East Campus facility includes space for staff of both Hydro Ottawa and other affiliates of

15 Hydro Ottawa Holding Inc. ("Holding Company"). Cost transfers associated with the shared use

16 of the East Campus space are transacted consistent with the Affiliate Relationships Code as

17 discussed in Exhibit 4-2-1: Shared Services and Corporate Cost Allocation. Given that the East

18 Campus facility was built to accommodate both regulated and affiliate company staff, Table 7

19 provides staff level headcount information for Hydro Ottawa and affiliates.

2021

Table 7 – Number of Staff at New Facilities - Hydro Ottawa and Affiliates

(Headcount - June 30, 2019)	East Campus	South Campus
Administration (Inside)	419	18
Operations (Outside)	140	76
TOTAL	559	94

22

23 The East Campus includes Hydro Ottawa staff associated with the following functions:

24 Executive Team, Information Management and Information Technology, Human Resources,

- 1 Finance, Customer Service, Communications and Public Affairs, Distribution Operations –
- 2 Central & East, Distribution Asset Management, Distribution Operations Underground, System
- 3 Operations, Business Performance, GIS and Records, Policies and Standards, Design & Asset,
- 4 Distribution Operations Business Performance and Scheduling, Stations East and Engineering.
- 5 In addition, as noted above, the East Campus includes space for staff from affiliate companies.

- 7 The South Campus includes Hydro Ottawa staff associated with the following functions:
- Metering, Distribution Operations South, Stations South, Engineering, Business Planning and
- 9 Scheduling and Materials Management.

10

PROJECT BENEFITS 11 **3.4.**

12 Key Principles that guided the design of the buildings were:

13 14

15 16

17

18

19

- Collaboration: A flexible and adaptable workplace that encourages collaboration and new ways of working and making decisions;
- Health & Wellbeing: Put physical and mental wellbeing, as well as sustainable living, at the forefront of your daily routine; and
 - Innovation: A resilient workforce that embraces change and disruption through innovative ways of thinking and working.

- 21 As discussed in section 2.1 above, the OEB agreed that Hydro Ottawa had demonstrated the 22 need for the new facilities. Hydro Ottawa identified several factors that drove the established 23 need, some of which include: (i) the replacement of aging buildings that are at the end of their 24 useful lives; (ii) a relocation of operational centers out of high traffic residential districts; (iii) 25 increase of overall operating efficiencies through proper location, integration and streamlining of 26 services; and (iv) an upgrade of the operational centers in order to provide better operational 27 response to customers.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 29 of 73

1 Hydro Ottawa's old facilities were between 45 and 60 years old and were designed and built in a

2 different era and according to outdated standards. In light of this, at the core of the new facilities'

3 design was not only to address Hydro Ottawa's need for new facilities but also to take

4 advantage of modern best building practices and to build healthy and sustainable facilities.

5 There is research that demonstrates employers who care about the environmental impact of

6 their buildings as well as the health and wellbeing of their staff are rewarded by improved

7 productivity and loyalty, which can be worth more than their initial investment. 13

8

9 Hydro Ottawa completed construction of the new facilities in May 2019. Staff moved into the 10 facilities over a series of moves during the January to May 2019 period. By designing and 11 building the new facilities, Hydro Ottawa addressed operational and safety needs. The utility 12 also expects that the new facilities will improve employee workplace wellness and productivity 13 and reduce the environmental footprint of building operations. The new facilities are sustainable, 14 energy efficient and certified to LEED Gold standards. The resulting benefits of the new facilities 15 are described in more detail below.

16

17 **3.4.1. Operational Efficiency**

One of the objectives of the new facilities was to enhance operational efficiency. This objective involves consolidating operations and administrative staff as well as upgrading operational centers in order to provide better response to customers and create better, more efficient working conditions. The resulting benefits in this regard include the following but not limited to:

2223

2425

 Work team collaboration: Consolidating administrative, technical and operational staff allows for greater operating efficiencies and opportunities. Having various work teams (e.g. Underground Lines, Overhead Lines, 24/7, Stations, Designers, Engineers) within the Operations Centers or adjacent, in the case of EC-1, allows for more efficient

World Green Building Council, *Building the Business Case: Health, Wellbeing and Productivity in Green Offices* (October 2016).

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 30 of 73

collaboration amongst these work groups that improves timely information communication and reduces travel time. This, in turn, results in more effective work planning and execution as well as improved response time. Hydro Ottawa's underground and metering groups are able to allocate their resources between the East and South campuses to enable more efficient delivery of projects across the service territory and reduce overall travel time. Meeting rooms and common spaces in operations centres help to promote collaboration. For example, the use of "Ready Rooms" allows for improved tail boarding amongst teams at the beginning of the work day. Meeting room technology improves timely information communication and reduces travel time as meetings across the service territory can be conducted virtually. Also, the use of touchdown locations in operations centres allows designers, engineers and other work groups to temporarily work from various locations to better support field activities.

Accessibility: The new facilities are located in close proximity to major traffic arteries in the City of Ottawa (Highway 417 in the East and Highway 416 in the South portions of Hydro Ottawa service territory). This reduces travel time to work locations by work crews resulting in better customer service and improved incident response times. Consolidated 24/7 operation located more centrally within the city, leading to better accessibility to ready access to highways 416 and 417, leads to improved incident response times.

• Logistics: At both the East Campus and the South Campus, there are better designed yards to load/unload and store large material and equipment (pole trailers, transformers, semi-truck deliveries, etc.). There are also multiple tool cribs providing for the separation and improved organization of material and operating equipment for individual teams within work groups and safety and accident prevention is enhanced with larger garage entrances and exits, including one-way traffic flow. The specific building for PILC cable EC-3 has space and a dedicated crane for loading and unloading reels and scrapping

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2

Page 31 of 73

cable in an efficient manner. The EC-3 building also provides a facility which significantly decreases the risk of cross contamination of lead and asbestos by providing separate washing facilities and storage for designated substances.

4 5

6

7

8

1

2

Warehouse benefits: Having a centralized warehouse reduces overall inventory
administration. It provides for a more efficient layout for stock-picking and workflow. It
also eliminates travel between sites, reduces potential communication gaps and
standardizes site specific procedures for ease of training. Improved highway proximity
also improves delivery access for third party supply chain providers.

1011

12

13 14

1516

17

18

19

20

21

- *Indoor vehicle parking*: The operational benefits of indoor parking for heavy duty fleet vehicles include:
 - reduced warm-up time resulting in higher productivity, and lower greenhouse emissions that would result from outside cold weather idling;
 - expected longer average service life of vehicles;
 - improved functionality of live line tools on aerial devices as these tools must be kept clean and dry in order to maintain dielectric strength and insulation levels.
 The former facility was severely constrained in this regard as the newer bucket trucks did not fit in the garages; and
 - keeping electronic test equipment, mobile computers, first aid supplies, rubber cover up and live line tools in an above freezing environment.

22

23 **3.4.2**. Safety

Another objective of the new facilities was to move Hydro Ottawa's operational centers out of high traffic residential areas to sites that have an easy access to major highways. Due to commercial and residential growth in the areas surrounding Hydro Ottawa facilities, truck and employee traffic posed safety risks to the general public. For example, at the Albion Road facility, school children boarded and debarked from school buses just outside the Hydro Ottawa

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 32 of 73

facility. Wide turning trucks had to navigate heavily populated residential streets posing a risk to public safety. Through their location in commercial and light industrial areas close to main highways, the new facilities largely resolve this concern. Furthermore, the new facilities enhance safety and accident prevention for Hydro Ottawa's employees by having larger garage entrances and exits, with one-way traffic flow and separated staff vehicle parking and routes.

6

7 3.4.3. Employee Wellness and Productivity

8 Hydro Ottawa is committed to improving health, wellbeing and productivity of its employees. The 9 new facilities were designed and built with the goal to create a healthy working environment that 10 enhances the health, wellbeing and productivity of Hydro Ottawa's employees. In 2017, a 11 multidisciplinary team of experts from Harvard University carried out a study to identify the 12 elements and effects of healthy indoor environments as well as to understand the interaction 13 between personal and public health, productivity, and building design (the "Study"). 14 Some of 14 the highlights of the Study include the following:

15

16

17

18

19

20

21

• People work more efficiently in environments with good air quality. Common indoor pollutants that pose risks to human health include nitrogen oxides, carbon monoxide, ozone, particulate matter, and volatile organic compounds ("VOCs") found in building materials, printer emissions, cleaning supplies, paint, glue, furniture, and other materials. Exposure has been linked to numerous health problems, such as cancer and respiratory diseases, as well as absenteeism, poor productivity, and low cognitive function.

2223

2425

26

27

 Buildings constructed with low-VOC materials and finishes reduce exposure to toxic substances. Studies show employees who work in buildings where fresh air is adequately circulated and distributed are more productive and healthier than those who work in poorly ventilated spaces. A low-VOC, high-ventilation office space with superior air quality improves cognitive function by as much as 101%.

²⁸ ¹⁴ Harvard T.H. Chan School of Public Health, *The 9 Foundations of a Healthy Building* (February 2017).

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 Attachment A UPDATED May 5, 2020 Page 33 of 73

• Comfortable temperature and humidity levels are less likely to make workers feel sick or get sick. A study on workplace thermal conditions found that workers experienced itchy and watery eyes, headaches, and throat irritation when exposed to poor ventilation, humidity, and heat. When indoor environments are too warm, occupants can experience symptoms of "sick building syndrome," such as headaches, dizziness, fatigue, and flu-like symptoms, as well as negative moods, heart rate changes, and respiratory problems. Temperature and humidity may also influence disease transmission, as cold, dry environments are more likely to spread the flu virus, and warm, humid environments are conducive to the growth of mold and fungus.

10 11

12

1314

15

1

2

4

5

6

7

8

Good lighting leads to better sleep at night and better productivity during the day. Lack of
natural light has been associated with physiological and sleep problems and depression.

Exposure to daylight and access to windows at work have been linked to better sleep
duration, an improved mood, less sleepiness, lower blood pressure, and increased
physical activity. Office workers with access to natural light have a better circadian
rhythm, which is important for sound sleep and cognitive function.

161718

19

20

21

22

23

2425

Reducing the noise level improves productivity and job satisfaction. With about 70% of offices now having an open floor plan, more workers are susceptible to distractions from noise. A survey of more than 1,200 senior executives and nonexecutive employees found that 53% reported ambient noise reduced their work satisfaction and productivity. Exposure to environmental noise can increase accidents and impair employee performance and productivity, especially during difficult and complex tasks, and has been linked to higher blood pressure, changes in heart rate, and hypertension. Sound masking was included in the administration building to eliminate ambient noise.

26

27 Through designing and building the new facilities according to healthy and green building 28 standards, Hydro Ottawa expects to achieve the following benefits: (i) maximize employee

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 34 of 73

1 performance and productivity, (ii) attract and retain high-quality employees, (iii) reduce impacts

2 of presenteeism and absenteeism and (iv) promote improved health for employees.

3

4 The new facilities are functional – not opulent. They have modern audio-visual and information technologies and amenities that help to promote employee collaboration, innovation and flexibility. The offices have been ergonomically designed and furnished in order to create a productive work environment (e.g. sit/stand desks). The office design will lead to reduced absenteeism, reduced sick time, increased staff morale and retention and recruitment success.

9

10 3.4.4. Environmental Footprint of the New Facilities

Hydro Ottawa is committed to reducing the environmental impacts of its building operations.

Buildings can generate up to 35% of all greenhouse gases, 35% of landfill waste comes from
construction and demolition activities, and up to 70% of municipal water is consumed in and
around buildings. As such, making buildings greener can have a substantial impact on larger
environmental goals. Furthermore, in recognition of the potential negative impacts associated
with the design, construction and operation of the municipal building inventory, the City of
Ottawa enacted a policy that requires all new municipal buildings to be designed and delivered
in accordance with the Certified performance level of the LEED green building rating system.

19

LEED certification provides independent, third-party verification that a building has been designed and built using strategies aimed at achieving high performance in key areas of human and environmental health: location and transportation, sustainable site development, water savings, energy efficiency, materials selection and indoor environmental quality. There are four certification levels: Platinum, Gold, Silver and Certified. Regardless of the certification level achieved, all projects must meet mandated prerequisites and then choose from 110 available credit points to reach the desired certification level. The LEED Platinum level certification achieves the highest honor and the LEED Certified level achieves fundamental performance. Hydro Ottawa's new facilities have been built and certified to LEED Gold standards. The project

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 35 of 73

1 budget called for the Operations buildings, namely EC-2 and SC-1, to be designed and built to a

2 LEED Silver standard. However, through negotiations with the Design-Builder, these facilities

were built to a LEED Gold standard at no incremental cost.

4

5 In addition to the above mentioned LEED certification, the new facilities also provide

6 environmental benefits as they receive a portion of their electrical power through on-site solar

7 generation. Overall, the new facilities help to reduce the environmental impact of Hydro

8 Ottawa's building operations.

9

10 3.5 CUSTOMER ENGAGEMENT

As noted above the Facilities Renewal Program has been considered by Hydro Ottawa since amalgamation 20 years ago. As part of Hydro Ottawa's 2012 Cost of Service application, a Facilities Strategy was presented and it described the status of facilities and the need to further evaluate and identify the best development solution. At that time, Hydro Ottawa requested funding to purchase land, but did not seek funding for the overall project. The rate hearing process was a public, open and transparent process. The plans were reviewed by the OEB in that proceeding. In addition, at the proceeding intervenor groups, representing various public interests, participated in the process and reviewed Hydro Ottawa's plans.

19

20 On April 29, 2015 Hydro Ottawa submitted its 2016-2020 Custom IR application to the OEB.

1 This application presented evidence in support of a request to spend \$92.3M on land and

2 buildings for New Administration and Operations Facilities at two new locations, and outlined the

need for the facilities. During the customer consultation process that preceded the filing of the

24 2016-2020 Custom IR application, Hydro Ottawa engaged customers on the matter of these

25 facilities. For example, the workbook survey utilized by the company to solicit feedback from

26 customers included such questions as what customers' views were on Hydro Ottawa having

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 1 Schedule 1 Attachment A **UPDATED** May 5, 2020 Page 36 of 73

1 proper facilities to house its staff, vehicles, and tools. In addition, as part of the OEB

2 proceeding to review the application, Hydro Ottawa held a public meeting on July 7, 2015,

during which information about the new facilities and the plan to recover costs through a Y

Factor was shared. 16

5

During the hearing process information on the Facilities Renewal Program was once again

7 scrutinized by both the OEB and the intervenor community, with the intervenor community and

OEB Staff agreeing to total projected funding amount as part of the initial Settlement Agreement

dated September 15, 2015.¹⁷ In addition, as a result of this proceeding the OEB found that

10 Hydro Ottawa had established the need for the New Buildings.

11

12 During the scoping process for the new facilities in late 2015 and early 2016, a revised estimate

13 indicated that the cost to construct the facilities as planned would be \$124.7M (see section 4.1

of this Attachment). Hydro Ottawa considered this cost to be unacceptable from a customer

15 rates perspective and the scope of the project was re-visited to bring the budget down to

\$96.5M excluding interest and overhead. This consideration of customer impacts resulted in a

reduction in cost of approximately \$28M. The project was completed in 2019, on-time and on

budget for a final total cost of \$99.6M including interest and overhead. An average residential

customer in Ottawa will see approximately \$0.93 per month on their bill as a result of the new

20 facilities.

21

22 Throughout this period, management of Hydro Ottawa reported to its Board of Directors and,

23 through its shareholder the Holding Company, to the City of Ottawa on the status of the project.

- 1 This project has been highlighted in Hydro Ottawa's annual report every year since 2012. The
- 2 annual report is part of a package that is provided by the Chair of the Hydro Ottawa Board to the
- 3 Mayor of Ottawa and Ottawa City Council at their Annual General Meeting ("AGM") held in June
- 4 each year.

5

- 6 The new facilities are also identified on Hydro Ottawa's public web site and were mentioned in
- 7 the customer engagement effort associated with this Application. 18

8

9 4. PROJECT COSTS

10 4.1. OVERALL COSTS

- 11 Since 2015, as the project progressed, cost estimates were refined. These cost refinements
- 12 resulted in increases from the initial estimated cost as more detailed design information became
- 13 available. In order to control costs to a level closer to the original budget, adjustments were
- 14 made in a number of different areas such as project scope, office size and building finish. The
- 15 progression of key project estimates is presented in the following table:

1617

Table 8 – Summary of Project Costs

	EB-2015- 0004	SIOC Approved	EB-2015- 0004	Updated	SIOC	EB-2019- 0261
	Submitted	Budget	Approved	Estimate	Re-Confirmed	Final Cost
Total Project						
- Land	\$19,514	\$19,514	\$15,000	\$19,514	\$19,514	\$19,495
- Construction	\$68,903	\$76,986	\$51,000	\$105,186	\$76,986	\$76,527
	\$88,417	\$96,500	\$66,000	\$124,700	\$96,500	\$96,022
- Interest & O/H	\$3,930					\$3,522
TOTAL	\$92,347					\$99,544
	April 29, 2015	Sept. 22, 2015	Dec. 20, 2015	Jan. 20, 2016	Feb. 3, 2016	Sept. 30, 2019

Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 38 of 73

At the time, the initial \$92.3M estimate was developed for the 2016-2020 Custom IR application, minimal detailed design information had been prepared. As the project progressed and further planning and design information was prepared, it became apparent to Hydro Ottawa that the cost of the project as initially envisaged would be higher than estimated. In September 2015, the SIOC of the Hydro Ottawa Board of Directors discussed potential cost cutting measures and

agreed that the budget for the project would be capped at \$96.5M plus interest and overhead.

By early 2016, further detailed costing information was developed and the estimated cost of the project increased to \$124.7M (plus interest and overhead). This information was presented to the SIOC at a meeting on February 3, 2016. This increase was unacceptable to Hydro Ottawa senior management and to the SIOC, and action was taken to reduce various aspects of the project costs. These reductions included reducing the size of the Administrative Office Building, reducing office workplace standards (Workplace 2.0 modified) and retaining the Bank Street facility for fleet and training. Based on the proposed cost reduction measures, the Hydro Ottawa

16

7

Detailed design requirements were then updated to reflect these changes and a Request for Proposals was issued on May 26, 2016 to the four proponents qualified through the RFQ process. The RFP responses were evaluated and M. Sullivan and Son was chosen to be the Design Build contractor for the project.

21

Upon completion of the new facilities project, the total project costs were \$99.5M (\$19.5M for land, \$76.5M for construction and \$3.5M for Allowance for Funds Used During Construction ("AFUDC") and burdens), this represents an increase of \$7.2M or 7.8% over the preliminary estimate of \$92.3M in the last rate application. With respect to the hard construction costs of approximately \$57.5M, discussed in section 4.2, these came in below the detailed design (Class B) estimate of May 2016 by 2% or \$1.2M.

28

15 SIOC re-confirmed the project budget to be \$96.5M.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 39 of 73

- 1 The overall project cost excluding interest, AFUDC, and overhead was \$96.0M (\$0.5M under
- 2 the Hydro Ottawa Board-approved figure of \$96.5M). The contingency provided for in the Hydro
- 3 Ottawa Board budget of \$96.5M was used primarily to address issues encountered during
- 4 construction such as:

5

- 6 (i) development charges and municipal requirements from the City of Ottawa;
- 7 (ii) unexpected site conditions (e.g. soil issues at the East Campus);
- 8 (iii) "protected vegetation" at field operations site; and
- 9 iv) technological security and operational improvements.

10

11 4.2. QUANTITY SURVEY REPORT

- 12 A "Quantity Survey Report" dated May 18, 2016 was prepared by an independent professional construction cost estimator. The purpose of the report was to provide Hydro Ottawa a realistic
- 14 estimate of expected probable direct and indirect construction costs for the East Campus and
- 15 South Campus new facilities. This report was based on the experience of the professional
- 16 construction cost estimator, historical costing information and familiarity with the construction
- 17 industry in the Ottawa area. This estimate was prepared in accordance with generally accepted
- 18 principles and practices for estimating construction projects.

19

20 The methodology followed as described in the report is as follows:

2122

23

24

"From the documentation and information provided, quantities of all major elements were assessed or measured from the drawings and outline specifications where possible and priced at rates considered competitive for a project of this type under a fixed price sub-contract in Ottawa, Ontario.

252627

28 29 Pricing shown reflects probable construction costs obtainable in the Ottawa area on the effective date of this report. This estimate is a determination of fair market value for the construction of this project. It is not a prediction of low bid. Pricing assumes competitive bidding for every trade."

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 40 of 73

Estimated project costs as per the Quantity Survey report are presented in Table 9 below. This estimate relates to "hard" construction costs and excludes costs such as land, furniture and furnishings, development fees, professional fees, overheads and financing charges. It is noted that actual costs came in \$1.2M or 2.1% lower than the estimate that was prepared over three years prior. This demonstrates both the rigour of the estimate and also active cost management and control throughout the project life cycle. The hard construction costs as shown below represent 72% of the total construction costs excluding land. The higher than estimated costs on EC-1 is largely attributable to construction issues noted earlier, offset by savings largely in SC-1. Note that the functionality of initially envisioned separate SC-2 building (standalone storage) was incorporated into SC-1 thereby saving hard construction costs on this campus.

11 12

Table 9 – Final Building(s) Cost Compared to Quantity Survey Estimate

(\$)	Quantity Survey May 18, 2016	Final Actual Cost	Variance	Variance %
East Campus				
EC-1	\$29,087,871	\$32,629,279	\$3,541,408	12.2%
EC-2	\$9,355,861	\$7,686,656	\$(1,669,205)	-17.8%
EC-3	\$1,828,092	\$1,989,609	\$161,517	8.8%
	\$11,183,953	\$9,676,265	\$(1,507,688)	-13.5%
Sub-Total EC	\$40,271,824	\$42,305,544	\$2,033,720	5.0%
South Campus				
SC-1	\$18,122,397			
SC-2	\$348,605			
Sub-Total SC	\$18,471,002	\$15,210,734	\$(3,260,268)	-17.7%
TOTAL	\$58,742,826	\$57,516,278	\$(1,226,548)	-2.1%

Hydro Ottawa Limited

Page 41 of 73

- 1 Planned building sizes that served as the basis for the costing in the Quantity Survey report are
- 2 presented in Table 10 below. As compared to the Quantity Survey report, total actual building
- 3 constructed square footage was 10,705 Sq. Ft (or 3.8%) greater than estimated.

4 5

6

Table 10 – Final Actual Building(s) Size Compared to Quantity Survey Report (Square Feet)

East Campus	Quantity Survey May 18, 2016	Final Actual	Variance	Variance %
East Campus				
EC-1	120,825	127,132	6,307	5.2%
EC-2	57,727	57,515	(212)	-0.4%
EC-3	10,361	10,318	(43)	-0.4%
	68,088	67,833	(255)	-0.4%
Subtotal EC	188,913	194,965	6,052	3.2%
South Campus				
SC-1	90,503			
SC-2	3,752			
Subtotal SC	94,255	98,908	4,653	4.9%
TOTAL	283,168	293,873	10,705	3.8%

- 8 In summary, with respect to the direct construction costs as estimated in the Quantity Survey
- 9 report, actual project costs were 2.1% lower than estimated and actual building square footage
- 10 delivered was 3.8% higher than estimated. The result is essentially more building space for a
- 11 lower price than planned.

2

1

3 The main building structures of the new East Campus and South Campus facilities have been

4 designed and constructed to have a service life of 75 years. Other components of the new

5 facilities such as the roofing system, parking lot and internal furnishings and equipment have

6 shorter service lives consistent with the Kinectrics study and engineering and operational

7 experience.²⁰

8

9 4.3. SALE OF FORMER ADMINISTRATIVE AND OPERATIONAL FACILITIES

10 Hydro Ottawa's New Facilities Plan included the sale of buildings that were to be vacated upon completion of the new construction.

12

13 The original New Facilities Plan called for the sale of the Bank Street location and the

14 development of new training and fleet facilities. However, in order to help control project costs, it

15 was decided by the Executive Management Team and SIOC to retain the Bank Street facility for

16 training centre and fleet management purposes instead of building new facilities for these

17 functions.

¹⁸ Other Development Costs include cash allowances, professional fees, furniture, equipment, and permits.

¹⁹ Kinetrics Inc., Asset Depreciation Study for Use by Electricity Distributors, EB-2010-0178 (July 8, 2010).

- 1 The settlement agreement states that any gain or loss from the sale of Albion Road (A & C
- 2 properties), Merivale Road and Bank Street will be given back/charged to customers. The
- 3 Albion Road "A" property is one of the former Administrative Office Buildings and the Eastern
- 4 Operations centre. Albion Road "B" property is being retained as there is a transformer station
- 5 on that site. The Albion Road "C" property is vacant/surplus land and was used for yard storage.

6

- 7 The Albion Rd. Property "A" and Merivale properties have been sold to third parties. Albion Rd.
- 8 Property "A" closed on November 27, 2019 and the Merivale Property closed on September 30,
- 9 2019. Albion Rd. Property "C" (surplus land) is being sold to an affiliate as of December 31,
- 10 2019. An independent valuation was performed by Altus Group to determine the sale price of
- 11 Property "C". The net proceeds are accounted for in deferral accounts as per the OEB's 2015
- 12 Decision. Further detail on the deferral accounts and the values being recorded can be found in
- 13 UPDATED Exhibit 9-1-1: Current Deferral and Variance Accounts.

- 15 The Merivale Rd., Albion Rd. Property "A" and Property "C" have been removed from rate base
- 16 effective September 30, 2019, November 30, 2019 and December 31, 2019 respectively.
- 17 A summary of the properties and the net gain/(loss) is provided in Table 12 below. The updated
- 18 version of Table 12 below reflects final sale values after accounting for 2019 actuals.

1 4.4. Y-FACTOR TREATMENT

10

25

As the in-service date of the New Buildings was uncertain, in its April 29, 2015 Application, Hydro Ottawa proposed to record the revenue requirement impact of the new facilities as a Y-Factor. When the New Buildings became in-service, the new facilities revenue requirement impact would be calculated, and tracked in a deferral account. In its Decision in the 2016-2020 Custom IR proceeding, the OEB approved Y-factor treatment based on the recovery of up to

7 \$66.0M for the new facilities (\$51.0M for the New Buildings and \$15.0M for the land.) When one

8 new facility was in-service, Hydro Ottawa would file an application with the OEB and propose a

9 rate rider to clear the associated revenue requirement.

The new facilities came into service on May 1, 2019. Using the OEB-approved amount for Y-factor treatment of \$66.0M, the annual revenue requirement associated with the new facilities is \$3,320,514 for 2019 and \$5,823,637 for 2020. After accounting for 2019 actuals, the annual revenue requirement associated with the new facilities has been updated to \$3,307,44 for 2019 and \$5,821,770 for 2020. On a monthly basis the revenue requirement is added to the Y-factor deferral account, no carrying charges apply to the Y-factor account. Hydro Ottawa is collecting the initial estimate of the Y-factor through a rate rider effective January 1, 2020. For further detail regarding the calculations, accounting and disposition of these Y-factor costs, please see UPDATED Exhibit 9-1-3: Group 2 Accounts. The total revenue requirement for the new facilities is \$5,019,369 for 2019 and \$8,758,841 for 2020, and has subsequently been updated to \$4,999,624 for 2019 and \$8,757,386 for 2020, after accounting for 2019 actuals. The difference between revenue requirement of the \$66.0M captured in the Y-factor Account and the full cost of the new facilities is being recorded in a separate Regulatory Account, to be collected from customers after a prudencey review.

26 5. PRUDENCY OF THE NEW FACILITIES PROJECT

At the early stage of the new facilities project, Hydro Ottawa established a number of processes and reviews to ensure that each decision associated with the project was prudent and

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 46 of 73

- 1 reasonable in light of the given circumstances. Hydro Ottawa also established checks and
- 2 balances to control the project costs and ensure the project adhered to the schedule. Taken
- 3 together, these actions demonstrate that Hydro Ottawa exercised prudent management in
- 4 planning and execution of the new facilities project.

5

To demonstrate the prudency of the new facilities, this section describes the following:

7

9

10

11

12

13

- right sizing of building design and full utilization of space;
 - land usage and functionality;
 - prudent project planning and procurement processes;
 - execution stages of the new facilities project, including ongoing project cost review and control: and
 - external benchmarking review of similar projects proposed by LDCs.

14

15 5.1. SIZE OF BUILDING AND SPACE UTILIZATION

- 16 A modern, healthy workplace supports greater productivity, a more engaged workforce and
- 17 better results for customers. Hydro Ottawa as an employer has a responsibility to create
- 18 workplaces that support the well-being, wellness and productivity of its employees.

- 20 Given the need for new facilities, Hydro Ottawa completed an office standards review to
- 21 determine the new building space requirements. As the primary guiding workplace standard and
- 22 the basis for its assessment, Hydro Ottawa used the Federal Government Workplace 2.0 Fit Up
- 23 Standards ("Workplace 2.0 Standards"), industry research promoting a healthy workplace and
- 24 Hydro Ottawa Guiding Principles of collaboration, innovation, flexibility & adaptability, health &
- 25 wellness and sustainability. The Workplace 2.0 Standards have been used by the Federal
- 26 Government, regulated entities and various municipalities, including the City of Ottawa. Hydro
- 27 Ottawa also used industry research to support the function of common workspace areas and the
- 28 impact that these spaces can have on employees and productivity.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 47 of 73

Hydro Ottawa then tailored the Workplace 2.0 Standard incorporating industry trends to better align with its operational requirements. Hydro Ottawa modified (i.e. reduced) the standard office space sizes during the design development to increase space allocation consistency, minimize operational costs, and increase office arrangement flexibility for any potential future growth. The resulting Hydro Ottawa workplace standards maximize real estate utilization, reducing overall building areas footprint and long term operational carrying costs. This was done by way of smaller open office workstation environments, increased touch-down work areas for highly mobile or temporary staff, more and varied types of meeting spaces including break-out or collaboration areas for staff, including areas such as a cafeteria, which can transform into a multi-purpose area. Open office environments were designed to maximize direct daylight into work areas, improving staff health and wellness and efficiency. Hydro Ottawa's design of the new facilities promotes its Guiding Principles of Collaboration, Health & Wellness and Innovation that are also in line with office design industry standards. By doing this, the overall health and wellbeing of employees improves which increases innovation, creativity and productivity, benefiting all parties involved.

16

17 Table 13 below summarizes the reduction in space standards by position coincident with the development of the new facilities.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A

CEO	300	300	0
Executives	265	200	(65)
Directors	225	125	(100)
Managers	150	107	(43)
Workstations			
Supervisors	80	36	(44)
Executive Assistant	64	48	(16)
Employees	64	36	(28)
Assigned Touchdown Stn.	64	15	(49)
Unassigned Touchdown Stn.	16	15	(1)
Touchdown Stn Trades	16	One 15 per 5 Empl.	(1)

2

1

As completed, the new Administrative Office Building ("EC-1") building has 127,132 Sq. Ft. of space and houses 419 staff at June 30, 2019. This is approximately 303 gross square feet per employee. Hydro Ottawa notes that this is well below the International Facility Management Association ("IFMA") average of 396 gross Sq. Ft. per occupant as well as the IFMA average of 425 gross Sq. Ft. per occupant for utilities. In addition to being lower than IFMA standards, Hydro Ottawa's workplace standards are typically lower than or at the lower end of the Workplace 2.0 Standard range. A comparison of Hydro Ottawa workplace space standards with the Government of Canada Workplace 2.0 and the IFMA standards for Utilities is provided in Table 14 below.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED

Page 49 of 73

Table 14 – Space Standard Comparison (Square Feet)

Position	Hydro Ottawa	Workplace 2.0	IFMA
Executives	200	200	332
Directors	125	150	228
Managers	107	108	158
Employees	36	48	86
Free Address	15	16	n/a

2

1

In assessing comparable workplace space allocation, Hydro Ottawa reviewed the overall Sq.Ft./Employee space allotment for other LDCs in their new facilities projects. Hydro Ottawa's office and workstation space allocations are lower than the space allocations of other utilities who have (or are proposing to construct) a dedicated administration facility. This comparison is summarized in Table 15.

8

Table 15 – Space Standard Comparison, LDC Administration Buildings

	Hydro	PowerStream	Enersource	Energy +
	Ottawa	(Now Alectra)	(Now Alectra)	Southworks
Gross Sq.Ft./FTE	303	368	527	327

10

Although the main Administrative Office Building is fully utilized and "right-sized" for the current staff level, future staff growth can be accommodated within the current building footprint through re-arranging workstation configuration and making use of peripheral aisle space and common areas.

15

5 5.2. LAND USAGE AND FUNCTIONALITY

The land parcels upon which the two projects are built were purchased in 2012 and 2013. In total Hydro Ottawa purchased approximately 41 acres for a total price of \$19.5M. The cost of land and acreage is summarized in Table 16 below.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED

Table 16 - Land Cost

Location	Purchase Price	# Acres	\$/Acre
EC - Hunt Club Rd	\$12,694,255	21.08	\$602,194
SC - Dibblee Rd.	\$6,800,443	20.26	\$335,659
Total Land Cost	\$ 19,494,697	41.34	

2

In its 2015 Decision, the OEB made findings based on information that was provided at that time. Subsequent to the proceeding the site design layout and use has changed and there is no developable surplus land at either location, as further explained below. OEB findings at the time were as follows:

7

9

10

'The OEB finds that Hydro Ottawa has not demonstrated the prudence of the \$19 million cost for the 41 acres of land. The land was purchased in 2012 and 2013. The total cost of \$19 million includes 9 acres of excess land valued at \$4 million. The benefit to customers associated with the \$4 million cost of the excess land has also not been explained."

111213

14 15 "The OEB finds the evidence to be inconclusive, suggesting that the purchased land area included a contingency over and above what is required for the New Buildings, by indicating that the "actual land acquisition provides capacity to expand in future, if necessary."²¹

16 17

The 2015 OEB Decision to not approve a portion of the land purchased (\$4M representing approximately 9 acres of land) was based on information contained in a presentation dated November 17, 2014, which was provided by Hydro Ottawa in response to School Energy Coalition interrogatory #11, Attachment B. The rationale for the Decision was that the land was excess to the current needs of Hydro Ottawa and was required to be able to expand in the future if necessary. Subsequent to the presentation produced in response to the interrogatory, both sites have been fully developed to meet current needs and there is no "surplus" land at

 ^{25 21} Ontario Energy Board, Decision on Settlement Proposal and Procedural Order No. 11, EB-2015-0004 (November 23, 2015), pages 3-4.

1 either location. The 41.34 acres purchased is all necessary and is providing value to current

2 Hydro Ottawa customers.

3

The East Campus land area is 21.08 acres and consists of three buildings, parking, material storage, protected natural lands and property set-backs in respect of local planning requirements. The site includes 1.95 acres which could be considered as non-operational. However, the 1.95 acres is used to store "surplus fill" encountered during construction which was not considered clean soils per Ministry of the Environment, Conservation and Parks ("MECP") Guidelines for external off-site disposal. Hydro Ottawa saved in excess of \$700K by keeping these soils on site, which is permitted by MECP guidelines. This area was shaped into a berm at the north east end of the property and there is no environmental risk as the soils were considered contaminated mostly due to the amount of debris (broken concrete, rubble, scrap

14

The East Campus also has a 2.52-acre Solar Field at the north-west section of the property.

This 414 MWh net metering facility supplies electricity to the on-site buildings helping to reduce the consumption from the grid thereby lowering OM&A costs associated with the monthly

18 electricity bill.

metal, etc.) preventing it being disposed off-site as clean fill.

19

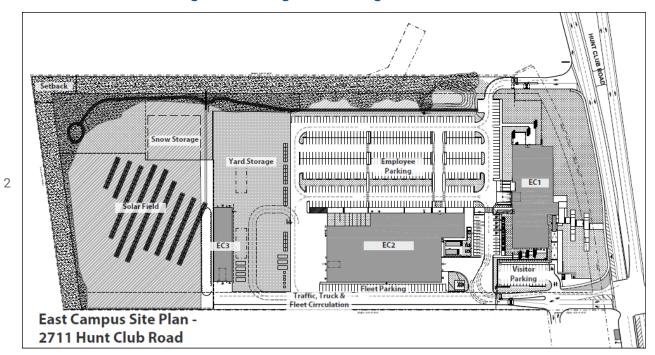

20 Figure 10 below shows East Campus land (21.08 acres) and the current buildings and uses of

21 this site.

Page 52 of 73

Figure 10 – Diagram Showing Use of EC Site

3

1

The South Campus land area is 20.26 acres and consists of one main building which houses office, garage and warehouse facilities. A condition pertaining to the South Campus site is that it is not serviced by municipal infrastructure (water and sewer) and required well water and treatment system and a septic system. The site has the main operational warehouse and equipment yard storage, and a stormwater management facility. There is a 0.76 acre non-operational portion of land at the extreme north-east end of the property. This portion has limited access and it is highly impractical to utilize this portion for future operations, or as it is "landlocked", to sever this portion of land from the main lands.

12

The South Campus also has a 4.2-acre Solar Field at the north-west section of the property.

This 424 MWh net metering facility supplies electricity to the on-site buildings helping to reduce

the consumption from the grid, thereby lowering OM&A costs associated with the monthly

5

6

5.3. PRUDENCY DURING THE PLANNING STAGE

As part of its prudent management strategy, at the early stage of the project, Hydro Ottawa formed a Project Management Team to oversee all day-to-day aspects of the facilities renewal program. This team was comprised of Hydro Ottawa staff, an independent project management firm, verTerra Corp., and an advocate architect/interior designer, HOK Canada, to manage the life-cycle of the project.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 54 of 73

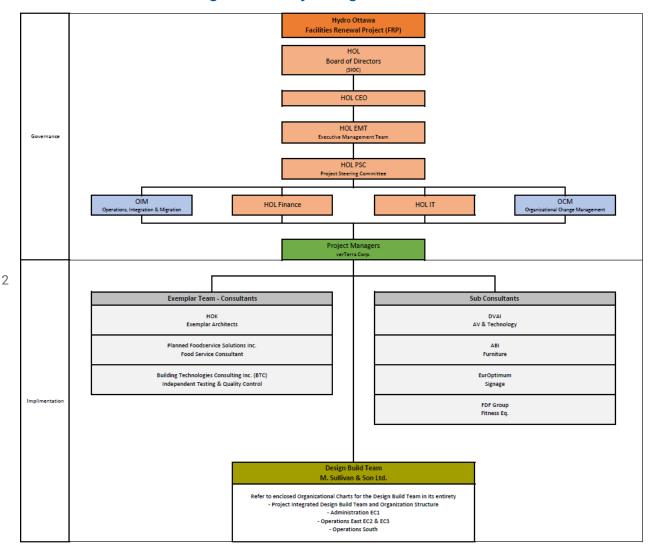

Hydro Ottawa also created various project teams tasked with distinct responsibilities. Project teams were structured to assist Hydro Ottawa with prudent and reasonable decision-making prior and during the planning stage of the new facilities project. The planning stage involved planning and procurement process to select a successful candidate to carry out the execution stage of the project. Hydro Ottawa also retained an independent, third-party Fairness Commissioner who was tasked to oversee and monitor the fairness and transparency of Hydro Ottawa's procurement process. The organization chart in Figure 12 below outlines the various roles and positions that comprised the management structure for the new facilities project. This

9 structure was in place for the planning and execution phases of the project.

1 5.3.1. Project Teams

- 2 In the early stage of the new facilities project, prior to initiating a public tender process, Hydro
- 3 Ottawa formed a project Design Team to provide preliminary design and technical scope
- 4 definitions that outline and convey Hydro Ottawa's requirements. The Design Team also
- 5 participated during the tendering process as a technical adviser to Hydro Ottawa. The Design
- 6 Team was comprised of the following firms:

7

- verTerra Corp. Project Manager and Procurement Advisor
- HOK Architects Corporation Advocate Architect
- R.V. Anderson Civil Engineering
- Cunliffe & Associates Structural Engineering
- Morrison Hershfield Mechanical and Electrical Engineering
- HOK Canada Landscape Architecture, Interior Layouts, Signage and Wayfinding

14

- 15 Hydro Ottawa also formed an Evaluation Team to review, evaluate and select a successful 16 proponent to build the new facilities project. The Evaluation Team consisted of Hydro Ottawa 17 Executive Management members and other staff, the Project Manager, the Advocate Architect
- 18 and Fairness Commissioner.

- 20 Hydro Ottawa engaged an independent procurement advisor to develop the procurement
- 21 strategy for the new facilities project, this advisor also had broader scope responsibilities and
- 22 served as Project Manager. Hydro Ottawa's requirement was to ensure its procurement strategy
- 23 adhered to the industry best practices for publicly tendered construction projects and was
- 24 consistent with the Canadian Construction Association and the Canadian Design Build Institute
- 25 standards for procurement. Additionally, Hydro Ottawa requested that its design build
- 26 procurement structure be based on similar scale design build procurement models successfully
- 27 implemented by the City of Ottawa. The procurement strategy was reviewed and approved by
- 28 the Executive Team and Hydro Ottawa's Board of Directors.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 57 of 73

The Project Manager was verTerra Corp. ("verTerra"), an Ottawa based Project Management and Real Estate Advisory Firm, that brought Design Build, Procurement and Operational Migration expertise to the project. verTerra served as the Owner's Representative to help protect the best interests of Hydro Ottawa during the entire project cycle. Prime areas of responsibility included managing and controlling project scope, budget and schedule. Given that the day-to-day construction of the facilities project was managed by a Design Builder (Sullivan & Son), verTerra assisted with the development of Hydro Ottawa's procurement documentation for the intended Design Build contract. verTerra was part of the Hydro Ottawa Project Team. The Project Team was comprised of Hydro Ottawa staff, verTerra and HOK Canada (HOL's advocate architect and interior designer). This arrangement helped to reduce project risk and maximize project success.

12

13 **5.3.2.** Request for Qualifications & Request for Proposals

A two stage procurement process is standard, where the RFQ provides the technical and qualitative requirements for market respondents to structure their teams and base their responses. An RFQ also provides critical insight into the commercial structure of the opportunity and sets out the expectations for the second RFP stage. The RFQ process also thoroughly assesses the capabilities and strengths of the proposed Design Build teams with the qualifications and requirements of Hydro Ottawa's specific project needs.

20

Hydro Ottawa retained verTerra to help develop a procurement strategy that would adhere to the industry best practices and standards. verTerra confirmed Hydro Ottawa's desire to select a design build contractor for the new facilities project using a two-stage procurement. The first stage was an RFQ, the purpose of which was to invite interested parties to submit RFQ submissions indicating their interest and qualifications to perform and complete the new facilities project. Hydro Ottawa initiated the RFQ stage on August 26, 2015 by posting a nation-wide online public solicitation. The RFQ required interested proponents to submit their design build qualifications and expertise with respect to Hydro Ottawa's specific design criteria and to

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 58 of 73

1 demonstrate and substantiate their design build expertise and capability to execute similar scale

2 and like projects in order to be qualified.

3

Hydro Ottawa received a total of ten RFQ submissions from firms both local and external to the Ottawa market. The RFQ submissions were then evaluated by an Evaluation Team with the assistance of the Design Team. The RFQ evaluation criteria had both Mandatory requirements (e.g. capacity to bond, insurance, financial letter of good standing, etc.) and Qualitative requirements (e.g. design-builder overview and expertise, project references, design-build methodology, etc.). Proponents had to first satisfy the Mandatory requirements to be deemed compliant, and if compliant, were then evaluated against the Qualitative criteria. At the conclusion of the evaluation process, which was witnessed and assessed by the Fairness Commissioner, Hydro Ottawa short-listed the four highest ranking proponents, which were then invited to proceed to the second stage of the procurement process, the Request for Proposals.

14

On May 26, 2016, Hydro Ottawa issued the RFP to the four pre-qualified proponents. The purpose of the RFP was to obtain a fixed tender price for the design build components and evaluate the various design-build proposals for the new facilities project. The RFP stage was a stringent procurement process, and was overseen by the Hydro Ottawa Project Team, Hydro Ottawa Executive Management Team, Supply Chain Management and the Fairness Commissioner. Similar to the RFQ, the RFP consisted of Mandatory requirements that Proponents had to meet in order to be evaluated and also Qualitative requirements. All four pre-qualified proponents submitted responses, met the Mandatory requirements and advanced to the Qualitative evaluations.

24

Each member of the Evaluation Team was required to independently review and score each proponent submission based on the RFP's stipulated criteria and point distribution. Then the Evaluation Team met and developed consensus scoring for each proponent. The consensus sessions were facilitated by Hydro Ottawa's Supply Chain unit and overseen by the Fairness

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 59 of 73

1 Commissioner to ensure fairness and complete objectivity. At the conclusion, Hydro Ottawa 2 selected M. Sullivan and Son ("Sullivan") based in Arnprior Ontario, as the successful proponent 3 ("Design Builder") for the new facilities project. M. Sullivan and Son is a full service general 4 contractor and has been in business for over 100 years. Sullivan submitted the combined best

5 value proposal, having both the best design and the lowest cost.

6

Once the successful proponent was selected, Hydro Ottawa required the Design Builder, on Hydro Ottawa's behalf, to tender most of the work that was required as part of the project. This included civil, mechanical, electrical, landscaping, road/access improvement work, kitchen equipment, signage, etc. To ensure the Design Builder exercised prudent management, verTerra was tasked to oversee that the Design Builder had a minimum of three bidders for each discrete work package and that all sub-trade bidders were pre-qualified by the Design Builder to meet Hydro Ottawa's established safety and quality requirements.

14

Aspects of the project not managed by the Design Builder (e.g. furniture) were tendered on an industry best practice basis, i.e. a minimum of three qualified bidders had to submit their proposals, evaluation and selection by the Project Manager. The Hydro Ottawa Supply Chain unit competitively tendered the necessary technology equipment, which was then integrated into the construction work and managed by verTerra and Sullivan as the design and construction advanced.

21

Hydro Ottawa's procurement process was structured to provide competitiveness and a variety of options from the proponents to ensure the utility was able to make prudent and reasonable decisions. The submitted proposals were subject to a rigorous evaluation process with participation of diverse range of stakeholders tasked with various responsibilities.

26

27 **5.3.3.** Fairness Commissioner and Report

28 The Fairness Commissioner was PPI Consulting Limited. An independent third party

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 60 of 73

1 commissioned by Hydro Ottawa to oversee and monitor each stage of the RFQ/RFP process, to

2 ensure that the process was fair, transparent, and in compliance with stated requirements.

3

4 The Fairness Commissioner's responsibilities included the following, but were not limited to:

5

9

10

11

12

15

16

17

- providing advice on fairness issues concerning the development of the request for
 proposal;
- monitoring and providing advice on potential or real barriers to proponent participation;
 - identifying key issues and potential risks in the procurement process;
 - identifying any situation which may compromise the integrity of the evaluation process (i.e. overseeing the evaluation team and procurement processes and assessing potential bias or undue influence);
- monitoring the evaluation of all submissions to oversee the fair treatment of all proponents;
 - monitoring the adherence of established government procurement practice in the planning, issue, evaluation, and
 - providing a Fairness Report at the conclusion of the evaluation process.

18

The Fairness Commissioner's report was provided to Hydro Ottawa on October 14, 2016, and concluded that "the procurement process for the Facilities Renewal Program Design Build up to the completion of the evaluation process was conducted in a fair, open and transparent

22 manner."

23

24 5.4. PRUDENCY DURING THE EXECUTION STAGE

With the selection of Sullivan as the Design Builder, Hydro Ottawa proceeded to the execution stage, to build the new facilities. Hydro Ottawa created a robust project management and governance structure, which included various levels of project oversight, detailed reporting and cost control. Hydro Ottawa also continued to retain verTerra as a third-party project

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 61 of 73

management expert to provide project support and cost-control management of the new facilities project. Hydro Ottawa's Board of Directors, Strategic Initiatives Oversight Committee of the Board and the Executive Team received regular reports from the Project Team relating to, among other things, project costs and schedule and issues. The project management and governance structure helped to allow Hydro Ottawa senior management to be informed at every step of the project and make prudent decisions as the new facilities project was being constructed.

8

9 5.4.1. Effective Project Management and Governance

Hydro Ottawa structured a robust governance and reporting regime on the new facilities project which was overseen by Hydro Ottawa's Board of Directors and Executive Management Team.

12 The project was managed by the Project Steering Committee.

13

The Executive Management Team provided direct executive management oversight and control on all aspects of the project, including the design build contract, all procurements and all Hydro Ottawa managed scope of work. The Board of Directors provided strategic oversight and governance. The new facilities project was a standing reporting item to Hydro Ottawa's Board of Directors, SIOC, with updates on the project status including budget, schedule, safety, key risks and mitigations.

20

Hydro Ottawa created a Project Steering Committee which was co-chaired by the Chief Financial Officer ("CFO") and Chief Human Resource Officer ("CHRO"). In addition to the Co-Chairs, the Steering Committee included a cross section of Hydro Ottawa staff including managers from all operation divisions, technology, finance, communications and human resources. As the project evolved the Steering Committee created two distinct sub-committees: (i) the Operational Migration Committee ("OCM") chaired by the CFO which dealt with all the operational requirements, and (ii) the Change Management committee chaired by the CHRO which led staff engagement, communications and interior workplace matters. These two

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 62 of 73

- 1 sub-committees were active across the entire duration of the new facilities project ensuring
- 2 compliance with the original specified requirements, and where necessary providing direction to
- 3 the Project Management Team.

4

- 5 verTerra Corp. assigned a full team of Project Management Professionals on the project under a
- 6 Project Director who had direct responsibility over the project and the Project Management and
- 7 Design Build teams. The Project Director directly reported to Hydro Ottawa's CEO, CFO and
- 8 CHRO and Board of Directors.

9

- 10 Hydro Ottawa held quarterly Executive Partnership Meetings with the Design Build Executive
- 11 Management Team, Hydro Ottawa's Project Manager, and Hydro Ottawa's CEO and CFO. The
- 12 purpose of these meetings was to ensure that Hydro Ottawa's Executive Team had oversight
- 13 and understanding of the project status, costs, emerging issues and risks. It also created an
- 14 open line of communication between Hydro Ottawa and the Design Builder.

15

16 **5.4.2.** Project Reporting

- 17 The Design Builder was required to provide highly structured, effective, and regular reporting to
- 18 Hydro Ottawa, at both the senior management and project team levels, for the duration of the
- 19 project. Senior project leadership was required on the part of the Design Builder to lead and
- 20 control the reporting interfaces with Hydro Ottawa and to structure appropriate reporting formats
- 21 and presentations that provide at a minimum, project status and progress on:

2223

- project approvals
- design development

4

5 The new facilities project was reported as follows:

6 7

8

10

11

12 13

14

15

16

17

18

19

- Quarterly reports and presentations made to Hydro Ottawa's Board of Directors, including status, budget, schedule, key risks and opportunities, and a next quarter look ahead.
- Monthly Executive Status reports were provided by the Project Manager, inclusive of project status, work completed last period, budget and changes, schedule, quality, key risks and opportunities, site photographs and next period look ahead.
- Monthly Design Build Reports were submitted by the Design Builder to the Project Manager, inclusive of overall status, sub-trade procurements, budget, schedule, quality, manpower and safety.
- Weekly site reports were provided by the Design Builder to the Project Manager and Hydro Ottawa Executives, including work performed, site photographs, quality and volumetric data, manpower and safety. It is noted that the project was completed without any lost time injuries.

20

21 **5.4.3.** Project Cost Review and Change Order Control

Once the project management and governance structure was established, it was important to constantly monitor project costs and have a stringent process for approval of any deviations from the originally quoted prices. The project total budget was managed by the Project Manager and monthly forecasts were submitted to Hydro Ottawa's CFO, and circulated to the CEO and Board of Directors. The Design Build cost reports were submitted monthly to the Project Manager by the Design Builder, complete with change order and change request forecasts/estimates. Changes to the contract were formalized by the Design Builder with

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 64 of 73

detailed fixed price quotations upon direction by the Project Manager. Hydro Ottawa established a robust, stringent process to ensure that any changes to price were prudent and warranted.

3

4 Prior to a change being submitted for approval changes were first reviewed for accuracy and 5 cost fairness by the Design Builders Design and Engineering teams. The Project Manager 6 would then review the quotation and if deemed fair, certify the recommendation and submit it 7 directly to Hydro Ottawa's CFO for final approval. The CFO and the Project Manager conducted 8 regular change review meetings to review / discuss all submitted changes, review the budget 9 forecast, and if deemed acceptable, the CFO would sign off and a change order would be 10 issued to the Design Builder. The approval process employed by Hydro Ottawa was designed in 11 accordance with and adhered to Project Management Institutes and Canadian Construction 12 Association standard practices.

13

14 **5.4.4.** Payment Control

With respect to payment control, the Design Builder submitted monthly progress payment requests with a complete breakdown of expenditures for the period, including all relevant sub-trade, supply and change order invoices to Hydro Ottawa's Project Manager. All monthly progress payment submissions included a Statutory Declaration from the Design Builder certifying supply payments for the previous period had been made and also included a budget and schedule update. Hydro Ottawa's Project Manager reviewed for compliance with the contract and accuracy to work performed on site, and if acceptable, issued a written recommendation to Hydro Ottawa for payment. This process was compliant with the terms of the contract and adhered to PMI and industry best practices.

24

25 Billing and payment recommendation on all other contracts, outside of the Design Builder 26 contract responsibility, were managed by the Project Manager who acted as payment certifier, 27 verifying payment accuracy and fairness on all other related contracts.

Hydro Ottawa Limited

Page 65 of 73

1 5.4.5. Project Schedule Control

Another important aspect of the prudent management included project schedule control. The project schedule was managed by the Project Manager with a master critical path schedule set as the baseline, inclusive of all project scope of work. The Design Builder also developed a critical path schedule for the design and construction works, which was linked to the Master Project Schedule. The project schedule was reviewed every two weeks in a Project Team meeting and updated monthly. Short term look ahead schedules were provided every two weeks and verified by the Project Manager on site.

9

10 5.5. EXTERNAL BENCHMARKING

11 5.5.1. Benchmarking Other LDCs

- 12 Hydro Ottawa is aware that benchmarking can be a useful measure of project cost performance.
- 13 The associated comparative information on building size, cost and staff levels can be
- 14 informative, however it is not precise. There can be differences in the nature of the projects (e.g.
- 15 new build or refurbishment), location (e.g. urban or rural), land costs (e.g. serviced, un-serviced,
- 16 nominal value) and year built (e.g. inflation) that all have an influence on project cost and
- 17 unitized comparisons.

- 19 Attempts have been made in previous OEB rate-regulated utility Cost of Service proceedings to
- 20 present and compare both administrative office and operations building costs. For example,
- 21 Table 17 summarizes administrative office and operations comparison information in pages 8
- 22 and 9 of the OEB Staff Submission dated March 29, 2019 from the EB-2018-0028 Energy+
- 23 proceeding (with the exception of the last column which has been added to reflect final project
- 24 information for Hydro Ottawa new facilities).

Cost/FTE	\$110,800	\$213,456	\$120,000	\$265,773	\$203,655	\$264,368	\$120,896	\$152,441
Cost/Sq.Ft.	\$301	\$254	\$228	\$301	\$136	\$208	\$370	\$339

2

- 3 These comparisons are not necessarily made on an "apples to apples" basis or with full
- 4 information (e.g. being able to isolate land costs and similar building functions). For example,
- 5 Operations, Warehouse and Storage construction typically costs less than Administrative Office
- 6 space costs, yet the total square footage in the above table is aggregated. Land costs vary
- 7 across comparator LDCs and some are at a nominal value (e.g. Energy +). If land costs are
- 8 removed from Hydro Ottawa, the Cost/Sq.Ft is \$272 which compares favourably to other LDCs
- 9 as shown in Table 18 below.

2

- 3 In order to help benchmark facilities on a comparable basis, information from Table 19 below
- 4 identifies facilities that are strictly Administration and then capital costs are escalated to 2019
- 5 dollars. These results are then compared with Hydro Ottawa's Administrative Office Building.
- 6 This comparison, which reflects escalation for PowerStream and Enersource capital cost is
- 7 presented in Table 19 below.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2

Page 68 of 73

Table 19 – Head Office Admin. Building Costs, PowerStream & Enersource Escalated

	Energy+	PowerStream	Enersource	Hydro Ottawa
	(Southworks)			
OEB Docket	EB-2018-0028	EB-2008-0244	EB-2012-0033	EB-2019-0261
Functions	Admin.	Admin	Admin.	Admin. (EC-1)
In-Service Year	2022	2008	2012	2019
Total Cost	\$8,100,000	\$37,588,900	\$21,114,000	\$52,770,894
Total Sq. Ft.	21,892	92,000	79,000	127,132
FTEs	67	250	150	419
Sq.Ft./FTE	327	368	527	303
Cost/FTE	\$120,896	\$150,356	\$140,760	\$125,945
Cost/Sq.Ft.	\$370	\$409	\$267	\$415

2

3 Costs for PowerStream and Enersource were escalated/normalized using the Statistics Canada

4 Building Construction Price Index. Cost escalation results from this Statistics Canada

information are summarized in Table 20.

6 7

Table 20 – Statistics Canada Building Construction Price Index

	Q1 2008	Q1 2012	Q2 2019	Q2'2019/Q1'2008	Q2'2019/Q1'2012
Toronto	83.0	90.4	108.3	30.5%	19.8%
Ottawa/Gatineau	81.0	93.7	109.9	35.7%	17.3%

8

The 2008 cost of the PowerStream Admin. Building (\$27,700,000) was escalated by 35.7% and the 2012 cost of the Enersource Admin. Building (\$18,000,000) was escalated by 17.3%. The Building Construction Price Index for Ottawa-Gatineau was used to enable a closer comparison to the vintage of a building had it been constructed in the Ottawa area. It is noted that non-residential construction cost escalation in the Ottawa-Gatineau area has been higher than in Toronto over the 2008 to 2019 period (35.7% compared to 30.5%) but lower in the 2012 to 2019 period. The most direct comparison to Hydro Ottawa's building is the PowerStream

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 1
Schedule 1
Attachment A
UPDATED
May 5, 2020
Page 69 of 73

building as it is similar in nature in that it is a new build, primarily administration and does not include operations, garage and warehousing facilities. The PowerStream escalated cost of \$409 sq./ft. is close to the Hydro Ottawa cost of \$415 sq./ft.. Further differences between the PowerStream and Hydro Ottawa cost per sq./ft. would be the price of land but Hydro Ottawa does not have the information needed to remove the land costs from the comparator LDCs. Hydro Ottawa recognizes that while attempting to normalize data through escalation could be helpful in some cases, it does not necessarily result in a meaningful comparisons as there are other factors that create unit cost differences the nature of the project (new build vs. refurbishment, the cost of land and the mix of space (e.g. office / warehouse / garage / operations / storage).

11

With respect to other unitized measures that are not impacted by escalation, it is noted that the
Hydro Ottawa Administrative Office Building, when compared to the other administrative office
buildings in Table 19 above, has the lowest number of Sq. Ft,/FTE (303 Sq.Ft/FTE), reflecting
efficient use of space. Hydro Ottawa also has the lowest Cost/FTE when compared to
PowerStream and Enersource (\$125,945/FTE). The Energy+ Southworks Cost/FTE, while lower
than Hydro Ottawa's, is not directly comparable with Hydro Ottawa Administrative Office
Building as the nature of the Energy+ project is a refurbishment/renovation and the building was
purchased for \$1.²²

- 21 Removing the cost of Hydro Ottawa land from Table 19, results in a Cost of \$372 per Sq. Ft. as
- 22 shown in Table 21 below.

Cost/FTE	\$260,630	\$304,576	\$233,389	\$310,103	\$138,874	\$87,196			
Cost/Sq. Ft.	\$310	\$345	\$156	\$244	\$287	\$180			

3

1

2

4 It is noted that when costs are escalated, Hydro Ottawa's EC-2/EC-3 facilities have the lowest

5 Cost/FTE (\$138,874) and is in the midrange of Cost/Sq.Ft. (\$287). The EC-2/EC-3 facility has

6 the lowest Sq.Ft./FTE result (485) which is significantly lower than all other comparative results

7 - this result is not impacted by escalation. As land prices vary across the Province, Scenario 2

8 removes the cost of land from the Hydro Ottawa Total Cost to provide a clear picture of

9 construction costs, resulting in a Cost/Sq. Ft of \$180. Hydro Ottawa does not have the

10 information needed to remove land costs from the comparator LDCs.

11

12 In order to compare on a current cost basis, costs have been escalated using the Statistics

13 Canada Building Construction Price Index for the relevant In-Service year as per Table 23

14 below.²⁴

2

1

3 Table 24 below compares the South Campus Administration & Operations building to other

4 Administration & Operations buildings identified in Table 18 above.

5

6 It is noted on Table 24 below, that when costs are escalated, Hydro Ottawa's SC-1 facility costs
7 as measured by Cost/FTE and Cost/Sq. Ft. are in the middle of the comparator LDCs. The
8 number of Sq. Ft/FTE is also in the middle of the range. Hydro Ottawa acknowledges that there
9 are a variety of configurations to the mix of Administration and Operations space and also
10 differences in cost between a refurbished facility (e.g. Milton Hydro) and a new build. Also,
11 differences in land values and size will have an impact on comparator costs. As such, a
12 Scenario 2 has been provided which removes the land cost from the SC-1 building in order to

13 provide an indication of direct construction costs.

2 4. SIGNIFICANT IN-SERVICE ADDITIONS

- 3 4.1. HISTORICAL YEARS 2016-2018 AND BRIDGE YEARS 2019-2020
- 4 (UPDATED: HISTORICAL YEARS 2016-2019 AND BRIDGE YEAR 2020)
- 5 The major capital projects that were executed, or are set to be executed, during this period are
- 6 outlined below in Table 5, which has been updated to account for 2019 actuals. Background
- 7 information on these projects can be found in Attachment 2-4-3(E): Material Investments.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 13 of 15

Table 5 – AS ORIGINALLY SUBMITTED – 2016-2020 Overview of Significant In-Service Additions (\$'000,000s)

Description/Type	Project	Cost
Station growth driven by capacity	Merivale MTS Station Renewal	\$15.9
constraints	Richmond South Station Upgrade	\$13.4
Other distribution system expansions/upgrades to provide	Residential, Commercial, System Expansion, and Infill & Upgrade Capital Programs	\$68.7
basic levels of service and supply growing communities	Plant Relocation	\$13.6
	Pole Renewal	\$44.8
Ongoing replacement of existing	Cable Replacement and Renewal	\$29.9
aging distribution system to minimize failure risk	Emergency Renewal	\$34.2
	Critical Renewal	\$11.7
	Fibre Optic Network	\$18.9
Station protection and control	Overbrook SO Station Switchgear Replacement	\$13.3
renewal projects	System Voltage Conversion	\$13.0
	Woodroffe Station Switchgear Replacement	\$11.1
	New Administrative Office and Operations Facilities ⁹	\$79.9
Othor	Enterprise Resource Planning System Upgrade	\$11.3
Other	Customer Care and Billing System Upgrades	\$8.1
	Fleet Replacement ¹⁰	\$6.3

3

2

⁴ Land is excluded. For additional information on this project, please see Attachment 2-1-1(A): New Administrative

⁵ Office and Operations Facilities.
6 Office and Operations Facilities.
10 For additional information, please see Attachment 2-4-3(F): Fleet Replacement Program.

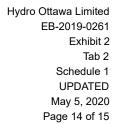

Table 5 – UPDATED FOR 2019 ACTUALS – 2016-2020 Overview of Significant In-Service Additions (\$'000,000s)

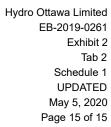

Description/Type	Project	Cost
Station growth driven by capacity	Merivale MTS Station Renewal	\$16.0
constraints	Richmond South Station Upgrade	\$13.1
Other distribution system expansions/upgrades to provide	Residential, Commercial, System Expansion, and Infill & Upgrade Capital Programs	\$75.9
basic levels of service and supply growing communities	Plant Relocation	\$15.5
	Pole Renewal	\$43.3
Ongoing replacement of existing	Cable Replacement and Renewal	\$31.1
aging distribution system to minimize failure risk	Emergency Renewal	\$38.0
	Critical Renewal	\$13.2
	Fibre Optic Network	\$18.7
Station protection and control	Overbrook SO Station Switchgear Replacement	\$13.3
renewal projects	System Voltage Conversion	\$11.9
	Woodroffe Station Switchgear Replacement	\$11.1
	New Administrative Office and Operations Facilities ¹¹	\$79.9
Other	Enterprise Resource Planning System Upgrade	\$11.3
Ottlei	Customer Care and Billing System Upgrades	\$8.1
	Fleet Replacement ¹²	\$6.7

3

- 4 For 2016-2020, Hydro Ottawa is projecting Capital Additions to exceed the overall envelope by
- 5 \$54.1M. After accounting for 2019 actual Capital Additions, Hydro Ottawa is projecting Capital
- 6 Additions to exceed the overall envelope by \$70.4M. Additional details, including a variance
- 7 analysis, are available in **UPDATED** Exhibit 2-4-1: Capital Expenditure Summary.

^{8 11} Land is excluded. For additional information on this project, please see UPDATED Attachment 2-1-1(A): New

⁹ Administrative Office and Operations Facilities.
10 12 For additional information, please see Attachment 2-4-3(F): Fleet Replacement Program.

1 4.2. TEST YEARS 2021-2025

- 2 The major capital projects planned for the 2021-2025 period are outlined below in Table 6.
- 3 Background information on these projects can be found in Attachment 2-4-3(E): Material
- 4 Investments.

5

Table 6 – 2021-2025 Overview of Significant In-Service Additions (\$'000,000s)

Description/Type	Project	Cost
Station growth driven by	Cambrian MTS	\$82.4 ¹³
capacity constraints	New East Station	\$30.714
Other distribution system expansion/upgrade to provide	Residential, Commercial, System Expansion, and Infill & Upgrade Capital Programs	\$67.6
basic levels of service and supply growing communities	Plant Relocation	\$11.0
	Pole Renewal	\$33.7
Ongoing replacement of	Cable Replacement and Renewal	\$40.7
existing aging distribution system to minimize failure risk	Emergency Renewal	\$22.4
	Critical Renewal	\$21.5
	Riverdale TS Station Switchgear Upgrade	\$14.2 ¹⁵
	Fisher Station Rebuild	\$9.6
Station protection and control renewal projects	Bells Corners Rebuild	\$10.3
	Overbrook TO Station Switchgear Replacement	\$7.1 ¹⁶
	Dagmar Station Rebuild	\$6.0
Other	Fleet Replacement ¹⁷	\$16.6
Oulei	Enterprise Resource Planning System Upgrade	\$12.0

⁸ ¹³ Cost includes Connection Cost Recovery Agreement ("CCRA") payments to Hydro One Networks Inc. ("HONI").

^{9 14} Ibid.

^{10 &}lt;sup>15</sup> Cost includes CCRA payments to HONI.

^{11 &}lt;sup>16</sup> *Ibid*.

¹² For additional information, please see Attachment 2-4-3(F): Fleet Replacement Program.

Notes:

- Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.
- The "CCA Class" for fixed assets should generally agree with the CCA Class used for tax purposes in Tax Returns. Fixed Assets sub-components may be used where the underlying asset components are classified under multiple CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- 4 The additions in column (E) must not include construction work in progress (CWIP).
- 5 Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.

		Net Depreciation	-\$ 50,704,193

Notes:

- Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.
- The "CCA Class" for fixed assets should generally agree with the CCA Class used for tax purposes in Tax Returns. Fixed Assets sub-components may be used where the underlying asset components are classified under multiple CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- 4 The additions in column (E) must not include construction work in progress (CWIP).
- 5 Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.

Notes:

- Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.
- The "CCA Class" for fixed assets should generally agree with the CCA Class used for tax purposes in Tax Returns. Fixed Assets sub-components may be used where the underlying asset components are classified under multiple CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- 4 The additions in column (E) must not include construction work in progress (CWIP).
- 5 Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.

Notes:

- Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.
- The "CCA Class" for fixed assets should generally agree with the CCA Class used for tax purposes in Tax Returns. Fixed Assets sub-components may be used where the underlying asset components are classified under multiple CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- The additions in column (E) must not include construction work in progress (CWIP).
- 5 Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.

Notes:

- Tables in the format outlined above covering all fixed asset accounts should be submitted for the Test Year, Bridge Year and all relevant historical years. At a minimum, the applicant must provide data for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.
- The "CCA Class" for fixed assets should generally agree with the CCA Class used for tax purposes in Tax Returns. Fixed Assets sub-components may be used where the underlying asset components are classified under multiple CCA Classes for tax purposes. If an applicant uses any different classes from those shown in the table, an explanation should be provided. (also see note 3).
- 3 The table may need to be customized for a utility's asset categories or for any new asset accounts announced or authorized by the OEB.
- 4 The additions in column (E) must not include construction work in progress (CWIP).
- 5 Effective on the date of IFRS adoption, customer contributions will no longer be recorded in Account 1995 Contributions & Grants, but will be recorded in Account 2440, Deferred Revenues.
- The applicant must ensure that all asset disposals have been clearly identified in the Chapter 2 Appendices for all historic, bridge and test years. Where a distributor for general financial reporting purposes under IFRS has accounted for the amount of gain or loss on the retirement of assets in a pool of like assets as a charge or credit to income, for reporting and rate application filings, the distributor shall reclassify such gains and losses as depreciation expense, and disclose the amount separately.

6

7 2. WORKING CAPITAL PERCENTAGE

- 8 As part of Hydro Ottawa's 2016-2020 rate application, the OEB approved a yearly WCA
- 9 percentage. The utility's approved 2016-2020 WCA percentages are shown in Table 1 above.

- 11 UPDATED Exhibit 2-1-1: Rate Base Overview incorporates the OEB's default WCA percentage
- 12 of 7.5%, as outlined in the updated version of Table 3 above, for 2021-2025 working capital
- 13 requirement included in Hydro Ottawa's 2021-2025 rate base.

^{14 5} Totals may not sum due to rounding.

^{15 &}lt;sup>6</sup> Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 4 of 12

1 3. OPERATIONS, MAINTENANCE AND ADMINISTRATION

- 2 For more details on the OM&A expenses used in Table 1 above, please see **UPDATED** Exhibit
- 3 4-1-1: Operations, Maintenance and Administration Summary.

5 4. CALCULATION OF POWER SUPPLY EXPENSE

- 6 The billing determinants underpinning the estimated Power Supply Expense use the forecasted
- 7 monthly purchased kWh and peak kW produced by the load forecast described in UPDATED
- 8 Exhibit 3-1-1: Load Forecast. The forecast calculation for commodity expense is detailed in
- 9 Appendix 2-Z, in the following attachments:
- 10

- UPDATED Attachment 2-3-1(A): OEB Appendix 2-Z 2021 Commodity Expense
- **UPDATED** Attachment 2-3-1(B): OEB Appendix 2-Z 2022 Commodity Expense
- UPDATED Attachment 2-3-1(C): OEB Appendix 2-Z 2023 Commodity Expense
- UPDATED Attachment 2-3-1(D): OEB Appendix 2-Z 2024 Commodity Expense
- UPDATED Attachment 2-3-1(E): OEB Appendix 2-Z 2025 Commodity Expense
- 16
- 17 UPDATED Attachment 2-3-1(F): 2021-2025 Cost of Power provides the complete Power Supply
- 18 Expenses for the 2021-2025 period, as described within this Schedule. There are slight no
- 19 variances in the annual commodity expense in **UPDATED** Attachments (A) through (E) and
- 20 UPDATED Attachment (F) due to rounding differences. Table 4, as updated below, outlines the
- 21 estimate of annual cost of power expenditures for 2021-2025.

4 Figure 1 below, as originally submitted, illustrates Hydro Ottawa's annual cost of power expense

5 from 2015-2025. Annual amounts from 2015-2018 are Historical, 2019-2020 are Bridge Years,

and 2021-2025 have been forecasted as described in the subsections of this Schedule. The

decrease in annual power supply expenditures from 2016-2019 can be attributed to the impacts

from the Ontario Fair Hydro Plan Act, 2017 ("Fair Hydro Plan").

The updated version of Figure 1 below illustrates Hydro Ottawa's annual cost of power expense

from 2015-2025. Annual amounts from 2015-2019 are Historical, 2020 is Bridge Year, and

2021-2025 have been forecasted as described in the subsections of this Schedule. The

decrease in annual power supply expenditures from 2016-2019 can be attributed to the impacts

14 from the Fair Hydro Plan.

¹⁵ Totals may not sum due to rounding.

1 Figure 1 – AS ORIGINALLY SUBMITTED – Cost of Power Expense 2015-2025 (\$'000,000s)

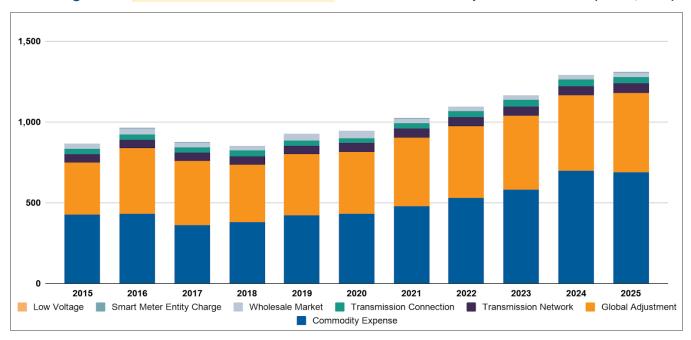

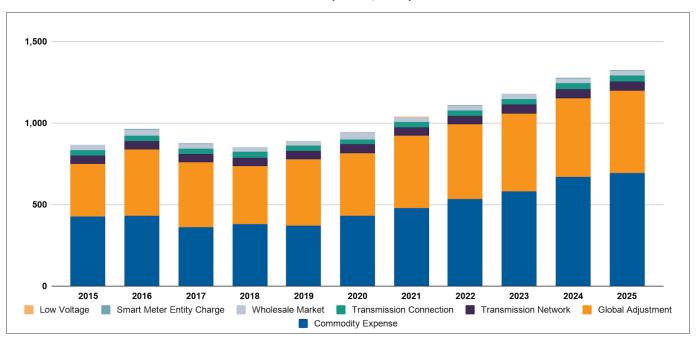

Figure 1 – UPDATED FOR 2019 ACTUALS – Cost of Power Expense 2015-2025

(\$'000,000s)

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 8 of 12

1 4.1. COMMODITY EXPENSE AND GLOBAL ADJUSTMENT

2 As per the OEB's Chapter 2 Filing Requirements for Electricity Distribution Rate Applications, as

3 updated on July 12, 2018 and addended on July 15, 2019, Hydro Ottawa has completed

4 Appendix 2-Z: Commodity Expense for 2021-2025.

5

Effective November 1, 2019, the provisions of the Fair Hydro Plan under which the OEB had been setting Regulated Price Plan ("RPP") prices was repealed. The OEB has since set RPP prices which more closely reflect the actual cost of supply. Hydro Ottawa has followed the direction OEB staff provided to Kingston Hydro Corporation in the follow-up questions for its 2020 Custom Incentive Rate-Setting ("Custom IR") Annual Update (EB-2019-0048). On November 1, 2019, OEB staff updated Appendix 2-Z to accommodate the changes to the supply cost calculation. These changes consist of the following: the amount for the Global Adjustment Modifier has been removed from the calculation; the non-RPP Actual kWh have not been split between customers eligible for the Global Adjustment modifier and non-eligible customers; and the adjustment to address bias towards unfavourable variance has only been applied to RPP

1617

price forecast.

As originally submitted, Hydro Ottawa has used 2018 Actual kWh and split each class by RPP and non-RPP and Class A and Class B customers to determine the percentage shares for the calculation of weighted average forecasted commodity expense. In accounting for 2019 actuals, the utility has subsequently updated its calculations to incorporate 2019 Actual kWh. The kWh for Class A customers who opted-in July 2019 have been annualized and the number of customers kept consistent. The RPP Supply Cost Summary from the OEB's most recent Regulated Price Plan Report has been used to determine the 2020 forecast commodity price. For 2021-2025, Hydro Ottawa has used residential and commercial factors derived from

- 1 Ontario's 2017 Long Term-Energy Plan¹³ ("LTEP") to estimate the RPP, Global Adjustment, and
- 2 Hourly Ontario Energy Price ("HOEP"), as described below.

4 4.1.1. Estimated RPP Price

- 5 The commodity price for RPP customers was calculated by using the OEB's Regulated Price
- 6 Plan Report. The RPP rate of \$128.03/MWh was multiplied by a yearly residential factor derived
- 7 from the LTEP to arrive at a yearly RPP commodity rate for 2021-2025. Table 5 provides the
- 8 estimated RPP price for 2020-2025.

9

Table 5 – Estimated RPP Price (kWh)

2020	2021	2022	2023	2024	2025
\$0.12803	\$0.13203	\$0.14203	\$0.15204	\$0.16404	\$0.17104

11

12 4.1.2. Estimated Global Adjustment

- 13 The most recent Global Adjustment rate of \$106.94/MWh from the Regulated Price Plan Report
- 14 was multiplied by a commercial factor derived from the LTEP to arrive at a yearly Global
- 15 Adjustment rate for 2021-2025. Please see Table 6 below for the yearly rates.

16 17

Table 6 – Estimated Global Adjustment (kWh)

2020	2021	2022	2023	2024	2025
\$0.10694	\$0.10949	\$0.11458	\$0.12094	\$0.12222	\$0.12986

18

19 4.1.3. Estimated HOEP

- 20 For 2021-2025, the estimated HOEP rate has been calculated by taking the estimated annual
- 21 Average Supply Cost for RPP customers and subtracting the annual estimated Global
- 22 Adjustment and adjustment to address bias towards unfavourable variance. Table 7 identifies
- 23 the estimated HOEP prices for 2021-2025.

. .

²⁴ ¹³ Ministry of Energy, *Ontario's Long-Term Energy Plan 2017: Delivering Fairness and Choice* (2017), pages 28-30.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 10 of 12

Table 7 – Estimated HOEP (kWh)

2020	2021	2022	2023	2024	2025
\$0.02009	\$0.02154	\$0.02645	\$0.03009	\$0.04082	\$0.04018

3 4.1.4. Estimated Weighted Average Commodity Price

As originally submitted, Hydro Ottawa calculated the weighted average commodity price from the percentage shares of RPP and non-RPP derived from the allocation of the non-loss-adjusted 2018 Actual kWh for 2021-2025. In accounting for 2019 actuals, the utility has subsequently updated its calculations to incorporate 2019 Actual kWh. The annual forecasted loss-adjusted kWh purchases by class were multiplied by the annual weighted average forecasted commodity price. Table 8 shows the estimated weighted average commodity price for 2021-2025.

11 12

13

17

1

2

Table 8 – Estimated Weighted Average Commodity Price (kWh)

2020	2021	2022	2023	2024	2025
\$0.1235	\$0.13160	\$0.1416	\$0.1516	\$0.1636	\$0.1706

14 4.2. WHOLESALE EXPENSE

15 The Wholesale Market Charge is calculated by multiplying the total kWh purchased by the 2019 16 approved rate of \$0.0039/kWh for all years.

18 4.3. TRANSMISSION EXPENSE

The forecasted kW monthly coincident peak is multiplied by historic percentages for each transmission charge to establish the kWs for those charges. These calculations have been updated to incorporate 2019 Actual percentages. Table 9 below outlines the yearly rates calculated for Hydro One Networks Inc. ("HONI") Retail Transmission Service Rates ("RTSRs") and Uniform Transmission Rates ("UTRs").

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 3 Schedule 1 **UPDATED** May 5, 2020 Page 11 of 12

Table 9 – Retail Transmission Service & Uniform Transmission Rates (\$/kW)

	2020	2021	2022	2023	2024	2025
RTSR - Network Service	\$3.3980	\$3.3980	\$3.4507	\$3.5042	\$3.5585	\$3.6137

UTRs - Transformation Connection	\$2.33	\$2.33	\$2.38	\$2.43	\$2.48	\$2.53

2

1

3 **4.3.1**. **HONI Transmission Rates**

- 4 For 2021, the kWs have been multiplied by the 2020 OEB-approved HONI RTSRs. 14 Hydro
- 5 Ottawa has increased the transmission rates for 2022-2025 based on the inflationary method as
- 6 described in the proceeding before the OEB involving HONI's most recent Custom IR
- 7 Distribution Rate Application. 15 RTSR rates for 2021 and 2022 have been revised in UPDATED
- 8 Attachment 2-3-1(F): Cost of Power 2021-2025.

9

Uniform Transmission Rates 10 **4.3.2.**

- 11 For 2021, the kWs have been multiplied by the 2020 Interim UTRs. 16 Hydro Ottawa has
- 12 increased the transmission rates for 2022-2025 based on the 2020 OEB-approved inflationary
- 13 factor.

14

LOW VOLTAGE CHARGES

- 16 To estimate the expense for 2021, historical kW values for Low Voltage and Common Sub
- 17 Transmission Line ("Common ST Lines") have been multiplied by the 2020 OEB-approved

¹⁸ Ontario Energy Board, *Decision and Order*, EB-2019-0043 (December 17, 2019), Schedule A, page 8.

^{6 *}High Voltage Distribution Station

7

8 4.5. SMART METERING ENTITY CHARGE

- 9 On March 1, 2018, the OEB approved a Smart Metering Entity charge of \$0.57 per Residential
- 10 and General Service <50 kW customer for the period January 1, 2018 to December 31, 2022.18
- 11 This rate has been used for 2021-2025, without adjustment for inflation. As per the OEB
- 12 decision, Hydro Ottawa has used the most recent OEB Yearbook count for Residential and
- 13 General Service <50 kW customers to calculate the annual expense. The revenue has been
- 14 derived based on the monthly load forecast.

15

16 4.6. LOW VOLTAGE SWITCHGEAR CREDIT

- 17 Power Supply Expenses were adjusted to reflect the Low Voltage Switchgear credit which
- 18 Hydro Ottawa receives as a result of owning the low voltage switchgear at certain stations.

^{19 17} Ontario Energy Board, *Decision and Order*, EB-2019-0043 (December 17, 2019), Schedule A, page 8.

UPDATED CAPITAL EXPENDITURE SUMMARY

2

1

3 1. INTRODUCTION

4 The capital expenditure plan for the 2021-2025 period details the system investments planned

- 5 by Hydro Ottawa utilizing the asset management and capital expenditure planning process
- 6 outlined in Exhibit 2-4-3: Distribution System Plan. Expenditures are planned in the following
- 7 OEB-defined categories: System Access, System Renewal, System Service, and General Plant.
- Backgright Table 1 provides a summary of these expenditures for 2021-2025. Updates to capital
- 9 expenditures in 2021 and 2022 are the result of the updated MiGen project, as described in the
- 10 updates to section 2.3.3 of Attachment 2-4-3(E): Material Investments.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 2 of 21

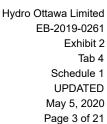

1 UPDATED Attachment 2-4-3(A): OEB Appendix 2-AA - Capital Programs Table and UPDATED 2 Attachment 2-4-3(B): OEB Appendix 2-AB - Capital Expenditure Summary provide an overview 3 of Hydro Ottawa's capital programs and expenditures, respectively. For comprehensive 4 explanatory notes and variance analyses of Hydro Ottawa's capital expenditures, please refer to 5 section 8 of Exhibit 2-4-3: Distribution System Plan.

6

The utility's 2016-2020 capital plan represented the highest level of average annual capital expenditures in any multi-year rate term in Hydro Ottawa's history. Capital spending during this period has focused on the enhancement of system capacity to keep pace with growth and shifts in loads within the service territory, as well as renewal of the aged and aging infrastructure at risk of failure. Key accomplishments have included the following: extensive replacements and enhancements of core infrastructure, such as overhead power lines and underground cables; upgrades to fibre optic networks; acquisition of a new Supervisory Control and Data Acquisition System ("SCADA"); and asset relocations and expansions to support major local infrastructure projects, such as the City of Ottawa's Light Rail Transit and renewal of north-south arteries in the downtown core. These and other initiatives have translated into improved system reliability and performance, with the utility having consistently met or exceeded its reliability targets over the 2016-2019 timeframe. Hydro Ottawa is on track to successfully complete its plan for 2016-2020, with adjustments for typical changes and evolving circumstances.

20

Notwithstanding this progress, however, renewing Hydro Ottawa's aged and aging infrastructure in deteriorating condition (i.e. stations, and underground and overhead systems) at an appropriate pace remains a priority for both near-term performance and long-term sustainability of the distribution system. Hydro Ottawa's service territory continues to be characterized by both a growing and a shifting customer base. In terms of growth, expanding suburban areas and load intensification in established communities are driving a need for investments to maintain reliability, increase supply capacity, and reduce the frequency and duration of outages. At the same time, as customer priorities and needs evolve with the advancement of technology and innovation, they are triggering discernible shifts: in patterns of supply and demand, in

1 preferences with regards to the availability of information on the services received by 2 customers, and in expectations for how quickly and effectively Hydro Ottawa can restore service 3 when an outage occurs.

4

These pressures and priorities are reflected in the top four drivers of the utility's planned expenditures for 2021-2025: Customer Service Requests, Failure Risk, System Capital Investment Support, and Capacity Constraints. Many programs under the System Access investment category are driven by Customer Service Requests, including expansion of the distribution system, residential connections, commercial connections, and generation connections. Assets that are being replaced due to Failure Risk in the System Renewal investment category include the following: station transformers, station switchgear, protection and control ("P&C") equipment, batteries, poles, overhead ("OH") switches, cables, civil structures, and underground ("UG") switchgear. Projects driven by System Capital Investment Support include capital contributions to intangible assets purchased from Hydro One Networks Inc. ("HONI") in conjunction with Hydro Ottawa's major station projects, especially the new Cambrian Municipal Transformer Station ("MTS") and the New East Station. (Additional information on Cambrian MTS is presented in section 3 below). Projects driven by Capacity Constraints likewise include construction of the aforementioned stations as well as associated distribution work to bring additional capacity to growth pockets.

20

The updated version of Figure 1 shows annual capital expenditures for both the 2016-2020 and 22 2021-2025 periods.

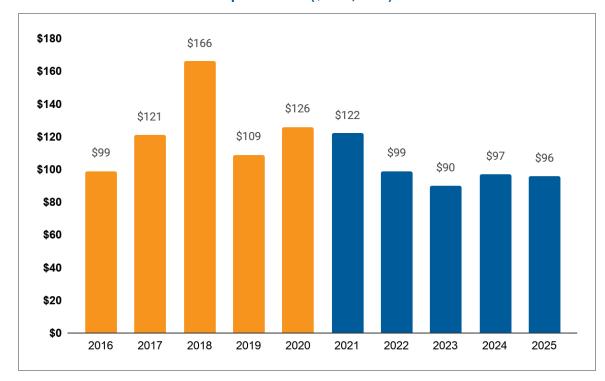

_

²³ The previous project name for Cambrian MTS was South Nepean MTS.

Figure 1 – UPDATED FOR 2019 ACTUALS – Summary of 2016-2025 Annual Capital Expenditures (\$'000,000s)

5 Figure 1 corroborates the expectation signalled in Hydro Ottawa's previous rebasing application

6 that a historically high level of annual capital expenditures "will be sustained, if not increased,

7 through the decade from 2020-2030."2

8

4

1

3

9 Both the 2016-2020 and the 2021-2025 periods contain large generational projects – most 0 notably, the Facilities Renewal Program in the 2016-2025 period and the Cambrian MTS project

in the 2021-2025 period.³ The updated version of Figure 2 below shows a summary of capital

12 expenditures excluding these two projects. Of note, the spike in expenditures in 2018 was due,

13 in part, to three major severe weather events, not the least of which were the six tornadoes that

¹⁴ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-Setting Distribution Rate Application*, EB-2015-0004 (April 29, 2015), Exhibit A-2-1, page 10.

¹⁷ Administrative Office and Operations Facilities; for Cambrian MTS, please see Attachment 2-4-3(E): Material

¹⁸ Investments.

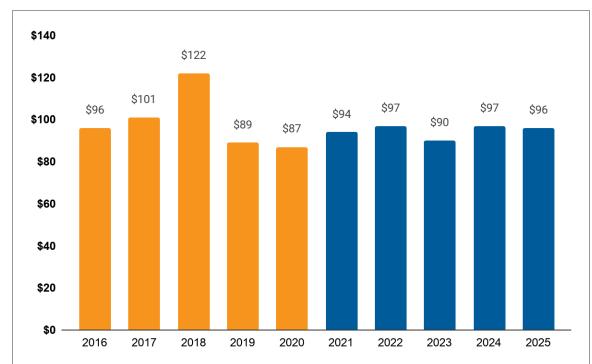

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 6 of 21

touched down in the Ottawa area in September of that year. Additional contributing factors for the 2018 increase included the acceleration of dark fibre installation and increased System Access demands, including those associated with projects at the Canada Science and Technology Museum and a new fulfillment centre constructed by Amazon in the eastern outskirts of Ottawa.

5 2. RATIONALIZATION PROCESS

4

8

12

6 Hydro Ottawa undertook an extensive rationalization process as a prerequisite to formulating 7 the 2021-2025 capital expenditure levels that are summarized in this Schedule.

9 The first step in this process was the development of an asset needs forecast. This forecast

- identified investment levels that were deemed to be necessary from an engineering point of
- view, taking into account asset age, safety, and reliability considerations.
- 13 Thereafter, a more comprehensive review was performed that assessed the following factors:
- 14 asset needs; safety; reliability; customer growth; resource constraints; expected rate impacts;
- 15 customer input; financial considerations; and resourcing considerations.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 **UPDATED** May 5, 2020 Page 8 of 21

1 This review resulted in a reduction in the capital expenditure forecast of approximately \$50M per 2 year. The expenditure levels presented in this Application represent the end product of this 3 assessment and rationalization process, and are consistent with OEB-approved levels from the 2016-2020 period. The resulting "average run rate" of approximately \$100.7M per year 5 represents the expenditure levels required to ensure the safety and reliability of the system, and to address challenges associated with aging infrastructure and customer growth. After adjusting 7 for 2019 actual capital expenditures and updates to the MiGen project as described in the updated version of section 2.3.3 of Attachment 2-4-3(E): Material Investments, the resulting "average run rate" has been updated to \$100.8M per year.

10

2021-2025 CAPITAL EXPENDITURES SUMMARY 3. 11

Detailed justification for the projects and programs that comprise Hydro Ottawa's overall capital investment plan for 2021-2025 are outlined in Exhibit 2-4-2: Capital Expenditure Details and Exhibit 2-4-3: Distribution System Plan.

15

16 As mentioned above, capital expenditures in this period include the construction of Cambrian MTS. This project consists of two distinct components: (1) the new MTS set to be constructed by Hydro Ottawa; and (2) upgrades to existing transmission facilities, as well as construction of a segment of new transmission line, by HONI. These facilities are required to accommodate customer load growth and increase supply capacity in the South Nepean area of Ottawa, which has already reached the limits of local transformation capacity. Seeing as this project is driven by the needs of Hydro Ottawa and its customers, the bulk of the costs are being apportioned to Hydro Ottawa. In October 2019, the OEB granted formal approval to HONI and Hydro Ottawa to proceed with construction of their respective segments of this project. The utilities had applied 25 for leave to construct ("LTC") authorization, pursuant to Section 92 of the Ontario Energy Board 26 Act, 1998 in May 2019.⁴ The project is set to be energized in Q2 2022.

²⁷ The case number of the proceeding in which the OEB adjudicated HONI and Hydro Ottawa's joint application is 28 EB-2019-0077.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 9 of 21

- 1 The sizeable Connection Cost Recovery Agreement ("CCRA") payments associated with this
- 2 project will exert significant influence on the overall capital spending envelope for 2021-2025.
- 3 Projects of this magnitude are not undertaken on a regular basis, and as such, the larger capital
- 4 expenditures in the 2021-2022 period are something of an anomaly.

6 Similar to Figure 2 above, Table 2 shows the planned capital expenditures for 2021-2025 with 7 and without the Cambrian MTS project. In the absence of this project, annual average 8 expenditures for the five-year rate term are \$94.7M. This figure is more representative of typical 9 capital expenditure requirements for a period of this length. After adjusting for 2019 actual 10 capital expenditures and updates to the MiGen project as described in updates to section 2.3.3 11 of Attachment 2-4-3(E): Material Investments, the annual average expenditures for the five-year 12 rate term is determined to be \$94.8M.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 10 of 21

With regards to productivity and continuous improvement, it should be noted that these remain firmly embedded in Hydro Ottawa's capital expenditure program. As an example, the utility has committed to adopt the ISO 55000 Asset Management Standard as part of continual improvement in asset management practices. This asset management framework strengthens the strategic asset decision-making processes by striving to do the following: balance the weighting of cost, risk, and asset performance that meet or exceed service level expectations of customers; comply with the terms of applicable acts, licences, and codes; improve asset value and resource efficiency; and minimize health, safety, and environmental impacts. Other planned productivity initiatives for the 2021-2025 period include performing detailed analysis of field crew wrench time and identifying opportunities for further optimization, implementing seasonal construction shifts, and rationalizing fleet assets. Additional information on these and other activities is available in Exhibit 1-1-13: Productivity and Continuous Improvement Initiatives.

13

14 4. 2021-2025 CAPITAL ADDITIONS SUMMARY

Hydro Ottawa's Capital Additions over the 2021-2025 period are summarized in Table 3 below.
Consistent with the arrangement set forth in the Approved Settlement Agreement governing the utility's 2016-2020 rate plan, Hydro Ottawa proposes to track capital additions in the following

three categories: System Access; System Renewal and System Service, and General Plant.⁵

19

In addition, Hydro Ottawa is requesting to continue the separate deferral account for the revenue requirement related to CCRA payments. This account would include both new facilities as well as true-up payments required by HONI for existing facilities. Hydro Ottawa is also requesting to maintain the variance account (with some modifications) to record the revenue requirement impact associated with any underspending between actual and forecasted cumulative capital additions. For more information on these accounts, please see Exhibit 9-2-1: New Deferral and Variance Accounts. The updated version of Table 3 below reflects 2019 actuals and updates to the MiGen project, as described in the updated version of section 2.3.3

²⁸ ⁵ The System Renewal and System Service categories have been merged into one category to reflect Hydro

Ottawa's standard operating practice to shift funds between the two categories, as warranted by customer and operational requirements.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 11 of 21

- of Attachment 2-4-3(E): Material Investments. In addition, revisions have been made to Table 3
- 2 to correspond with the originally submitted versions of 2021-2025 Appendix 2-BA: Fixed Asset
- 3 Continuity Schedule, filed as Attachments 2-2-1(F)-(J), respectively.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 12 of 21

1 5. 2016-2020 CAPITAL ADDITIONS SUMMARY

- 2 For the 2016-2020 period, Hydro Ottawa is set to maintain in-service addition levels somewhat
- 3 above the levels approved by the OEB. As shown in Table 4 below, the in-service additions in all
- 4 three investment categories are set to exceed approved amounts. For 2016-2020, Hydro
- 5 Ottawa is projecting Capital Additions to exceed the overall envelope by \$54.1M. After adjusting
- 6 for 2019 actual Capital Additions, the utility is projecting Capital Additions to exceed the overall
- 7 envelope by \$70.4M.

TOTAL CAPITAL ADDITIONS VARIANCE	\$7,824	\$15,088	\$8,236	\$62,956	\$(24,061)	\$70,448			

4 System Access has the largest variance, with the level of third-party demand exceeding

5 projections, including from such projects as the City of Ottawa's Light Rail Transit, the Canada

6 Science and Technology Museum, Elgin Street Renewal, and construction of an Amazon

11

The Facilities Renewal Program and new CCRAs are excluded, as per the Approved Settlement Agreement,
 EB-2015-0004 (December 7, 2015).

⁸ EB-201 9 ¹⁰ *Ibid*.

^{10 &}lt;sup>11</sup> *Ibid*.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 15 of 21

1 distribution warehouse. The mix of the programs also changed from the original forecast.

2 System Expansion and Infill, which in general have lower contributions, exceeded the budget

3 expectation. This explains the capital contributions which were lower than budgeted. All of these

projects were third-party driven and were therefore ones which Hydro Ottawa had an obligation

5 to complete.

6

As submitted in the utility's original Application, System Renewal and System Service are set to exceed approved levels by 4% mainly on account of Emergency Renewal spending (both emergency and storm restoration capital and critical renewals). After adjusting for 2019 actual spending, System Renewal and System Service are set to exceed approved levels by 6%. The Ottawa area experienced multiple extreme weather events of significance during the 2016-2020 timeframe, especially in 2018 which featured an ice storm in April, a wind storm in May, and six tornadoes in September. All of these events resulted in the utility incurring a large amount of unbudgeted capital replacement costs.

15

With respect to critical renewals, over the past few years Hydro Ottawa has increased asset inspections as part of its reliability improvement program. Increased inspections have led to more assets being identified as being in a "critical state." "Critical state" means that the assets have been identified as having "functionally" failed, but have not yet caused an outage (e.g. poles that have been deemed to have deteriorated to a point where they no longer meet their designed strength requirements). Critical renewal is more cost-effective than emergency renewal when there is a power outage, as critical renewals can be performed in a planned manner with no accompanying need to incur overtime costs.

24

The amount for General Plant Capital Additions, as shown in Table 4 above, is in accordance with the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rate plan. Both the Facilities Renewal Program and new CCRAs are removed for purposes of the Capital Variance Account, as they are recorded in separate Deferral and Variance Accounts. General Plant is set to exceed approved levels largely on account of the following: (i) true-up CCRA

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 16 of 21

- 1 payments to HONI¹²; and (ii) scope change in several projects, including the Enterprise
- 2 Resource Planning ("ERP") upgrade. A new Human Resources software module (Workday) was
- 3 added to the ERP JDE 9.2 upgrade project. This module has helped lead to reduced processes,
- 4 increased employee self-service capabilities, and enhanced productivity.

5

6 6. 2016-2020 CAPITAL EXPENDITURES SUMMARY

- 7 Similar to section 5 above, for the 2016-2020 period Hydro Ottawa's capital expenditures in all
- 8 three investment categories are set to exceed the budget plan. As <mark>submitted in the utility's</mark>
- 9 original Application, as shown in Table 5, the utility is projecting an overall variance of \$83.4M.
- 10 After adjusting for 2019 actual capital expenditures, Hydro Ottawa is projecting an overall
- 11 variance of \$89.6M.

_

¹² As per the Approved Settlement Agreement, the separate deferral account for CCRA payments is intended to

¹³ facilitate recovery of costs from customers for the annual revenue requirement impact of CCRA payments paid to

¹⁴ HONI, commencing in the year in which the facilities to which each CCRA payment relates provide services to Hydro

¹⁵ Ottawa customers.

3

¹ The projected System Access capital expenditure variance <mark>(as submitted in the utility's original</mark>

⁵ Application) of \$30.7M over the five years is in line with the capital additions variance of \$29.2M

⁶ under section 5 above. After adjusting for 2019 actual System Access capital expenditures, the

⁷ variance of \$37.2M over the five years is in line with the capital additions variance of \$39.2M

⁸ under section 5 above. The variance is explained by increased third-party demand and lower

⁹ capital contributions due to the mix of projects.

^{10 &}lt;sup>14</sup> Approved capital expenditures for 2016-2020 equate to those submitted, the \$10M settlement reduction was

¹¹ applied to capital assets only

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 19 of 21

1 System Renewal and System Service capital expenditures are projected to only exceed budget 2 by 2%, largely on account of higher Emergency Renewal than planned and historical levels

3 associated with the 2018 extreme weather events.

4

The projected variance for General Plant capital expenditures is \$46.3M. After adjusting for 2019 actual General Plant capital expenditures, this variance has been updated to \$46.8M. This is larger than the capital addition variance of \$11.5M (updated to \$14.1M for 2019 actual capital additions) in Table 4 above primarily because the Facilities Renewal Program and HONI CCRA payments are not displayed in Table 4, in accordance with the Capital Variance Account that was approved for use as per the Decision rendered by the OEB on Hydro Ottawa's 2016-2020 rate application. Total CCRAs for new service and true-up payments are projecting \$50.4M over 2016-2020, as originally submitted. After adjusting for 2019 actuals, total CCRAs for new service and true-up payment associated with Cambrian MTS. The CCRAs are significantly higher than historical spending and are set to exceed the budget of \$24.6M by \$25.8M. After accounting for 2019 actuals, CCRAs are set to exceed the budget of \$24.6M by \$25.1M.

17

The projects that led to these overages were carefully monitored by Hydro Ottawa. It was determined that proceeding with these projects was a sound business decision and was in the best interests of customers. Other projects in the utility's portfolio were delayed in an attempt to ameliorate these overages and lessen their impact. For example, some work at Riverdale TS, Overbrook TS, Bayswater DS, and Bells Corners DS was delayed.

23

Hydro Ottawa's new operations and administrative facilities were completed in 2019. As part of its Decision and Order on Hydro Ottawa's 2016-2020 rate application, the OEB concluded that the need for the facilities had been established. During the settlement process for that application, all intervenors and OEB staff accepted the proposed project cost of \$92.5M identified by Hydro Ottawa. Ultimately, the OEB approved \$66.0M in "provisional funding" for the

^{29 15} Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 20 of 21

- 1 facilities, with any additional amounts being subject to a prudency review at the utility's next
- 2 rebasing.¹⁷ Hydro Ottawa has filed evidence in this Application to support its expenditures on
- 3 these new facilities (UPDATED Attachment 2-1-1(A): New Administrative Office and Operations
- 4 Facilities).

5

6 7. APPENDICES AND SPECIAL STUDIES

- 7 Attached to Exhibit 2-4-3: Distribution System Plan are the capital expenditure-related
- 8 appendices that electricity distributors must submit, pursuant to the Chapter 2 and Chapter 5
- 9 Filing Requirements for Electricity Distribution Rate Applications, as updated on July 12, 2018
- 10 and addended on July 15, 2019. In addition, a number of special studies to support Hydro
- 11 Ottawa's proposed capital expenditure plan and rate base levels for the 2021-2025 period are
- 12 likewise attached.

13

14 These appendices and special studies are as follows:

15

UPDATED DISTRIBUTION SYSTEM PLAN ATTACHMENTS

2

1

- 3 Hydro Ottawa's 2021-2025 Distribution System Plan ("DSP") is included in this Application as
- 4 Exhibit 2-4-3. While the updates being made to this Application for purposes of incorporating
- 5 2019 actuals include certain updates to Exhibit 2-4-3, Hydro Ottawa is opting to forego re-filing
- of the Exhibit in its entirety for a few reasons.

7

- 8 First, the updates are very limited in their scope and number. What's more, both the length and
- 9 electronic file size of Exhibit 2-4-3 are significant. Hydro Ottawa is therefore of the view that
- 10 wholesale re-filing of the Exhibit would frustrate, rather than facilitate, efficient review of the
- 11 updated Application materials.

12

In lieu of re-filing, Hydro Ottawa is including this cover sheet, which provides a summary of the modest set of updates to select Attachments of the Exhibit, as follows:

1516

17

18

19

20

 UPDATED Attachment 2-4-3(A): OEB Appendix 2-AA - Capital Programs Table and UPDATED Attachment 2-4-3(B): OEB Appendix 2-AB - Capital Expenditure Summary – these appendices provide an overview of Hydro Ottawa's capital programs and expenditures, respectively. Both of these appendices have been updated to incorporate 2019 actuals.

2122

23

2425

 Attachment 2-4-3(E): Material Investments – the only updates to this Attachment are for the utility's Distribution Enhancements program within the System Service category.
 More specifically, the updates are in relation to the Smart Grid project known as "MiGen" described in section 2.3.3.

- 27 As originally submitted, section 2.3.3 of Attachment 2-4-3(E): Material Investments provides a
- 28 full description of the MiGen project, including external partners engaged in project development

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 3 ATTACHMENTS A, B, E **UPDATED** May 5, 2020 Page 2 of 2

1 and deployment. Among the key partners is Natural Resources Canada ("NRCan"). In identifying NRCan as a participant, Hydro Ottawa also states the following:

3 4

5

6 7

8

9 10

11 12 [NRCan] is a critical partner for this project. At the time of writing, in response to expressions of interest from NRCan itself, Hydro Ottawa is engaged in detailed discussions with NRCan regarding the lessons learned from the initial phase of the project and how these lessons can be incorporated into the next phase. Through this engagement, NRCan has signalled openness to adjusting the parameters of the project, if it can be demonstrated that such adjustments will add value and ensure that the broader objectives of both the project and NRCan's funding program will be met. Depending upon the outcome of further discussions with NRCan, Hydro Ottawa may subsequently submit updates to the project information included in this Application.1

- 15 In step with the foregoing, and with the outcomes of Hydro Ottawa's recent engagement with
- 16 NRCan on this matter, the utility is hereby submitting updates to the project information for
- MiGen. Please see the updated version of section 2.3.3 in Attachment 2-4-3(E): Material
- 18 Investments for additional information.

¹⁹ Attachment 2-4-3(E): Material Investments, page 357.

System O&M		\$28,137			\$29,158			\$30,002			\$ 28,556			\$ 33,591		\$32,779				

Notes to the Table:

- 1. Historical "previous plan" data is not required unless a plan has previously been filed. However, use the last OEB-approved, at least on a Total (Capital) Expenditure basis for the last cost of service rebasing year, and the applicant should include their planned budget in each subsequent historical year up to and including the Bridge Year.
- 2. Indicate the number of months of 'actual' data included in the last year of the Historical Period (normally a 'bridge' year):

Explanatory Notes on Variances (complete only if applicable)

Notes on shifts in forecast vs. historical budgets by category

See Section 8.1 of Exhibit 2-4-3: Distribution System Plan

Notes on year over year Plan vs. Actual variances for Total Expenditures

See Section 8.1 of Exhibit 2-4-3: Distribution System Plan

Notes on Plan vs. Actual variance trends for individual expenditure categories

See Section 8.1 of Exhibit 2-4-3: Distribution System Plan

Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 1 of 43

(By way of this enclosure, Hydro Ottawa is updating the information in section 2.3.3 of Attachment 2-4-3(E): Material Investments, pertaining to the utility's Smart Grid project known as MiGen.

As noted in the cover letter addressed to the OEB Secretary that accompanies the updates to Hydro Ottawa's Application for 2019 actuals, the utility has utilized a specific convention to identify updated evidence. Any updates to Application evidence which incorporate 2019 actuals are marked with a yellow highlight. Any revisions to the original evidence (i.e. corrections) are marked with a highlight as well as strikethrough.

The ensuing updates to section 2.3.3 of Attachment 2-4-3(E): Material Investments represent a lone exception to Hydro Ottawa's use of the strikethrough convention. Herein the use of strikethrough denotes an update. Hydro Ottawa believes that use of this exceptional approach is warranted in this singular instance, in light of the number of updates to the project summary and the need to ensure efficient review of the updated information by parties to this proceeding).

2.3.3. DISTRIBUTION ENHANCEMENT

The Distribution Enhancements Budget Program includes two main programs - The Smart Grid Fund Initiatives and the MiGen Program (formerly known as The GREAT DR V2), as well as other minor Distribution Enhancements projects.

Through this program, Hydro Ottawa's total investment over the 2021-2025 period is \$\frac{\\$12.1M}{2021}\$. In Historical Years, Hydro Ottawa has invested \$\frac{\\$8.9M}{2021}\$. In the 2016-2020 period. Projects covered under this program are discussed in further detail in the following sections.

2.3.3.1. Smart Grid Fund Initiatives

2.3.3.1.1. Project Summary

The Smart Grid Fund Initiatives program is designed to provide a funding stream for a portfolio of innovation initiatives. These innovation initiatives will provide for the enhancement of tools,

Hydro Ottawa Limited

technologies, training, or processes in a system operating context that are core to Hydro Ottawa operations and effectiveness. In addition to having a continued internal funding mechanism, Hydro Ottawa will pursue external innovation funding sources such as provincial and federal governments and non-government organizations (e.g Natural Resources Canada, Ontario Ministry of Energy or Independent Electricity System Operator of Ontario). Having a planned investment level and timing will enhance the planning and execution of innovation projects as staff across the organization will be able to provide input towards a known timeline and funding envelope.

2.3.3.1.2. Project Description

Current Issues

The Smart Grid Fund Initiatives project includes innovative initiatives which are part of Hydro Ottawa's Smart Energy Roadmap - a comprehensive plan developed by a cross-functional team of employees forming Hydro Ottawa's Smart Energy Steering Committee. This committee is primarily a combination of management staff from the Information Technology and Distribution Engineering and Operations divisions. With this cross sectional nature and the active participation from the executive management team, the committee is an effective driver for innovation and improvement.

The Smart Energy Roadmap, is the integrated "whole of company" plan to achieve Hydro Ottawa's Smart Energy vision. This vision is articulated in the company's Strategic Direction 2016-2020, which also offers the following definition of "smart energy": "an energy system that makes effective use of available technologies to maximize consumer, community and environmental benefit. It is sustainable, customer-centric, reliable, cost-effective, secure, and constantly evolving. It is responsive to evolving needs and opportunities, and focused on tangible benefit." The projects under the Smart Grid Fund Initiatives program represent only a subset of the Smart Energy Roadmap initiatives, other initiatives are being undertaken as their own program, or integrated augmentation to existing activities. Some of the initiatives being undertaken as their own program include: Self Healing Grids (Section 4.2.1), AMI outage

management Integration (Section 4.1.4) and The GREAT-DR v2 the MiGen program (Section 3.3.2).

Project Scope

Projects planned for the 2021-2025 window include:

- Outage Intelligence. The development of the ability to automatically locate and identify the root cause of distribution system faults.
- Outage Analytics. The development of custom reporting and analytics to be available to any and all Hydro Ottawa staff.
- Smart System Planning: Expand and augment the tools and techniques to provide system information to key decision makers in order to support decisions that align to the real condition of the grid.
- Outage Prediction. Machine learning and Artificial intelligence to identify and prevent incipient faults.

Main and Secondary Drivers

The primary drivers of the Smart Grid Fund Initiatives are:

- Reliability: The primary strategic outcome sought by the Smart Energy Roadmap is the target of developing enhanced grid reliability, and service offerings to enable the provision of 100% reliable electrical service.
- Other Performance/Functionality: The second strategic outcome sought by the Smart Energy Roadmap is to Position Hydro Ottawa to provide its customers with proactive and innovative energy solutions which align with our customers' needs, preferences, and objectives. Leveraging innovation and technology to align Hydro Ottawa with both current and future market trends
- System Efficiency: One of the key pillars of the Smart Energy strategy as defined in the roadmap is to leverage existing infrastructure and personnel by seeking opportunities

Hydro Ottawa Limited
EB-2019-0261

that leverage staff's existing knowledge, key competencies, and Hydro Ottawa's physical infrastructure

Performance Targets and Objectives

In selecting specific projects or initiatives to support under the Smart Grid Fund program, the Smart Energy Steering Committee will apply the following criteria:

- Innovation and Technology Initiatives that leverage technology to align with both current and future markets and position Hydro Ottawa to be Best in Class will be supported.
- Reliability and System Resilience Initiatives that assist Hydro Ottawa in moving closer to 100% reliability, by improving customer service continuity measures will be supported.
- Environmental Sustainability Initiatives that serve to reduce environmental impact, supporting Hydro Ottawa and its customer's transitional goal to achieve a net zero carbon future will be supported.
- Revenue Growth and Diversification Initiatives that have the potential to expand current value and revenue streams, while increasing efficiency of Hydro Ottawa's grid will be supported.
- Leveraging Infrastructure and People Initiatives that provide opportunities to leverage existing knowledge, key competencies, and physical infrastructure will be supported.

2.3.3.1.3. Project Justification

Alternatives Evaluation

Alternatives Considered

Alternatives considered for the Smart Grid Fund Portfolio:

- Proceed with proposed Smart Grid Fund investments
- Proceed with a different or curtailed portfolio of investment or
- The 'do-nothing' alternative which would ultimately result in a reduced capacity for

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2

innovation

Evaluation Criteria

The investment alternatives were evaluated for alignment with the performance objectives listed in Section 3.3.1.2.4. Further evaluation was completed considering support of the System Service criterion of:

- Safety
- Reliability
- Power quality
- System efficiency
- Other performance/functionality

Preferred Alternative

As described in Section 3.3.1.2.3 above, the strategic direction of the Smart Energy Roadmap and the processes that will be used by the Smart Energy Steering Committee to evaluate and specific initiatives to support under the Smart Grid Fund Portfolio align very well to 3 of the above 5 criteria, and the investment portfolio has been prioritized through its impact to performance objectives. It is therefore preferred to proceed with the selected project portfolio.

Given the ongoing initiatives in the 2018 through 2021 time frame (as described under the The GREAT-DR project 9202014255 MiGen program) and the other technology investment projects in flight through the 2021 through 2025 time frame it was decided to create a funding envelope that met the following criteria:

• Timing: The years 2022-2025 contained the least number of complex innovation/technology investment projects therefore these years were chosen for the innovation investments

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 6 of 43

 Funding Levels: The years 2022-2025 contained a reduced level of innovation/technology investment, therefore the following investment levels were selected

Table 2.53 - Historical and Future Smart Grid Fund Program (\$'000,000s)

	ŀ	listorica	al	Br	idge	Test					
	2016	2017	2018	2019	2020	2021	2022	2023	2024	2025	
Total Expenditure							\$0.50	\$1.01	\$1.05	\$0.93	

Benefits

While the benefits of the individual project initiatives within the program are yet to be completely defined, the process by which the initiatives are selected for funding does take into account the benefits in the following categories.

Hydro Ottawa Limited

Table 2.54 - Project Benefit

Benefits	Description
System Operation Efficiency and Cost Effectiveness	As stated above, one of the key pillars of the Smart Energy strategy as defined in the roadmap is to leverage existing infrastructure and personnel by seeking opportunities that leverage staff's existing knowledge, key competencies, and Hydro Ottawa's physical infrastructure. This leveraging will result in direct improvements to the System Operation efficiency and cost effectiveness. Furthermore, one of the key criteria used to evaluate projects for support is Innovation and Technology.
Customer	The primary strategic outcome sought by the Smart Energy Roadmap is the target of developing enhanced grid reliability, and service offerings to enable the provision of 100% reliable electrical service. The second strategic outcome sought by the Smart Energy Roadmap is to Position Hydro Ottawa as the provider of proactive and innovative energy solutions which are driven by our customers' needs, preferences, and objectives.
Safety	While safety is not a specific criterion that has been called out by the Smart Energy Roadmap, it is expected that safety remains at the core of all Hydro Ottawa projects and as such initiatives the further enhance the safety of customers and staff will be given priority.
Cyber-Security, Privacy	While cyber-security is not a specific criterion that has been called out by the Smart Energy Roadmap, it is expected to be a factor in the evaluation of the initiatives alignment to the Innovation and Technology criteria.
Coordination, Interoperability	N/A
Economic Development	Initiatives that have the potential to expand current value and revenue streams, while increasing efficiency of Hydro Ottawa's grid will be supported, therefore there is a significant potential for the development of new business within the Hydro Ottawa group of companies or through partnerships with other utilities and 3 rd parties.
Environment	Initiatives that serve to reduce environmental impact, supporting Hydro Ottawa and its customer's transition to a net zero carbon future will be supported

2.3.3.1.4. Prioritization

Consequence of Deferral

The Smart Grid Fund Program is intended to foster and support innovation and improvement within Hydro Ottawa. Deferral of the creation of the Smart Grid Fund program could result in missed or delayed opportunities for innovation, improvement, or 3rd party funding support.

Priority

Based upon the issues described in section 2.1, and potential benefits described in section 3.3; this program is considered a Medium priority.

2.3.3.1.5. Execution Path

Implementation Plan

The implementation plan for the Smart Grid Fund program is based on a governance model as provided by the Smart Energy Steering Committee. This includes an intake process for innovation ideas and proposals and evaluation criteria that is articulated in the Smart Energy Roadmap document. Through the 2021-2025 window Hydro Ottawa will undertake to:

- Outage Intelligence. The development of the ability to automatically locate and identify
 the root cause of distribution system faults. Investing in models to leverage existing, and
 newly available data to respond to system outages.
- Outage Analytics. The development of custom reporting and analytics to be available to any and all Hydro Ottawa staff.
- Smart System Planning: Tools and techniques to provide system information to key
 decision makers in order to support decisions that align to the real condition of the grid.
 Dissemination of asset data in real time, and forecasting system loads in local
 neighborhood levels.
- Outage Prediction. Machine learning and Artificial intelligence to identify and prevent incipient faults.

The individual projects will be evaluated and prioritized according to impact, timing, and budget.

Risks to Completion and Risk Mitigation Strategies

As the Smart Grid Fund program contains many initiatives, there is little risk to execution of the overall program. Projects and initiatives can be exchanged or re-prioritized based on the issues or constraints discovered.

Timing Factors

There are essentially two elements that could affect the timing of the investments under the Smart Grid Fund Program.

- Availability of external funding: There is a potential that the funding available requires the adjustment of the internal investment profile.
- Availability of staff: As with any project execution, internal resources are critical in order
 to ensure success. Innovation projects have the potential of being deferred in order to
 support programs and projects that are considered essential to Hydro Ottawa.

Cost Factors

As with any innovation portfolio, there is a possibility that the technology aspects of the initiative proeve to be more complex and therefore costly than originally anticipated. The mitigation strategy is to secure external funding so that the risk is shared across multiple sources of funds.

Other Factors

As with any innovation portfolio there is the potential of new technology developments or regulatory constraints that could affect the overall execution of the program. However, as there are several candidate initiatives under the Smart Grid Fund Program, the potential of failure is significantly reduced.

3.3.1.8. Project Details and Justification

Table 2.55 - Project Benefit

Project Name:	Smart Grid Fund Initiatives
Capital Cost:	\$3.49M
O&M:	TBD
Start Date:	1-Jan-2022
In-Service Date:	Multiple
Investment Category:	System Service
Main Driver:	Reliability
Secondary Driver(s):	System Efficiency and Other Performance objectives
Customer/Load Attachment	All customers

Project Scope

The scope of initiatives that will be supported under this portfolio will be determined according to Hydro Ottawa's Smart Energy Roadmap that has been prepared by a cross-functional team of employees known as the Smart Energy Steering Committee. This committee is focused on developing a strategy for innovation and process improvement within the utility operations in order to improve both efficiency and effectiveness

Work Plan

The planned initiatives will be executed in the windows listed below.

- Outage Intelligence (2022-2023)
- Outage Analytics (2021-2022)
- Smart System Planning(2023-2025)
- Outage Prediction (2025)

Customer Impact

The primary strategic outcome sought by the Smart Energy Roadmap is the target of developing enhanced grid reliability, and service offerings to enable the provision of 100% reliable electrical service.

The second strategic outcome sought by the Smart Energy Roadmap is to position Hydro Ottawa as the provider of proactive and innovative energy solutions which are driven by our customers' needs, preferences, and objectives.

2.3.3.2. MiGen Program (formerly known as The Grid Edge Active Transactional Demand Response 2.0) (The GREAT-DR v2, currently known as "MiGen")

2.3.3.2.1. Project Summary

MiGen was formerly known as The Grid Edge Active Transactional Demand Response 2.0 project (abbreviated as The GREAT-DR v2, or TGDR2). This program consists of projects that enable and empower customers to participate in a smart transactive energy future. These projects will focus on resolving the There are many stressors on the electricity grid including cost, grid management, climate change, and electrification, while delivering customer centric solutions with behind the meter technologies. Projects may be initiated by Hydro Ottawa or third parties with which Hydro Ottawa is a collaborator.——and meeting increasing customer expectations for more autonomy.

To evolve and enhance the electricity system, the MiGen program The GREAT-DR v2 (TGDR2) project—was created to address these stressors for the stakeholders. A previous project under MiGen was The GREAT-DR. The GREAT-DR sought to optimize existing distribution, transmission and centralized generation infrastructure by managing supply-demand locally and trickle the benefit upstream. with an open source, worldwide royalty free interoperable solution platform in place of the standard costly one outcome wires solution. This end-to-end interoperable platform and by design adheres to Privacy-by-Design, best cybersecurity practices and interoperability. The architecture is hierarchical to serve from the market operator to the prosumer at the edge, and is largely decentralized in grid management for visibility, autonomy, resiliency and scalability. The GREAT-DR largely consists of smart software solutions with physical hardware for monitoring, computing and communicating.

The Lessons Learned from this early project will be used to guide future MiGen projects with the goals of:

- 1) Focusing on behind the meter technology
- 2) Developing partnerships, collaborations with vendors and stakeholders

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 12 of 43

3) Supporting the adoption of technology by the utility and its customers

The GREAT-DR effect on the grid is to optimize existing distribution, transmission and centralized generation infrastructure by managing supply-demand locally. This will thus enable:

- (1) Customer loads to follow supply of GHG-free electricity sources and minimize need for new fossil generation;
- (2) Grids to optimize utilization to their dynamic capacity (not just the lower set planning limit), minimizing need for costly infrastructure upgrades;
- (3) DERs to effectively integrate to the grid; and
- (4) Markets that encourage prosumers to automatically bid their DERs into the grid and trade with others.

This will be done by establishing premise, local, zonal and grid level DER management while providing a Transactive Energy Market (TEM) that compensates participating prosumers.

The project will establish DERs at community housing complexes and private residences in the Ottawa-area and demonstrate the solution through 2020 at approximately 200 customer premises.

2.3.3.2.2. Project Description

Overall, the MiGen program will help evolve the grid from being load-following to supply-following. The projects may also manage the balance across prosumers to support and help enable Net Zero Carbon Communities, and accelerate electrification (transportation and heating) required to meet economic and climate change goals by ensuring existing grid infrastructure can accommodate load growth.

Page 13 of 43

Current Issues

There are several stakeholders in the electric utility industry, and each has issues that are unique, yet while also sharing some and also similar issues. The current major issues are:

1) Grid Management Constraints

Ability for the Factors affecting market operator and local distribution company to optimize optimization of grid management (planning, investing and operating) is limited by the are level of grid visibility, control, and ability to act (personnel plus systems resources). Spinning reserve, lower asset loading, and single contingency are examples of costly idle buffer capacity to cover for comfortable margins of error. Also, provincial demand response has addressed the provincial peak for reasons largely to balance supply to demand. However, peak loading of any distribution system asset is very much likely not coincident to another asset or the provincial peak.

Another constraint is that In addition, many utility grid management tools are not interoperable and that can lead to increased cost pressure and stranding of assets if the asset cannot keep up to the required functionality.

The GREAT-DR will provide grid edge level very near real time visibility to the utility and market operator for optimal planning and operation, plus control of loads and sources that can aggregate to meaningfully benefit grid loading, quality and stability.

2) Social

Customers are seeking more autonomy, personalized service, or more control of their usage and thus the amount of their bill. Time-of-Use rates have helped move off the traditional provincial peak, but the peak has shifted because of more dispersed generation and change in customer behaviour. However, the system peak is not the same across the transmission planning zones, the utilities within these zones, or neighbourhoods within a utility service area, so the challenge is in socializing customers to local constraints too without confusing or

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 14 of 43

overburdening them. Also, customers vary in their want (behaviour) or ability (demographic, tool or premise constraints) to participate in energy reduction or load offset activities.

MiGen will seek to support the deployment of technologies and tools to the customer premise in order to help the customer and utility collaborate in the effective management of their electrical and utility loads. The GREAT-DR democratizes the grid and provides benefits to all stakeholders, including those living in community housing. By managing at the edge and scaling to hundreds of thousands of customers, shoring of the grid can be shared across all prosumer types and amongst more variety of meaningful loads and energy sources at the edge. Transactive Demand Response over a larger prosumer base would reduce the reliance, or burden, on few participants and increase probability of achieving grid shoring targets. By actively managing the loads and sources to the dynamic asset capacity rating, the The customer benefits with greater ability to electrify more, connect more green energy sources, and storage, plus will benefit from the increased utilization of their and the utility's existing assets. Added social benefit is the fact that The GREAT-DR is built on the three pillars of Privacy-by-Design, cybersecurity, and Interoperability.

3) Economic:

Economically, the bottom line An important consideration for a customer is their electricity bill and fees imposed to meet interconnection requirements when adding more load or energy sources within their premise, including service entrance upgrades if needed.

Present rate structures are not conducive to non-incented introduction of dispersed generation or energy storage. However, tools for the customer to manage their bill under a fixed load contract or critical peak pricing structure, or even to have or take advantage of a Transactive Energy Market are not mature. Grossly breaking down the rate structure into the commodity and delivery components, it is the latter that the utility can influence through its investment and management of the grid.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 15 of 43

Under the MiGen program, projects The GREAT-DR, as a tool, will help create optional rate structures for prosumers, similar to mortgage structure options, which are suitable for the type of participation they want in the grid. Also, by providing a more feasible non-wires solution, the projects—The GREAT-DR can help utilities reduce spending on bulking up the grid assets and save money or refocus on under met reliability needs. Because of the interoperability requirements of the GREAT-DR, there is a higher likelihood of not-stranding grid-supporting assets. Other economic benefits come from: the ability to allow higher penetrations of electrified loads and sources.; greater competitiveness in provision of The GREAT-DR shore supporting devices because of the open source, worldwide royalty free platform, and it will allow; compensation of prosumers for helping shore the grid, through establishing a Transactive energy market that also allows prosumers to trade energy amongst themselves; lower commodity prices since The GREAT-DR machine learning will allow the market operator to forecast and predict better, and rely on other methods of providing least cost of service; provision of ability to improve reliability by autonomously managing energy source interconnection set-points adhering to the IEEE 1547-2018 generation interconnection standard i.e., ride through transient aberrations in the grid, plus help in restoring service quicker by allowing generation to offset load and provide for more than an N-1 contingence, including sustainment of an isolated micro-grid.

4) Environmental

The environmental issues reflect physical, social and economic implications. Climate change can radically change the asset dynamic loading capacity, and can create transient aberrations or longer term disruptions to electrical service. Customers are increasingly concerned about their impact on the environment and policy makers are following suit to transition, for example, to net-zero carbon (NZC) buildings and homes.

Overall, The GREAT-DR will help evolve the grid from being load-following to supply-following.

The GREAT-DR, by dynamically managing loads and energy sources at the grid edge, will help reduce reliance on fossil fuel peaking plants to mitigate intermittence of green sources or a bit

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2

Page 16 of 43

longer peaking periods. It can also manage the balance across prosumers to achieve Net Zero Carbon Communities, and accelerate electrification (transportation and heating) required to meet climate change goals by ensuring existing grid infrastructure can accommodate load growth.

Project Scope

This is a project that will demonstrate an alternative to the wires and centralized generation solution for growing electrical load, plus a least-cost-of-service option for shoring the grid.

The GREAT-DR v2 (which has more recently been re-branded as "MiGen") will span approximately three years from Nov. 20/'18, to Mar. 31/'22 under the NRCan Smart Grid Fund, and will extend an additional five years for monitoring performance. Hydro Ottawa will own the assets and be responsible for such for the duration of its useful life. These assets include a mix of solar PV, smart inverter types, battery energy or thermal storage systems, air-source heat pumps, smart thermostats and load control modules, plus The GREAT-DR elements and subscribed requisite software supporting systems, such as the software for machine learning, Transactive Energy Market, Back Office System, customer loyalty and settlement, and user GUI.

The GREAT-DR solution platform will be standards based and remain an open source, worldwide royalty free platform is pillared by Privacy-by-Design, best cybersecurity practices, and interoperability principles. The IEEE 2030.5 standard is the foundation for interoperability. Through IEEE, not-for-profit worldwide organisation that advanced technology for the benefit of humanity, Hydro Ottawa and its partners will inform the standard roadmap and certification assessment program. IEEE will host and protect The GREAT-DR within its Open Source Community.

-

^{*}Natural Resources Canada ("NRCan") is a critical partner for this project. At the time of writing, in response to expressions of interest from NRCan itself, Hydro Ottawa is engaged in detailed discussions with NRCan regarding the lessons learned from the initial phase of the project and how these lessons can be incorporated into the next phase. Through this engagement, NRCan has signalled openness to adjusting the parameters of the project, if it can be demonstrated that such adjustments will add value and ensure that the broader objectives of both the project and NRCan's funding program will be met. Depending upon the outcome of further discussions with NRCan, Hydro Ottawa may subsequently submit updates to the project information included in this Application.

UPDATED
May 5, 2020
Page 17 of 43

An outcome of The GREAT-DR platform will be a template strategy for achieving a Net-Zero Carbon Community (NZCC) community overlaid with market-driven Transactive Demand Response (TDR) solution that optimizes energy sources and loads in real-time for an overall smart energy network (TGDR2) and encourages prosumer behaviour change. Thus, it will be used to:

- i) engage and educate participating customers and others towards becoming prosumers,
- ii) directly connect prosumers with the system and market operator through a Transactive Energy [shadow] Market (TEM) and compensate them for savings they provide the utility and bulk system, and
- iii) engage the regulator, market operator, and governments for informing policy and program development.

TGDR2 will manage DERs in real-time within the grid's dynamic operating limits through automatic and active negotiation between devices that use or produce electricity at the customer-level. This is through:

- i) at the premise-level, a home energy management system controller (HEMS-C) and customer agent (CA),
- ii) at the local (i.e., neighbourhood) and zonal-level through transactive / transformer agents (TA), and
- iii) at the grid-level, a back office system (BOS).

The second version of The GREAT-DR platform will be enhanced beyond Technology Readiness Level Five (TRL5) – Demonstration and thus much closer to providing sustained grid benefit. It will be deployed to the participants in the first version, and the 200+ participants in the second version. The participant demographic varies include a variety of age groups, income levels, states of employment, load types and sources, plus personalities.

Main and Secondary Drivers

The main and secondary drivers for The GREAT-DR (currently known as "MiGen") follow.

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 3 Attachment E - s. 2.3.3 UPDATED May 5, 2020 Page 18 of 43

Proprietary and Non-interoperable Grid Solutions:

There are many solutions for Demand Response and though they may have some interoperability features, they are not truly interoperable because of selectivity from within a standard and proprietary additional layers. This situation handcuffs the adopting utility to, for example, a specific product development roadmap, vendor's service or product line, and ongoing fees. Also, few solutions have been developed with the utility full spectrum need in mind. The utility should demand systems used in the management of the grid to be interoperable, but can only do so if there is a common rule book to follow i.e., IEEE2030.5, and platform to plug into i.e., The GREAT-DR.

Poor Resiliency from Centralized Systems:

There are other parties attempting a Transactive Demand Response platform, however, development is in infancy and not gaining interest for three reasons: relying on a centralized architecture, being proprietary, and lax on customer privacy. A data heavy, centralized system is inherently costly in infrastructure, more latent, plus lower in performance and wider in affected service area when parts of the central system fail.

Sole Purpose Solutions:

The many behind-the-meter technology management devices serve a single purpose, like thermostats for temperature, load controllers for on/off of medium or large loads, solar inverters for generation output, and battery systems for absorbing or sourcing energy. For a utility to interact with each of these devices individually is impractical, and non-optimal. An intelligent device that can manage each and be the contact to the grid is ideal. The GREAT-DR Home Energy Management System Controller element would be the interface that smartly coordinates management of these technologies.

Fear of Overwhelming Data Management and Communications:

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 19 of 43

Data from behind-the-meter devices have been seen as a treasure, and the overhead, security and privacy concerns of funnelling all that data to a centralized location for processing and storing has typically been ignored. True, the speed and cost of managing big data is improving, but the other problems remain. A data governance model for defining the necessary data, handling and storage in a hierarchical, decentralized system can overcome these problems. TGDR ensures an efficient, secure and open-format data management. As a result, the project right-sizes data exchange (2-4kB files), ensures privacy, and establishes a cyber-secure firewall between prosumers and the grid (both in terms of its depth and breadth). Predictive analytics forecasts when DER support is needed.

Supervision-Intense:

The system operator, grid planner and prosumers are overtaxed with tasks and data. For the utility, it's becoming increasingly complex to decipher, forecast or predict the load profile, prepare work plans, restore power, and determine infrastructure needs because of the radical dynamics in the grid caused by intermittent or dispersed generation, micro-grids, mobile loads, and energy storage. For the customer, it's becoming increasingly complex to adapt to changing messaging regarding grid needs (energy conservation or demand reduction), and stay diligent in complying so they can reduce their bill. These issues will become increasingly difficult with higher penetrations and introduction of Transactive Demand Response, unless the data is streamlined, and the activities more automated, as is being done with The GREAT-DR. As an example, without automation and machine learning of The GREAT-DR, the utility's management of the set-points per the new generation interconnection standard IEEE 1547-2018 as the grid feeder connection (normally open point) changes, and a planner's ability to know an asset's real loading becomes intensely laborious, prone to error and nevertheless costly.

Complex Integration & Management of New Technologies:

Utility and prosumer integration and management of new technologies is complex to assess and because of lack of good tools and skill, penetration levels are constrained, interconnections costly, and management complex as explained herein.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 20 of 43

Microgrids: TGDR negotiates to optimize load-source-infrastructure balance where renewables, storage and load control exists in reasonable proportion. It will control fuel-source optimization, for example between a fossil fuel and electricity. It can be used to interact with ant tertiary controllers for a microgrid.

Energy Storage: TGDR2 will strategically use TRL5+ battery and thermal storage technology to increase power and other energy system flexibility as an integrated solution, and will prove stacked value.

Distributed Energy Resource Management (DERM): our approach will integrate behind-the-meter customer energy loads and sources into the grid. Optimization decisions dispatch, storage, and on best fuel source will be made at the customer level using system-level information. The back office system contemplated as part of this project is an innovative DERMS.

EV integration: TGDR2 treats EVs as watts and nega-watts for Vehicle-on-Grid (VoG) management. Thus, the intent is to manage EV charging within electrical service constraints to avoid service upgrades still providing for customer-centric charging.

Forgetting the Customer:

Customers are no longer just complaining about their electricity bill or concerned about the environment, they want to act. When they purchase an EV, generation or storage system they expect simple, non-costly interconnection service from the utility, and the best return. Also, when Demand Response strategies are adopted, they want their comfort, privacy and no complexity, and final say. Customers in effect are becoming prosumers, and their satisfaction can be improved by involving them to the extent they wish, in helping reduce their bill with minimal effort on their part. TGDR includes a novel approach to engage them and encourage participation in shoring the grid through an automated approach that considers their

Hydro Ottawa Limited EB-2019-0261 Exhibit 2 Tab 4 Schedule 3 Attachment E - s. 2.3.3 UPDATED May 5, 2020 Page 21 of 43

preferences, keeps their activity private and secure, provides feedback, and is powered by voice assistance. The prosumers will be rewarded for their contribution to shoring the grid. Using a tier prosumer classification approach, different awareness strategies can be used to educate or encourage prosumers in their energy use.

Performance Targets and Objectives

The targets to achieve with TGDR are:

- 1. To have 90%+ participant satisfaction.
- 2. To demonstrate the economic benefit to the ISO, DSO and prosumer in helping shore the grid using The CREAT-DR.
- 3. To be able to offset at least on average of 2kW of coincident load on a neighbourhood transformer for each participating premise.
- 4. To have a Transactive Demand Response activity issued and acted upon, in non-emergency cases, and targets achieved within five minutes; in emergency cases, to do so within 30 sec.
- 5. To demonstrate how generation can help restoration efforts and not remain off until five minutes have passed after restoration.

2.3.3.2.3. Project Justification

Alternatives Evaluation

Alternatives Considered

Alternatives considered for the MiGen program:

Purchase of DERMS system: these are centralized back-office systems that can indirectly control dispersed generation assets. However, they are complex, highly dependent on accurate grid modeling and data mapping, plus costly to implement and maintain. Also, they do not

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 22 of 43

involve the customer as a prosumer and add-on equipment, modules or services are likely restricted to OEM-only options.

Increasing grid asset capacity: commonly referred to as "the wires solution," this is a relatively simple, traditional though costly solution. Decisions on increasing grid infrastructure capacity are typically made when peaking is just even a few hours a season because of poor grid visibility, data analytics, or alternative tools for mitigating relatively short loading periods. The ramifications of increasing distribution transformer size at the edge trickles upstream and translates to requirement for increasing capacity of cabling, wiring, duct bank sizes, pole classes, switching equipment, station transformation, and so on. Money saved could better be left as saved if not spent to address reliability.

Adopt proprietary non-interoperable interfaces: there are vendors that offer demand or energy management systems, and if they have an interface for utility oversight or management, their solutions require their own proprietary - and largely non-interoperable or transparent -- interfaces with the utility. These systems only work with certain consumer behind-the-meter devices sold from or aligned with the same OEM. It would be costly and complex for a utility to manage an interface per OEM or even align to one OEM; customers will want choice and not accept imposition of what to procure and from whom. The goal of the MiGen program is to work towards to encept behind TGDR is to have one interface for the utility and customer, and same rules for the OEMs to follow if they want their products or services to interact with the grid.

Do-Nothing: potentially costly – to the customer -- generation, storage or electrified load interconnection, and costly accommodation for the utility. Doing nothing can prematurely age assets and lead to worsening reliability. It will also reduce penetration of electrified loads, generation or storage. Also, there won't be a feasible way to manage inverter connected generation under IEEE 1547-2018.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 23 of 43

Preferred option: To invest in technologies and initiatives that enhance the collaboration between the utility and customer.other than TGDR, it is increasing grid asset capacity, though costlier it provides for customer choice and simplicity for the utility.

Evaluation Criteria

A detailed quantitative evaluation criteria of the following factors will be used to assess each of the projects undertaken by the MiGen program:

- Performance
- Benefits
- Economic
- Environmental

The evaluation criteria will be used for comparing alternatives during front-end engineering evaluations and, more importantly, during the demonstration phase of the project.

Provide a description of evaluation criteria that were used to compare alternatives.

The evaluation criterion for comparing alternatives at this project demonstration phase is qualitative. During the third year of the three-year demonstration project, a qualitative assessment will be more meaningful.

Preferred Alternative

The preferred alternative is for Hydro Ottawa to invest in technologies and interfaces to devices (loads and sources) behind the meter so that as a utility we can attempt to bridge the gap between the utility companies and the customer.

The preferred alternative to The GREAT-DR solution is simply defaulting to increasing grid asset capacity. Assessment of this project using traditional asset management investment tools are not suitable as The GREAT-DR project is a novel demonstration project at this time to learn and provide the industry an alternative to other non-ideal solutions, including an alternative to the "preferred alternative" selected here. The strong potential upside benefit to all the stakeholders

Hydro Ottawa Limited
EB-2019-0261

Page 24 of 43

should justify this trial. The lessons learned will provide the necessary information for traditional asset investment evaluation methods.

Project Timing & Expenditure

Hydro Ottawa has cultivated prior experience and success in supporting this type of innovation. Hydro Ottawa team would be deploying an updated methodology, one that has been tuned for higher performance by the lessons learned from previous projects.

As one can see from the investment profile that is included below in the table, the initiatives will begin in the year 2021 where we will be gathering the team and collaborators, as well as planning for the next upcoming years. The execution year will be 2022, during which the utility will be deploying, gathering data and adjusting prior to full release of a potential platform. Maintenance costs and service licensing of \$750,000 are spread evenly across for 2023-2025. Despite many challenges, for the first version of The GREAT-DR, Hydro Ottawa recruited 13 participants, plus kept its expenditure commitment to within 2% of budget. The first TGDR platform was partially funded by the Ontario Smart Grid Fund (OSGF) and the LDC Tomorrow Fund. Hydro Ottawa's proposal was to demonstrate the platform using five computers mimicking five different customers. Instead the OSCF asked if Hydro Ottawa could demonstrate with up to 30 real participants. Without additional funding to cover behind-the-meter installations, Hydro Ottawa was able to secure partners that provided greatly discounted products and services, and provided the discounted package for Participants. Prospective participant interest was high and oversubscribed; however, project conditions (e.g., roof condition & orientation; electrical service; interest of others connected to the same distribution transformer, load variety, etc.) ruled any out, and political climate leading up to the provincial elections complicated and hindered recruitment.

In the second year of this three-year demonstration project, additional to the technical assessment for TGDR, Hydro Ottawa will conduct a comprehensive economic and social assessment versus alternative solutions.

Cost on MiGen-TGDR2 is being mitigated by:

- Applying for funding from other sources.
- Requiring collaborating partners to "have skin in the game" by: providing products and services at or below most preferred customer pricing; agreeing, where reasonable, to fixed paid budget; providing in-kind support to cover risk that may arise during execution of their role.
- Planning heavily upfront in the project execution process and managing the project professionally throughout the timeline.

Table 2.57- Program Benefits

Benefits	Description
Dononio	Since MiGenTGDR (currently known as "MiGen") provides benefits to the Prosumer, utility and market operator, the cost is also spread across these stakeholders and makes it more affordable to each. Unlike traditional solutions, MiGenTGDR offsets costs for each stakeholder.
System	System Operating Efficiency: helping restoration by semi-autonomously staggering large load pick-up versus having the system operator concerned with avoiding cold or hot load pick-up; allowing energy sources to reduce load whereby in the past sources were kept off until five minutes after the grid was stable; providing better visibility into the grid and, through machine learning, better forecasting and predicting of load shape so better dispatching of central generation.
Operation Efficiency and Cost Effectiveness	get for key performance: the ultimate objective is to support the five-minute market as a referencies, and within 30seconds in a grid emergency; TDR requests are met 75% of a in the first call. Other efficiencies come from utilities being able to use TGDR as a cost e tool for managing inverters per IEEE1547-2018. **GetCores of the meter technology Developing partnerships, collaborations with vendors and stakeholders Supporting the adoption of technology by the utility and its customers for the customer Sharing in the value from helping shore the grid. So, when prosumers help the grid, they receive benefit through a loyalty program and settlement program that's tied to a Transactive Energy Market. The activity is conducted automatically with minimal prosumer involvement beyond setting preferences on how their assets can be used. Deferring or avoiding service entrance upgrades when adding more electrified loads or sources.
	Set-targets for key performance: the ultimate objective is to support the five-minute market as a preferred method for providing least cost of service. This means that a Transactive Demand Response (TDR) request needs to be acted upon by a prosumer device within five minutes in non-grid emergencies, and within 30seconds in a grid emergency; TDR requests are met 75% of the time in the first call. Other efficiencies come from utilities being able to use TGDR as a cost effective tool for managing inverters per IEEE1547-2018.
Customer	 MiGenTGDR2 offers many values to a prosumer, namely by: Focusing on behind the meter technology Developing partnerships, collaborations with vendors and stakeholders Supporting the adoption of technology by the utility and its customers for the customer Sharing in the value from helping shore the grid. So, when prosumers help the grid, they receive benefit through a loyalty program and settlement program that's tied to a Transactive Energy Market. The activity is conducted automatically with minimal prosumer involvement beyond setting preferences on how their assets can be used. Deferring or avoiding service entrance upgrades when adding more electrified loads or sources. Containing or reducing energy source interconnection costs related to monitoring and protection & control. Trading opportunity, though utility or aggregator mediation, to trade energy with others. Improving more timely visibility and analysis of their energy use and production. Increasing autonomy with how and when they can meet grid needs so comfort is maintained. Increased reliability as energy sources can help more quickly restore service and sources that are IEEE1547-2018 complaint can be used to avoid outages stemming from transient aberrations in the grid. MiGenTGDR2 also helps the customer rate base monetarily or through improved reliability when
	respectively used to defer investment in increasing grid capacity, or shifting that investment to reliability improvement projects.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 27 of 43

Benefits (Cont'd)	Description (Cont'd)
Safety	A practical assessment on how MiGenTGDR may help health and safety protections and performance will be completed in the third year of the demonstration. Anecdotally, TGDR should help prescribe when energy sources can generate while crews are working on the grid.
	MiGenTGDR follows Privacy-by-Design principles and will follow or exceed best cyber-security standards, period. TGDR is based on the IEEE 2030.5 interoperability standard, and the inverter based generation
Cyber-Security, Privacy	shall comply with IEEE1547-2018 interconnection standard. Communications will employ a WiFi mesh based on IEEE standards. The lessons learned through the TGDR demonstration project have been, and will continue to be, used for informing the standards roadmaps and updates. Members of TGDR are on the DOE sponsored IEEE2030.5 roadmap, and the IEEE Conformity and Assessment Program (for certifying against the standard) committees.
	The TGDR hardware elements are certified before installation: the Transformer/Transactive Agent (TA) is utility O.Reg. 22/04 compliant; the Customer Agent (CA) and the Home Energy Management System Controller (HEMSC) are both field certified by ESAFE to be CSA approved.
	MiGen would be looking at all of the following standards in order to ensure proper interoperability. Ie. IEEE2030.5, DNP3, OpenADR, OpenFMB, or Sunspec. If applicable, please explain how the investment applies recognized standards, referencing co-ordination with utilities, regional planning, and/or links with 3rd party providers and/or industry.
Coordination, Interoperability	In addition to the commentary under "Cyber-Security, Privacy," the IEEE2030.5 is a standard that applies from the Market System Operator to the Prosumer. Other interoperability standards like DNP3, OpenADR, OpenFMB, or Sunspec are specific to the utility, customer or a product and not broadly i.e., end-to-end, applicable as IEEE2030.5 and not nearly as comprehensive either.
	The essentials of TGDR will be available to the public as an open source, worldwide royalty free platform. This is to encourage adoption by all stakeholder groups, and through this demonstration, the partners will be the pioneers. Hydro Ottawa is gaining interest in the platform from other vendors, the IESO, and other utilities. Part of its mandate under the funding agreement is to disseminate information on TGDR and build the ecosystem for it to succeed.
Economic Development	If applicable, please describe the effect of the investment on Ontario economic growth and job creation. The demonstration is taking place in Ontario and many of the partners are from Ontario. The benefits with operating MiGenTGDR will remain in Ontario.
Environment	If applicable, please describe the effect of the investment on the use of clean technology, conservation and more efficient use of existing technologies. The MiGen programTGDR demonstration will show how smart management of green generation, battery and thermal storage, increase in electrified loads and load control can help communities achieve Net-Zero Carbon status and maintain it through changes on the prosumer side. MiGenTGDR will also demonstrate how it can provide "least cost of service" for the market operator and help offset costly – environmentally and monetarily fossil fuel peaking plants.

Page 28 of 43

2.3.3.2.4. Prioritization

Consequences of Deferral

Deferral of this project first and foremost jeopardises funding from NRCan. Secondly, deferral will place the utility in a precarious position with generators complying with IEEE 1547-2018. The utility will be able to request set-points in the inverter, however, will not have the appropriate tools for confirming continued compliance, or changing the set-points dynamically to changing feeder conditions.

The demonstration project will provide data for addressing the consequences / risks in the remaining categories.

Priority

MiGenTGDR is a high priority in context to other grid modernization demonstration projects. Funding and resourcing for projects in the DSP are constantly under pressure and a remedy is needed that breaks traditional approach to solving grid growth and reliability, plus management of the grid by system operations and asset planning. MiGenTGDR is for demonstration and not an immediate replacement solution to a project in the DSP; however, it has the great potential to be, and this demonstration must be undertaken to provide the results, knowledge and experience for application.

2.3.3.2.5. Execution Path

Implementation Plan

The project, where possible, work with partners such as developers, Ottawa-area community housing authorities, and individual residents—will work with Ottawa-area community housing authorities (who this consortium considers to be ideal benefactors of this funded project), to embed Distributed Energy Resources (DERs) into their premises and bring them towards Net-Zero Carbon Community (NZCC) status and maintaining such. For the utility systems, this project will work with device and technology manufactures in developing or adapting technologies for use in the behind the meter applications.

Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 29 of 43

To enhance and scale TGDR responsibly, the project will be managed in three overlapping phases:

- Phase-I: starting in Q2-2019, begin retrofitting a community with CA+HEMS-C, solar PV, smart inverter, battery energy storage, air-source heat-pump with thermal storage, and HEMS (smart thermostat, load controllers). If funding becomes available through other sources, we would propose adding smart lighting, and smart appliances (i.e., fridge and dryer). TGDR1 and TGDR2 will be demonstrated here, when proven with existing participants in TGDR1.
- Phase-II: starting Q2-2020, the software modules interfacing with TGDR will begin stand-alone testing in the lab. By Q2-2021, the software modules would have been interfaced with TGDR and tested before full deployment in the test communities.
- Phase-III: starting Q3-2021, after having designed and installed DERs into a second community, TGDR2 will be ready for full scale demonstration, strategizing use for achieving and maintaining a near-NZCC, running use cases, monitoring results, tweaking for enhancement, reporting and closing out the project.

Risks to Completion and Risk Mitigation Strategies

Table 2.58 - Risk to Completion & Risk Mitigation Strategies

Type of Risk (Choose an	item.²)	Mitigating Measures / Estimate Like (Choose an item. ³)	elihood	Residual Risk to Project
Large complex project with many partners that may go over budget or be delayed.	Financial	Establish rigorous utility project governance with a steering committee and a dedicated project manager along with a Project Management Office to manage the partners and their individual workstream. Create fixed budget with developers, devote great effort in the SOW, Gantt, and collaboration agreements with the partners	Medium	While project risk will be reduced with an established project management office established, there will still be some residual project risk due to unforeseen circumstances from factors not in our control (i.e., regulatory, political, economic, trial site owner issues).
As there are many elements in the TGDR2, full interoperability amongst project elements may not be achieved.	Market, Technical	TGDR2 has selected a well-defined industry standard as the interoperability approach (IEEE 2030.5). As this is well-defined, the partners will be including this in the product development.	Low	Product partners are committed to IEEE2030.5 to ensure interoperability. The standards expert on the project is engaging with others to identify the critical elements for interoperable interfaces.
Customers may be uninterested in participating in the TEM.	Market	Project includes professional resources to engage and educate participants in the TGDR2 and TEM. These resources will develop materials to inform customers upfront. The TEM will be made attractive for participants by stacking the value from all sources (i.e. utility, market, carbon, other participants). There will also be ongoing engagement through Algonquin College in communications, real-time monitoring and satisfaction survey tracking.	Medium	The Loyalty program is intended to help increase prosumer participation. Also, autonomous operation of TGDR once prosumer preferences are set should improve their acceptance of TGDR as a non-burdensome and rewarding system. The TGDR Team will also engage with the prosumers in the trial to inform and motivate them.

² Financial – e.g. project funding issues; Market – e.g. market environment, product entry; Technical – e.g. equipment failure; Regulatory – e.g. environmental approvals, permitting issues; Personnel.

³ Likelihood – Low – unlikely to occur <5%; Medium – moderately likely to occur ~25%; High – very likely to occur > 50%.

Page 31 of 43

Type of Risk (Choose an (CONT'D)	item.⁴)	Mitigating Measures / Estimate Like (Choose an item. ⁵) (CONT'D)	lihood	Residual Risk to Project (CONT'D)
Many concurrent partner work streams are dependent on each others' milestones.	Technical	The established Project Management Office will manage and track the partner milestones. There are technology milestones associated with establishing the TGDR2 and the TEM, and there are construction milestone associated with installing the DERs at the customer sites The technology milestones and construction milestones can be partially decoupled.	Medium	Should the need arise, if a technology milestone is not be met by a partner, an emulation for the partner segment can be used until ready.
Key resources may change within the partners (e.g. retirement, organizational restructuring).	Personnel	The project has engaged with partners at the highest level and have received commitment from the organization. Should individual resources change, the organization will still be able to retain the knowledge to follow through on their contributions.	Ł ow	There are no planned retirements in the next four years. Documentation and assessment of this risk will be on going.
Other government funding sources may fall through.	Regulatory	There are many funding sources available from federal, provincial and municipal sources along with government agencies and academic grants. Should any one source fall through, the Project Management Office will seek alternative sourcing from another funder.	Medium	Negotiating de-scoping with the primary funder, and any other funder, is an option, though non-ideal.
Engineering challenges and technical issues may arise with components of the TGDR2, TEM and DERs.	Technical	The project will establish a robust solution architecture upfront to ensure the engineered solution is sound and built in an interoperable manner. Once the system is launched, the project will have dedicated resources to monitor the system and respond immediately to any break-fix issues.	Low	Lessons learned from TGDR1 will be very helpful.

Type of Risk (Choose an (CONT'D)	ı item. ⁶)	Mitigating Measures / Estimate Like (Choose an item. ⁷) (CONT'D)		Residual Risk to Project (CONT'D)
Prices of some of the components of the TGDR2 may increase (i.e. cost of lithium rises, cost of silicone for solar panels rises)	Market	While the prices of project components are expected to decrease over the course of the project, should there be any temporary sharp rise in the cost of any individual component, the Project Management Office will examine pivoting scope to a lower-cost solution.	Medium	De-scoping on quantity is an option. Some products are in USD, and the CDN is forecasted to drop over the project life.
Integration of new software components with existing Hydro Ottawa's Business Support Systems	Technical	Any project outcome may need to connect to existing Hydro-Ottawa systems. Intermediary interfaces may be needed. HOL is already working with interfacing tools already. The TEM, Customer Loyalty, eWallet, BluWave, and Back-Office-System components may need to connect to existing Hydro-Ottawa systems. Some partners have done such integration in other projects. However, TGDR will be designed to rely on field generated information and not secondary handled data, so ties to Hydro Ottawa's systems may be limited or avoided.	Medium	Offline file transfer for seeding machine learning can be done. Emulation may be needed in the worst cases.

Timing Factors

The priority for innovation projects such as MiGen is high due to the potential for future savings and improved performance. However, as with any innovation project involving new technologies and interfaces, the complexity will ultimately dictate how quickly the new technology can be effectively deployed. The priority of this project will remain high unless during development there becomes a serious lack of progress, funding, or achievement of intended outcomes.

-

⁶ Financial – e.g. project funding issues; Market – e.g. market environment, product entry; Technical – e.g. equipment failure; Regulatory – e.g. environmental approvals, permitting issues; Personnel.

⁷ Likelihood – Low – unlikely to occur <5%; Medium – moderately likely to occur ~25%; High – very likely to occur > 50%.

UPDATED
May 5, 2020
Page 33 of 43

Project phase timing may be adjusted depending on material availability, site readiness, technical readiness, cashflow, regulatory or political changes.

Cost Factors

CRA is not a factor in this project because the generation capacity is below the threshold of concern (less than 250kW of solarPV on any High Voltage Distribution Station).

Include any capital contributions made or forecast to be made to a transmitter with respect to a Connection and Cost Recovery Agreement. Details to be provided include: initial forecast used to calculate contribution, amount of contribution (if any), true-up dates and potential true-up payments.

CRA is not a factor in this project because the generation capacity is below the threshold of concern (less than 250kW of solarPV on any High Voltage Distribution Station).

Factors that may change the project cost are: unforeseen site conditions that would affect installation cost; increase in material costs due to USD exchange rate; change in permitting and approval costs; unexpected increase in labour costs.

Other Factors

Success of this demonstration project will depend on customer/prosumer acceptance; however, that factor is under test in this project. Hydro Ottawa will work closely with partners and participants to identify the challenges ahead of a wider scale deployment of behind the meter technology. So, through the automation of TGDR and use of the Loyalty and eWallet components, the chance of success is anticipated to increase.

Behind-the-meter product discontinuance may be a concern, though continued support is anticipated through the collaboration agreement with the participating partners.

2.3.3.2.6. Renewable Energy Generation (if applicable)

The inverters used will be IEEE1547-2018 compliant, and this standard by nature should allow higher REG penetration levels, especially when managed through MiGenTGDR. No impact on the grid is anticipated by introducing the behind-the-meter REG devices as this would bewas assessed when selecting the sites. Nonetheless, a MiGenTGDR use case will be testing how MiGenTGDR can be used to avoid accommodation of REGs on the grid.

Capital Cost:	<mark>∼\$2,2M\$3.3M</mark> Hydro Ottawa cost (20 <mark>2119-</mark> 2022)					
O&M:	\$0.75M (2023-2025)					
Start Date:	<mark>20212018-11-20 (anticipated)</mark>					
In-Service Date:	<mark>20222021-03-31 (anticipated)</mark>					
Investment Category:	System Service Enter Investment Category					
Main Driver:	Customer and Utility Centric Non-wires solution					
Secondary Driver(s):	Improved grid management (planning & operation)					
Customer/Load Attachment	Site#1: ~39; Site#2: ~152					

Project Scope

This project will support the customer engagement and empowerment initiatives as discussed above. is an evolution from the first version and augments enhanced security, intelligence in forecasting and prediction of load profile and customer behaviour, advanced functions, shadow Transactive Energy Market, plus customer loyalty and settlement.

Work Plan

The planned initiatives will be executed in the windows listed below.

- Focusing on behind the meter technology (2021-2023)
- Developing partnerships, collaborations with vendors and stakeholders (2020-2025)
- Supporting the adoption of technology by the utility and its customers (2020-2025)

Nov./'18 - May/'19: planning; development of the requirements & system architecture document; contracting

May/'19 - Mar./'21: installation, development, integration & testing

Mar./'21 - Mar./'22: field trial, tweaking, monitoring, reporting and project close-out

Customer Impact

Immediate prosumer benefit is reduced electricity bills from self-generation, and the use of more efficient heating from air source heat pump versus electric baseboard.

Longer term benefit to a larger customer base comes from deferral or re-direction of grid growth investment that impacts largely the delivery fee. The funds can either be not-invested or redirected to reliability improvement, which is also a benefit to beyond the self-generating customer.

Should Ontario provide a Transactive Energy Market, the prosumer would receive more benefit than simply HOEP for offering their assets for shoring the grid.

Intangible benefits are: empowerment of the customer to be part of the industry transformation, and move to become a prosumer; ability to introduce more electric loads as new, replacement or supplement to other fuels; potential for choice in rate structure (eg., tiered, critical peak pricing, contracted demand, etc.).

2.3.3.3. Other Distribution Enhancements Projects

2.3.3.3.1. Program Summary

This program contains projects which make modifications to the existing distribution system in order to improve system operation efficiency and reliability. In general this involves smaller distribution system enhancements such as minor circuit reconfigurations and increasing system automation. Through this program, Hydro Ottawa's total investment over the 2021-2025 period is \$6.73M. Projects covered under this program are discussed in further detail in the following sections.

2.3.3.3.2. Program Description

Current Issues

The projects planned under the Distribution Enhancements program for the upcoming 2021-2025 rate period are primarily focused on circuit automation projects. The current issues for each category are summarized below.

The South Nepean 28kV supply will be undergoing significant upgrades in capacity to accommodate the forecasted rapid load growth over the next decade. To make available the 100 MVA of new station capacity from the New South, six feeders are planned to be extended from the new station. These feeders will be integrated to the existing South Nepean 28kV distribution system and will require means for effectively reducing outage durations by making use of redundancies and ties.

Program Scope

The overall program scope includes projects which are smaller in scale such as minor circuit reconfigurations, and adding automation to the system. Projects within the scope of the Distribution Enhancement Program are purposed to achieve network stability, increase operational efficiency, and better reliability. Outside of the program scope are larger scale modifications where the main driver is improving problematic areas with reliability issues or projects driven by capacity needs.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 37 of 43

In the period of 2021-2025, the two main project types are planned to be executed citywide under this program. Other similar needs which fall under the Distribution Enhancements category are identified through annual system reviews and will also be included in this program.

To address the need to usefully integrate the New South feeders into the rest of the South Nepean 28kV distribution system, automation will be added to strategically chosen normally open points in the region. The automated open points are selected to effectively maintain or increase feeder redundancy, reduce outage duration.

Main and Secondary Drivers

The main driver for Distribution Enhancement projects is operational effectiveness. The projects described above increase operational efficiency in a number of ways. Increasing the availability of circuit interconnections in the South Nepean 8kV region helps with operational effectiveness by utilizing the existing station capacity at Borden Farms and bringing feeders below their N-1 rating.

Secondary drivers under the Distribution Enhancement program are reliability and capacity constraints. Reconfiguring the circuits in targeted regions will ultimately improve reliability by bringing feeders under their N-1 contingency rating and make available the station capacity. Circuit automation will enhance reliability by reducing outage duration that would otherwise be longer from manual switching operations.

Performance Targets and Objectives

The System Voltage Conversion Program's Key Performance Indicator (KPI) Targets by Category are shown in Table 2.60.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 38 of 43

Table 2.60 - Key Performance Indicator Target by Category

Category	Asset Management Objective	Sub-Category	Target
Customer Oriented Performance	Levels of Service	System Reliability	Improve System Average Interruption Frequency Index (SAIFI), System Average Interruption Duration Index (SAIDI), Customer Average Interruption Duration Index (CAIDI)
Cost Efficiency & Effectiveness	Resource Efficiency	Labour Utilization	Reduce Labour Allocation to Outage Restoration
Asset Performance	Asset Value		Reduce end-of-life equipment with high probability of failure
System Operations Performance	Levels of Service	Feeder Capacity	Increase usable feeder capacity

2.3.3.3. Program Justification

Alternatives Evaluation

Alternatives Considered

The following two alternatives were considered under the Distribution Enhancements Program.

Do Nothing

This alternative involves no implementation of the above discussed projects.

The New South station will be inefficiently integrated to the greater 28kV South Nepean system if no automation is added to strategically placed normally open points. SAIDI metrics will not be improved and there will be an ongoing labour cost associated with manual switching operations.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED
May 5, 2020
Page 39 of 43

Distribution Enhancement Projects

This alternative involves implementing the circuit reconfiguration and automation projects. The South Nepean 8kV system will properly and efficiently integrate the new capacity provided by Borden Farms and bring feeder loading levels up to their N-1 planning ratings. Grid automation will be strategically added to the South Nepean 28kV system to also properly and efficiently integrate the New South station, reduce outage durations, reduce operation costs and ultimately improve SAIDI metrics.

A summary of this alternative's expenditure is shown in the table below.

Table 2.61 - Expenditures (\$'000,000s)

			Test		
	2021	2022	2023	2024	2025
Total Expenditure	\$1.31	\$2.50	\$1.26	\$0.81	\$0.85

The New South Station and the additional load it provides to the South Nepean 28kV system will require automation to be properly integrated. Automation will be added to strategically selected normally open points with the goal of reducing outage durations, accommodating forecasted load growth, and maximizing the use of redundancies and ties.

Evaluation Criteria

The two alternatives are evaluated in regards to system reliability, cost efficiency, and feeder capacity.

Preferred Alternative

Alternative 2 is the preferred alternative as it complements other Capacity Upgrades projects that have been completed or are currently ongoing increasing the value obtained from those projects.

Program Timing & Expenditure

From 2016-2020, historical spending had been dedicated to switch automation, VBM's, adding fusing or permanent switches, and minor circuit reconfigurations similar to those discussed in this

Hydro Ottawa Limited
EB-2019-0261
Exhibit 2
Tab 4
Schedule 3
Attachment E - s. 2.3.3
UPDATED

business case. Smaller scale enhancement projects were also completed with the same goals and objectives of the above discussed projects.

Future spending in the 2021-2025 period will entail the projects discussed in this report.

Table 2.62 - AS ORIGINALLY SUBMITTED - Other Distribution Enhancement Program Expenditure (\$'000,000s)

Table 2.63 - Program Benefits

Benefits	Description
System Operation Efficiency and Cost Effectiveness	The number of circuits and station transformers operating above planning rating will either be eliminated or significantly reduced. Switching operations to restore outages will be reduced in time. Costs for future station decommissioning or operating and maintenance costs will be eliminated.
Customer	The customer is benefitted by faster restoration times from the circuit reconfigurations and added system automation. Reconfiguring downtown circuits and preparing a dedicated backup for the Rideau Centre will benefit the customer and ultimately improve SAIDI and CAIDI.
Safety	N/A
Cyber-Security, Privacy	N/A
Co-ordination, Interoperability	N/A
Economic Development	The circuit reconfigurations are configured to make use of available feeder capacity and allow for future connections to the system, ultimately inviting economic development in the region.
Environment	N/A

2.3.3.3.4. Prioritization

Consequences of Deferral

Deferring the discussed Distribution Enhancement projects have various impacts on reliability, capacity, and system operational efficiency.

Inefficient integration will occur if automated open points are withheld when adding the New South into the greater 28kV South Nepean system. KPI metrics such as SAIDI will not be improved and labour costs associated with manual switching operations will continue.

Priority

Distribution Enhancements at the program level are ranked to be of high priority. This is due to the need for operational efficiency, requirement for increased or maintained reliability, constraints on capacity, consequential effects on the customer, and opportunities for improved interoperability, economic development, and environmental impacts.

UPDATED CAPITALIZATION OF OVERHEAD

2

1

Effective January 1, 2012, Hydro Ottawa revised its capitalization methodology used to apply overhead costs to property, plant, and equipment and intangible assets to be in accordance with International Financial Reporting Standards ("IFRS"). Under IFRS, International Accounting Standard 16 – *Property, Plant and Equipment* ("IAS 16") and International Accounting Standard 38 – *Intangible Assets* ("IAS 38") prohibit the capitalization of administration and other general overhead costs. As a result, the amount of capitalized overhead was significantly reduced as many of the costs that were capitalized prior to the revision of the policy were considered administrative or other general overhead. There have been no changes to Hydro Ottawa's capitalization of overhead since January 1, 2012 (and thus there have likewise been no changes since the utility's last rebasing application).

13

14 Hydro Ottawa applies overhead costs to capital through three separate burden rates: 15 Supervision burden, Engineering burden, and Supply Chain burden. The use of multiple burden 16 rates allows overhead costs to be applied more precisely to the particular projects that are

7 associated with the various types of overhead costs. Please refer to Attachment 2-4-4(A):

8 Capitalization Policy for Hydro Ottawa's capitalization policy.

19

20 As shown in **UPDATED** Attachment 2-4-5(A): OEB Appendix 2-D - Overhead Expenses, the

21 overhead costs capitalized (including labour and fleet) from 2017-2021 are in the range of 26%

22 to 29%.

UPDATED - Appendix 2-D Overhead Expense

Applicants are to provide a breakdown of OM&A before capitalization in the below table. OM&A before capitalization may be broken down by cost center, program, drivers or another format best suited to focus on capitalized vs. uncapitalized OM&A.

UPDATED LOAD FORECAST

2

1

3 1. INTRODUCTION

- 4 Hydro Ottawa engaged Itron to complete a 2021-2025 sales and energy forecast for the utility.
- 5 Itron completed forecasts for total energy and demand sales by rate class, total number of
- 6 customers and connections, and billing demand. The sale and energy forecast utilized actual
- 7 data on sales, customer numbers and connections, and actual purchases through December
- 8 2019. Forecasts were provided both with and without the impact of future Conservation and
- 9 Demand Management ("CDM") targets.

10

- 11 A sales forecast model was used. For details regarding the forecast methodology, including
- 12 CDM persistence and future targets, economic assumptions, and data sources, please see the
- 13 following Attachments:

5 5. CDM ADJUSTMENTS

6 Tables 6 and 7 below summarize Hydro Ottawa's CDM adjustments to its load forecast. The 7 CDM adjustments are comprised of assumptions related to the following:

8

9

10

13 14

3

4

- Projected CDM savings from projects that are subject to contractual agreements between the utility and customers, made on or before April 30, 2019;
- Estimated rate base savings, as outlined in Exhibit 4-1-6: Conservation and Demand
 Management; and
 - Estimated impacts related to the continuation of CDM programs which are still being administered at the provincial level (i.e. by the Independent Electricity System Operator ["IESO"]).

16

15

17 Table 6 provides Hydro Ottawa's sales forecast CDM adjustments by MWh for 2021-2025.

HYDRO OTTAWA

1 Overview

Itron, Inc. recently completed the 2020 to 2025 Hydro Ottawa sales and energy forecast. The forecast is based on actual sales, customer, and purchase data through December 2019. Forecasts are derived for rate class sales, customers, billing demands, system purchases and system peak demand. This document presents forecast results, assumptions, and an overview of the forecast methodology.

Hydro Ottawa serves approximately 311,500 residential customers and 28,300 nonresidential customers. Total 2019 sales equaled 7,241 GWh with a system peak of 1,398 MW. Residential customer class accounts for approximately 31% of system sales, small commercial 10% of sales (less than 50 kW), medium commercial customers 34% of sales (50 kW to 1,000 kW), and large commercial and industrial (greater than 1,000 kW) 24% of sales; Street lighting, municipal, and DCL account for remaining sales.

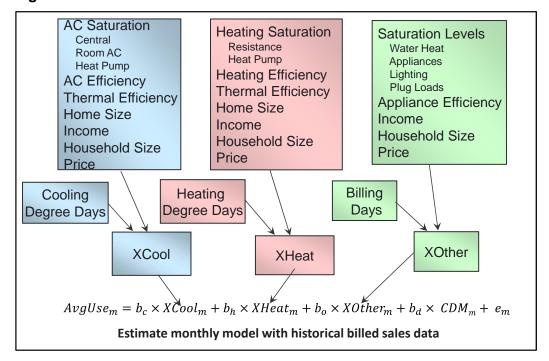

Over the last five years economic growth has been relatively steady with GDP averaging 2.1% annual growth; employment has been averaging 1.3% annual growth and population 1.6% per year annual growth. Yet despite this growth, electricity sales have been declining; weather-normalized sales averaged 0.7% decline between 2014 and 2019. Residential sales have declined 0.1% even while adding 25,000 customers over this period. The largest decline in sales is in the nonresidential rate classes where sales have been falling 1.0% per year.

Improvements in energy efficiency are a significant contributor to decline in electric sales. New end-use standards, improvements in thermal shell integrity, and energy-efficiency program activity (CDM) have more than compensated for increase in regional population growth and business activity. To capture the efficiency trends, forecasts for the residential and commercial rate classes are estimated using a Statistically Adjusted End-Use Models (SAE) modeling framework. The modeling approach entails explicitly incorporating end-use energy intensity trends as well as population growth, economic activity, and weather conditions into the constructed monthly model variables for cooling (XCool), heating (XHeat), and other uses (XOther). Figure 1 shows the general residential SAE modeling framework.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 2 of 45

HYDRO OTTAWA

Figure 1: Residential SAE Model Framework

Estimated SAE model coefficients – b_c , b_h , and b_o calibrate end-use load estimates (XCool, XHeat, and XOther) to actual billed customer usage. Estimated monthly CDM savings are included as a separate variable to capture program efficiency impacts not captured by end-use intensities. Projections of end-use intensities, economic activity, weather conditions, and CDM drive monthly average use. Residential sales are estimated by combining average use forecast with residential customer forecast. A similar SAE specification is used for the commercial rate classes, but models are estimated using total sales rather than average use.

The forecast is derived from monthly regression models estimated for both rate classes and system peak; system purchases are derived by applying an average loss factor to rate-class sales forecast. Rate class sales, and customer forecast models are estimated for the following rate classes.

- Residential
- GS50 (less than 50 kW)
- GS1000 (50 kW 1000 kW)
- GS1500 (1000 kW to 1500 kW)
- GS5000 (1500 kW to 5000 kW)
- Large Users (5000 kW plus)
- Street Lighting
- MU
- DCL

HYDRO OTTAWA

Residential sales forecast is derived as the product of average use and customer forecast. The commercial and other customer classes are based on total sales models. Models are estimated with monthly sales beginning in 2013. Starting in 2013, Hydro Ottawa changed the method used in estimating monthly customer class sales. The new method significantly improved the historical data series that in turn allows us to estimate relatively strong statistical-based sales forecast models. Table 1 shows the rate class sales forecast.

Table 1: Rate Class Forecast

				Class Sales	s Forecast (MWh)

System purchase and peak demand forecast are driven by underlying sales forecast. Purchases are calculated as the product of the total sales forecast and monthly adjustment factors that reflect both system losses and timing between monthly sales estimates and monthly purchases. The system peak forecast is derived from a monthly regression model that relates peak demand to heating, cooling, and base-use loads and peak-day weather conditions. Heating, cooling, and base-use load estimates are derived from the rate class sales forecasts. Table 2 shows actual sales, purchases, and peak demand through 2019 and forecast starting in 2020.

Table 2: System Forecast

Year	Total Sales (MWh)	chg	System Purchases (MWh)	chg	Peak Demand (MW)	chg

2 Forecast Data and Assumptions

2.1 Historical Class Sales and Energy Data

Rate class linear regression models are estimated using monthly billed sales and customer data from January 2013 through December 2019. Prior to 2013 the monthly billed sales data is a poor measure of what was actually used during the calendar month; unbilled sales estimates were significantly improved beginning in 2013. In the prior rate-case forecast, the poor rate class data quality required us to calibrate initial rate class sales forecast to a monthly purchase sales forecast. In this forecast there is no calibration process as there is enough historical monthly rate class sales data that is consistent with monthly weather conditions to estimate relatively strong statistical-based models.

System peak demand forecast is based on reported monthly peaks from January 2013 to December 2019. While demand data is available prior to 2013, as this year's is a total "bottom-up" forecast driven by rate class forecast, there is no need for demand data prior to this point. System purchases are not directly used in the forecast. System purchases are used

to calculate average monthly "loss" factors based on the historical relationship between monthly purchases and retail sales over the four-year period 2015 to 2018.

2.2 Weather Data

Actual and normal Heating Degree Days (HDD) and Cooling Degree Days (CDD) are calculated from daily average temperature and dew point data for Ottawa. Generally, degree-days are expressed with a basis of 18 degrees Celsius. We found we can improve on the forecast model statistical fit by defining HDD with 13 degree-day bases as there is little heating when temperatures are above 13 degrees. Between 13 degrees and 18 degrees there is little heating or cooling. Figure 2 illustrates this point.

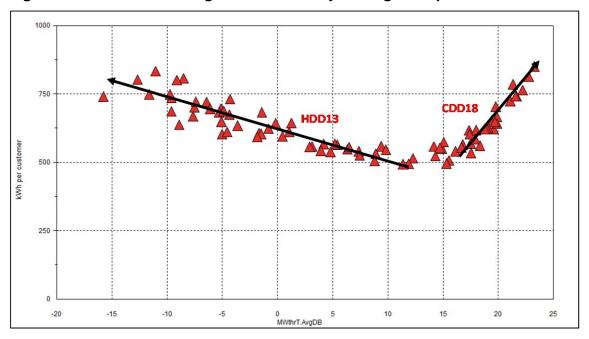

Figure 2: Residential Average Use vs Monthly Average Temperature

Normal monthly degree-days are calculated as an average of monthly degree-days over the past twenty years – 1999 through 2018.

Peak-Day Weather Variables

Monthly peak-day HDD and TDD (temperature-humidity based degree-days) are used in forecasting peak demand. Peak-day degree-days are based on the average daily temperature and dew point that occurs on the day of the monthly peak. TDD is a two-day weighted temperature as we found prior-day temperature has a significant impact on demand. The weights are 55% for the day of the peak and 45% for the day prior to the peak.

The appropriate breakpoints for the HDD and weighted TDD variables are determined by evaluating the relationship between monthly peak and the peak-day average temperature as shown in Figure 3.

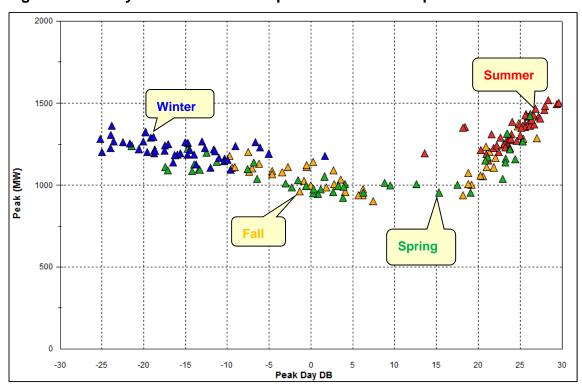

Figure 3: Monthly Peak Demand /Temperature Relationship

From the scatter plot (and initial regression models) the "best" fit TDD variable is where TDD is defined with a THI base of 13 degrees and the best breakpoint for calculating the peak-day HDD variable is 10 degrees.

Normal peak-day HDD and TDD are derived as a twenty-year average using a *rank and average* approach. This approach entails first finding the highest HDD and TDD that occurred in each month over the last twenty years (1999 to 2018), and within each year ranking the degree-days from the highest to the lowest value so that there are 12 monthly ranked HDD and TDD in each year. The ranking across the years are then averaged effectively generating peak-weather TDD and HDD duration curves with 12 average values. The ranked-average TDD and HDD are assigned to specific months based on that peakmonth TDD or HDD is most likely to occur. The highest weighted TDD is assigned to July, the next highest August, the third highest June, and so forth. The highest HDD value is assigned to January, the next highest to February, the third highest to December, and so forth.

2.3 Economic Data

Rate class sales forecasts are based on the Conference Board's November 2019 economic forecast for the Ottawa and Gatineau area. The primary economic drivers are population, real personal income (RPI), GDP, and Employment. Table 3 shows the historical and forecasted economic drivers.

Table 3: Ottawa Regional Economic Forecast

Year	Population (000's)	Chg	GDP (Millions \$)	Chg	RPI (Millions \$)	Chg	Employment (000's)	Chg

2.4 Appliance Saturation and Efficiency Trends

End-use intensities are calculated from end-use saturation estimates (the share of homes that own a specific appliance) and measure of equipment efficiency. As saturation increases, energy intensity increases. As efficiency improves end-use intensity decreases. Declining customer average use is largely attributable to efficiency gains that have been stronger then increases in end-use saturations. Starting residential end-use intensity estimates are based on the Energy Information Administration (EIA) historical and projected end-use saturation, stock efficiency and appliance usage data from the 2019 Annual Energy Outlook (AEO). The AEO forecast is based on the National Energy Modeling System (NEMS) which includes end-use forecast modules for the residential and commercial sectors. Residential data derived from NEMS database include:

- End-use consumption
- End-use stock energy efficiency (for some measures and UECs for others)
- End-use appliance stock (number of existing units)
- End-use saturation (calculated from number of units and number of households).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 8 of 45

HYDRO OTTAWA

EIA develops end-use forecasts for nine census division. The end-use intensity forecasts are based on the Mid-Atlantic Census Division which includes New York. Intensities are modified to reflect Ontario end-use saturation trends; historical and forecasted end-use saturations are calibrated to reported saturation data from Natural Resources Canada for Ontario (NRCan). We assume that the end-use average stock efficiency in Hydro Ottawa's service territory is similar to that of the Mid-Atlantic Census Division.

Figure 4 shows the resulting end-use intensities aggregated to Heating, Cooling, and Other Use. Figure 5 gives a breakdown of Other Use by end-use detail.

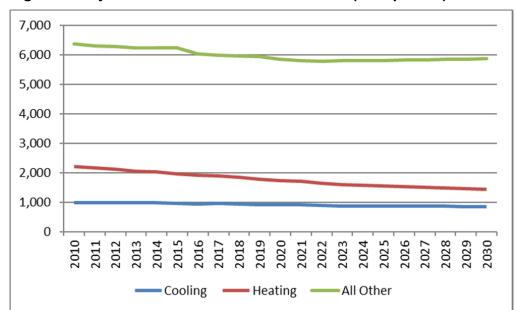

Figure 4: Major Residential End-Use Intensities (kWh per HH)

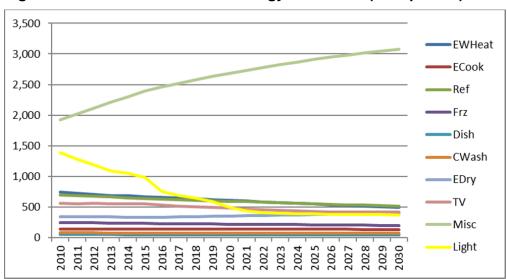

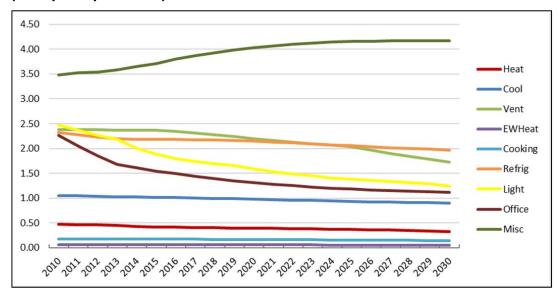

Figure 5: Residential Other Use Energy Intensities (kWh per HH)

End-use intensities are generally declining as efficiency is increasing faster than appliance ownership. Most end-uses intensities change slowly over time as appliances are replaced with more efficient options. The exceptions are lighting and miscellaneous which are also the two largest end-uses. Lighting intensity has declined sharply over the past 5 years with the phase-in of new lighting standards and increase in LED market share. Miscellaneous sales growth has been countering some of the impact of declining lighting use; miscellaneous includes everything from home electronics to electric outdoor equipment.

EIA provides commercial end-use forecast by building type. There are 11 building types and 9 end-uses. End-use data includes consumption and square footage. Commercial end-use intensities are derived by dividing commercial end-use consumption by square footage. Other than the miscellaneous end-use, commercial end-use energy intensities are either flat or declining. Figure 6 shows commercial end-use intensity trends.

Figure 6: Historical and Projected Commercial End-Use Intensities (kWh per square foot)

2.5 Conservation and Demand Management (CDM)

End-use intensity projections also reflect regional conservation activity. EIA model's efficiency program impacts by reducing the costs (through "rebates") of the more efficient technology options. For Ottawa, sales and average use decline even faster than that reflected in the end-use intensity projections. Differences is likely due to more CDM activity than that embedded in the estimated model and end-use intensity trends. To capture additional CDM savings, cumulative CDM savings are included as a model variable. Historical and forecasted CDM are estimated for each rate class. Cumulative CDM forecast is summarized in Table 4.

Table 4: CDM Forecast

Cumulative CDM Saving (MWh)								
Year	Residential	Small Commercial	Commercial	Street Light				
2020	11,137	19,564	128,540	4,945				
2021	14,747	23,948	144,582	5 <i>,</i> 756

HYDRO OTTAWA

3 Forecast Methodology

3.1 Class Sales Forecast

Changes in economic conditions, weather conditions, end-use energy intensity trends, and CDM drives electricity use and demand through a set of monthly rate class regression models. Models are estimated for the following rate classes:

- Residential
- GS50 (Less than 50 kW)
- GS1000 (50 kW 1000 kW)
- GS1500 (1000 kW 1500 kW)
- GS5000 (1500 KW 5000 kW)
- Large Users (Over 5000 kW)
- Street Lighting
- MU
- DCL

3.1.1 Residential Model

The residential monthly sales forecast is derived as the product of the average use and customer forecast. The forecast captures population and income growth as well improvements in energy efficiency through an SAE model specification.

Average Use Forecast

Residential average use is modeled as a function of heating requirements (XHeat), cooling requirements (XCool), and other use (XOther). Cumulative CDM savings are incorporated to capture program savings not captured in the end-use model variables. The general specification for the average use model is:

$$AvgUse_m = B_0 + (B_1 \times XHeat_m) + (B_2 \times XCool_m) + (B_3 \times XOther_m) + (B_4 \times CDMPerCust_m) + e_m$$

Model variables – Xheat, XCool, and XOther account for both economic activity and improvements in end-use efficiency. XHeat for month m is calculated as:

$$XHeat_m = HDDIdx_m \ x \ IncIdx^{0.15}_m \ x \ HeatIntensity_a$$

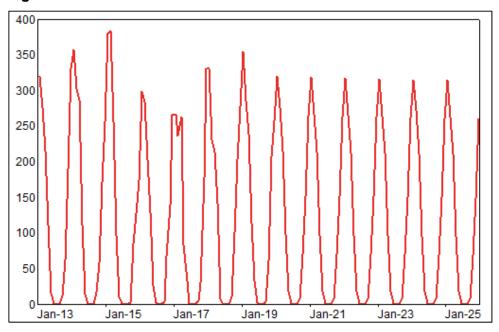

Where

• $HDDIDX_m$ = an index of monthly actual and normal HDD

- $IncIdx_m$ = indexed per capita income (a 0.15 elasticity is applied to capture small impact on heating use)
- $HeatIntensity_a$ = annual end-use heating intensity trend (kWh per household)

As *HeatIntensity* is measured in kWh and HDD and Income are indexed, the result is an estimate of historical and forecasted monthly heating kWh use. Figure 7 shows the calculated XHeat variable.

Figure 7: Residential XHeat Variable

XCool is derived in a similar manner:

 $XCool_m = CDDIdx_m x IncIdx^{0.15}_m x CoolIntensity_a$

Where

- $CDDIDX_m$ = an index of monthly actual and normal CDD
- $IncIdx_m$ = indexed per capita income (a 0.15 elasticity is applied to capture small impact on heating use)
- $CoolIntensity_a$ = annual end-use cooling intensity trend (kWh per household)

Figure 8 shows the calculated XCool variable.

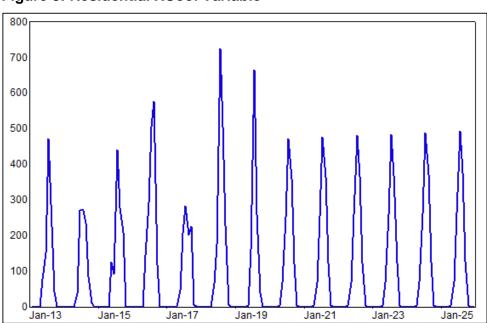

Figure 8: Residential XCool Variable

XOther captures non-weather sensitive end-use

 $XOther_m = DaysIdx_m \ x \ IncIdx^{0.15}_m \ x \ OtherIntensity_a \ x \ MonthlyMultiplier_m$

Where

- $DaysIdx_m =$ an index for the number of days per month
- $IncIdx_m$ = indexed per capita income (a 0.15 elasticity is applied to capture small impact on heating use)
- OtherIntensity_a= annual non-weather sensitive end-use intensity trend (kWh per household)
- $MoMultiply_m$ = monthly end-use usage fraction (fraction of annual usage)

Figure 9 shows the calculated XOther variable.

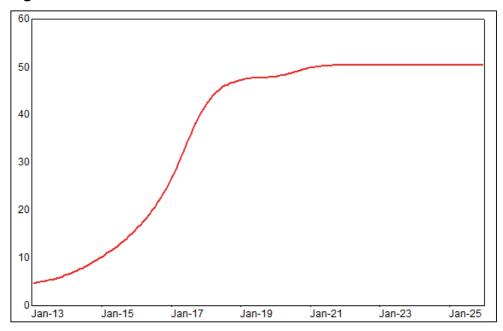

Figure 9: Residential XOther Variable

The monthly pattern reflects both estimated number of days and relative amount of end-use energy use across the months. More lighting and water heating load occur in the winter months than summers months and slightly more refrigeration and freezer loads occur in the summer months than winter months.

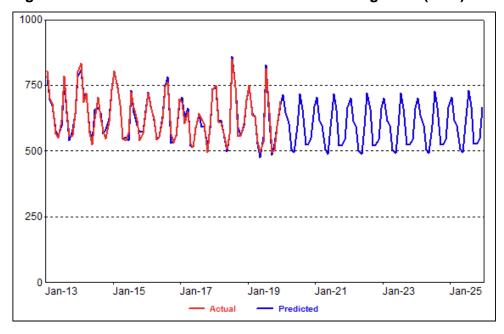

Cumulative CDM starts in 2013 at an estimated average per customer 5 kWh per month (60 kWh per year) and increases to 48 kWh per month (576 kWh per year) by 2019. Projected CDM growth slows considerably after 2019 reaching 50 kWh per month by 2021. Figure 10 shows the residential per customer CDM projections.

Figure 10: Residential Per Customer CDM

Residential average use model is estimated as a function of Cooling, Heating, Other Use, and CDM per customer savings over the period January 2013 through December 2019. The model is used in generating average use forecast through December 2025. Figure 11 shows actual and predicted average use.

Figure 11: Actual and Predicted Residential Average Use (kWh)

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 16 of 45

HYDRO OTTAWA

The estimated model explains historical sales well with an Adjusted R-Squared of 0.96 and a mean absolute percent error (MAPE) of 2.0%. The model variables are all strongly statistically significant. The model also includes binary variables for March, April, May, and November and shifts in usage in 2015 and 2016 that can't be explained by available data. Estimated model coefficients, coefficient statistics, and model statistics are included in Appendix A.

Customer Forecast

The customer forecast is based on a monthly regression model that relates number of customers to population projections; the correlation between number of customers and population is extremely high at 0.98. Monthly binaries are included to capture small variation in monthly customer counts.

Figure 12 shows actual and predicted customers.

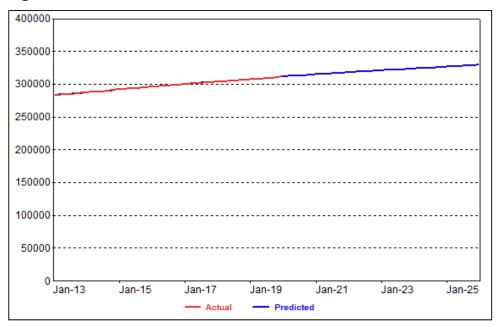

Figure 12: Actual and Predicted Residential Customer

While number of customers continue to increase, the rate of growth is slowing along with the population. Over the last five years Hydro Ottawa added on average 3,950 new customers per year down from 4,430 customers per-year in the prior five-year period. Based on population projections, customer growth is expected to increase approximately 3,000 per year over the next five years.

Sales Forecast

The residential sales forecast is the product of average use and customer forecast. Table 5 shows annual average use, customer, and resulting sales forecast. Forecast begins in 2020.

Table 5: Residential Forecast

Residential Forecast								
	Average Use				Sales			
Year	(kWh)	chg	Customers	chg	(MWh)	chg		
2013	7,919		284,964		2,256,550

2017	7,252	-4.4%	301,839	1.3%	2,188,889	-3.2%		
2018	7,591	4.7%	305,390	1.2%	2,318,157	5.9%		
2019	7,321	-3.6%	309,165	1.2%	2,263,478	-2.4%		
2020	7,200	-1.7%	313,134	1.3%	2,254,425	-0.4%		
2021	7,122	-1.1%	316,346	1.0%	2,252,938	-0.1%		
2022	7,119	0.0%	319,386	1.0%	2,273,819	0.9%		
2023	7,134	0.2%	322,306	0.9%	2,299,366	1.1%		
2024	7,176	0.6%	325,150	0.9%	2,333,197	1.5%		
2025	7,175	0.0%	327,975	0.9%	2,353,150	0.9%		
2013-19		-1.3%		1.4%		0.1%		
2020-25		-0.1%		0.9%		0.9%		

3.1.2 Commercial Forecast Models

Like the residential model, the commercial SAE sales models express monthly sales as a function of heating requirements (XHeat), cooling requirements (XCool), other use (XOther), and CDM sales. Hydro Ottawa has multiple commercial rate classes that are defined by customer demand requirements. While separate sales forecast models are estimated for each rate class, the model structure is basically the same:

 $ComSales_m = B_0 + B_1XHeat_m + B_2XCool_m + B_3XOther_m + B_4CDM_m + e_m$

- $XHeat_m = EI_{heat} \times EconVar_m \times HDD_m$
- $XCool_m = EI_{cool} \times EconVar_m \times CDD_m$
- $XOther_m = EI_{other} \times EconVar_m$

Where:

EI = Annual energy intensity (kWh per square feet)

EconVar_m = Economic driver for month m

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 1
Schedule 1
Attachment C
UPDATED
May 5, 2020
Page 18 of 45

HYDRO OTTAWA

The commercial end-use intensities (EI) are aggregated into heating, cooling, and other use; intensities incorporate both end-use saturation increases and improvements in efficiency. The economic variable (EconVar_m) is weighted between population and GDP. Population captures increase in market size and GDP overall business activity. Employment was also evaluated as model driver but provided no additional information than that captured by population and GDP growth. The weights are slightly different for small commercial and large commercial rate classes; the weights are equal for the small commercial rate class with higher weighting on GDP for the larger rate classes:

• $SmlEconVar_m = Pop_m^{0.5} \times GDP_m^{0.5}$ • $LrgEconVar_m = Pop_m^{0.2} \times GDP_m^{0.8}$

The weights are determined by evaluating out of sample model fit statistics for different sets of weight. The variables are geometrically weighted as population and GDP are measured on different scales.

Commercial sales models are estimated over the period January 2013 to December 2019. The model in-sample fits are relatively strong with Adjusted R-Squared ranging from 0.88 to 0.94 and MAPEs of 1.6% to 2.7%

Since 2013, GS1000 customers have been migrating to interval metering; interval metered customers (GS1000I) are priced with a different billing structure than non-interval customers (GS1000NI). A simple trend-based share model is used to disaggregate sales between the two services.

Figure 13 shows actual and predicted (declining) share of non-interval sales.

0.800 0.700 0.600 0.500 0.400 0.300 0.200 0.100 0.000 Jan-13 Jan-15 Jan-17 Jan-19 Jan-21 Jan-23 Jan-25 - Actual - Predicted

Figure 13: Actual and Predicted GS1000NI Share

Forecast for GS1000NI sales are derived as the product of the non-interval share and GS1000 sales forecast. Forecast for GS1000I is calculated as GS1000 sales forecast less GS1000NI sales forecast.

Figure 14 to

Figure 17 shows actual and predicted sales for the commercial rate classes. Estimated model coefficients and model statistics are included in Appendix A. Model predicted results include CDM except for the GS1500 and GS5000 rate classes. For GS1500, GS5000, Large Users, MU and Street Lighting CDM adjustments are made by subtracting future CDM savings from the model predicted results.

2019	724,441	-0.5%	2,488,687	-0.9%	392,965	-7.9%	723,018	-0.1%
2020	707,565	-2.3%	2,451,501	-1.5%	386,744	-1.6%	701,742	-2.9%
2021	699,870	-1.1%	2,431,951	-0.8%	385,754	-0.3%	682,921	-2.7%
2022	699,135	-0.1%	2,436,147	0.2%	386,993	0.3%	682,300	-0.1%
2023	697,637	-0.2%	2,440,940	0.2%	388,277	0.3%	682,504	0.0%
2024	697,775	0.0%	2,451,437	0.4%	390,553	0.6%	684,408	0.3%
2025	695,838	-0.3%	2,451,289	0.0%	391,593	0.3%	683,533	-0.1%
2013-19		0.1%		-1.1%		2.5%		-2.7%
2020-25		-0.3%		0.0%		0.2%		-0.5%

Separate models are estimated for commercial customers. GS50 customers are driven by the number of residential customers as the correlation between GS50 customers and residential customers is 0.97. A simple linear trend model is used to forecast customers for the GS1000 rate classes (non-interval and interval-meter classes) as customers have been migrating from non-interval rate class to the interval rate class. There has been no increase in the number of GS1500 and GS5000 customers; customer forecast is held constant at current levels. Table 7 shows the commercial customer forecast.

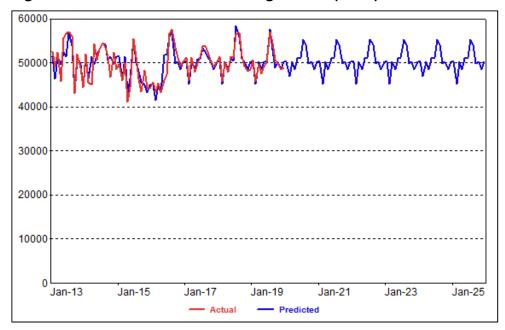

Table 7: Commercial Customer Forecast

Year	GS 50	chg	GS 1000	chg	GS 1500	chg	GS 5000	chg
2013	23,936		3,349		59		76

2025	25,987	0.5%	2,903	-1.3%	73	0.0%	68	0.0%
2013-19		0.7%		-1.2%		2.7%		-1.7%
2020-25		0.6%		-1.1%		0.0%		0.0%

3.1.3 Other Rate Classes: Large Users, Street Lighting, MU, DCL

Generalized econometric models are estimated for Large Users, as well as the Street Lighting, MU, and DCL. The Large User class includes Hydro Ottawa's eleven largest customers. Large User sales have been relatively constant since 2016. We assume that sales continue at this level over the next five years. Figure 18 shows actual and predicted large user sales.

Figure 18: Actual and Predicted Large Users (MWh)

^{*} Predicted value excludes the impact of CDM, adjustment made outside of model

Street Lighting sales have been declining as part of lamp efficiency improvements. The forecast is derived by holding current street lighting sales constant and then adjusting for expected savings from further CDM street lighting activity. Figure 19 and Figure 20 show model results and forecast adjusted for additional CDM savings projections.

Figure 19: Actual and Predicted Street Light (MWh)

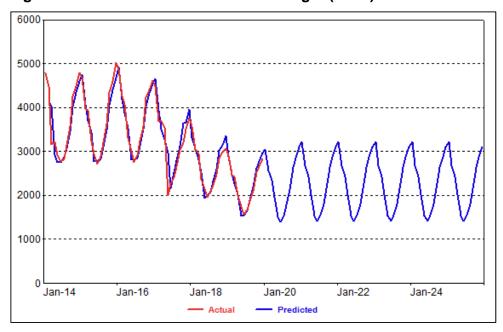

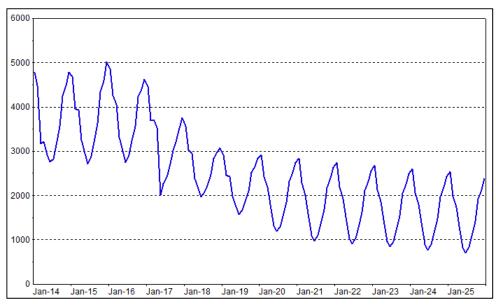

Figure 20: Street Light CDM Adjusted

The MU and DCL classes are both small rate classes with little sales. Given there is little information to explain sales trends, models are estimated with simple exponential smoothing models. The estimated model coefficients and model statistics are included in Appendix A. MU sales are adjusted for future CDM.

3.1.4 Billing Demand Forecast

Several commercial rate classes include billing demand as well as sales and customer forecasts. Billing demand is a measure of a customer's highest hourly demand over the billing period. Monthly billing demand regression models are estimated for each rate class. Demands are modeled as a function of monthly sales and monthly binary variables. The models are estimated with actuals from January 2013 to December 2019. Table 8 shows rate class billing demand forecast.

Table 8: Class Demand Forecast

	Class Billing Demand (MW)

3.1.5 Adjustments for CDM

Estimated historical and forecasted CDM savings are directly incorporated into the estimated rate class sales forecast models; cumulative historical CDM are included as a separate model variable. In the residential average use model CDM is on a per customer basis and in the commercial models on a total MWh savings basis.

There are two reasons to include CDM as a model variable. First, adding CDM helps explain the declining customer usage and as a result improves on the model fit statistics. Second, it helps avoid double-counting savings. The SAE models already have strong efficiency built into the heating, cooling, and other use model variables; some the end-use improvements are due to CDM activity. The CDM coefficient reflect the CDM savings not already captured in the SAE model structure. If none of the CDM savings were captured by the SAE specification, we would expect the coefficient on CDM to be -1.0. If all the CDM impacts were already captured by the model the coefficient would be close to 0 or statistically insignificant.

In the residential model the CDM coefficient is -0.70. This implies that 30% of the CDM savings is already accounted for in the end-use intensity trends and estimated coefficients on

HYDRO OTTAWA

the heating, cooling, and base-use variables. For the forecast period, 70 percent of future DSM savings will flow into the model-based forecast; 30% of remaining CDM savings is captured by the SAE specification. In the small commercial model, the coefficient on CDM is -1.06 and -1.15 in the GS1000 sales forecast model. The coefficients imply that the SAE structured variables are not accounting for CDM program savings. CDM coefficients are actually lower than -1.0 implying that estimates of rate class CDM sales are too low. This may be the result of the CDM allocation process to rate schedules – not enough CDM is allocated to the rate classes. The coefficient on the CDM variable in the GS1500 and GS5000 models are statistically insignificant; CDM was dropped as a model variable.

Sales impact from future CDM savings are derived by executing savings projections through the estimated model where CDM is included as a model variable and treated as in the past (subtracted from the forecast model estimate) for GS1500, GS5000, Street Lighting, and MU.

Figure 21 compares the forecast with and without CDM adjustments. Excluding additional CDM activity, sales are projected to average 0.6% annually between 2020 and 2025. CDM reduces annual sales growth by 0.5% over the next five years to 0.1%.

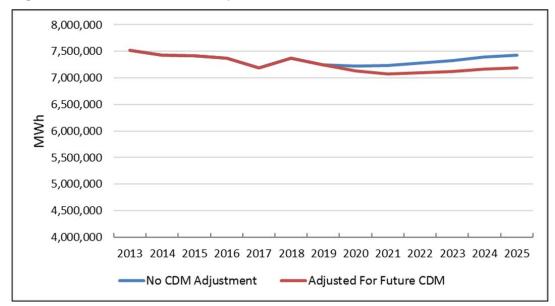

Figure 21: CDM Forecast Comparison

3.2 System Purchase and Peak Demand Forecast

System purchases are calculated by applying monthly adjustment factors to monthly sales forecast. The adjustment factors capture system losses and any differences in timing between estimated monthly sales and measured system purchases. The monthly adjustment factors are based on the historical relationship between purchases and sales between January 2015

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 28, of 45

HYDRO OTTAWA

and December 2019. While there is some small monthly variation, the average adjustment factor is 1.03; the sales forecast is adjusted up three percent.

The system peak forecast is derived through a monthly regression model that relates monthly peak demand to heating, cooling, and base load requirements:

$$Peak_m = B_0 + B_1 Heat Var_m + B_2 Cool Var_m + B_3 Base Var_m + e_m$$

System peak is effectively driven by the purchase sales forecast. The model variables $(HeatVar_m, CoolVar_m, and BaseVar_m)$ incorporate changes in heating, cooling, and base-use energy requirements derived from the rate class sales forecast models as well as peak-day weather conditions. Efficiency impacts on peak are captured through the constructed model variables.

Heating and Cooling Model Variables

The variable *HeatVar*, is derived by combining peak-day HDD (*PkHDD*) with an estimate of monthly heating requirements (*HeatLoad*):

 $HeatVar_m = HeatLoad_m \times PkHDD_m$

Heatload is derived from the rate class sales forecast models as the product of the coefficient of the XHeat variable times XHeat for normal weather conditions:

 $HeatLoad_m = B_1 \times NrmXHeat_m$

The peak-day cooling variable is constructed in a similar manner. CoolVar is calculated as:

 $CoolVar_m = CoolLoad_m \times PkTDD_m$

Where

 $CoolLoad_m = B_2 \times NrmXCool_m$ (Derived from the estimated rate class models) PkTDDm = Peak-day THI degree-day

Figure 22 and Figure 23 show the peak model heating and cooling variables.

Figure 22: Peak XHeat Variable

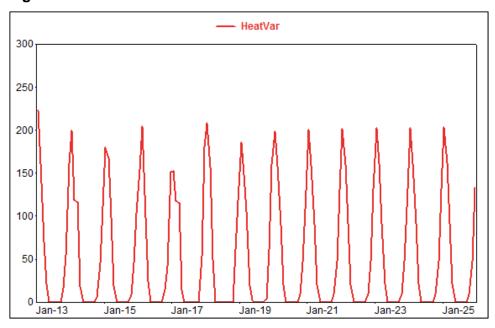

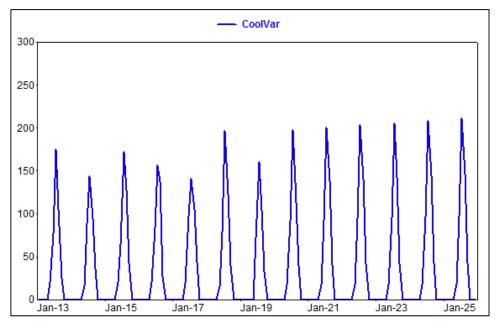

Figure 23: Peak XCool Variable

BaseVar Model Variable

BaseVar captures growth in non-weather sensitive usage at the time of the peak. It is again derived from the sales forecast models. BaseVar is calculated by subtracting weather-normal cooling and heating load requirements from weather normal total purchases and forecast.

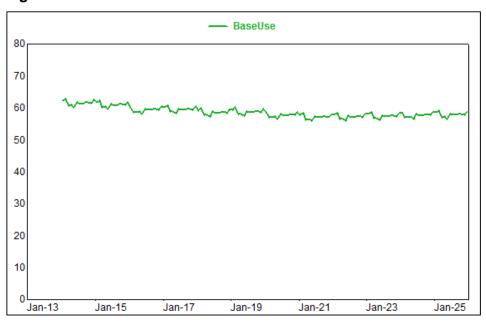

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 1 Attachment C UPDATED May 5, 2020 Page 30 of 45

HYDRO OTTAWA

 $BaseVar_m = WNSales_m - HeatLoad_m - CoolLoad_m$

BaseVar is expressed on an average monthly MW basis by dividing BaseVar by the number of hours in the month. Figure 24 shows the derived model variable BaseVar.

Figure 24: Peak Base Variable

In addition to the end-use variables, the peak model includes monthly binaries for several months to account for non-weather seasonal changes in demand and a shift variable to account for increase in demand after 2016. The model explains past variation relatively well with an adjusted R-squared is 0.87 with a MAPE of 2.9%. Model statistics are included in Appendix A. Figure 25 shows actual and predicted monthly system peak.

Figure 25: Actual and Predicted Peak Model (MW)

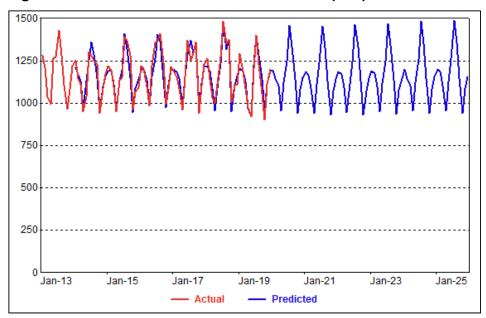

Table 9 shows system purchase and peak demand forecast.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 2 **UPDATED** May 5, 2020 Page 1 of 14

UPDATED ACCURACY OF LOAD FORECAST AND VARIANCE ANALYSES

2

1

3 1. INTRODUCTION

- 4 Hydro Ottawa's last rebasing application was filed in April 2015 for a Custom Incentive
- 5 Rate-Setting ("Custom IR") framework for the 2016-2020 period. As per the OEB Decision and
- Order and Approved Settlement Agreement governing the utility's 2016-2020 rate plan, Hydro
- 7 Ottawa has used the detailed five-year load forecast that was included in the original 2016-2020
- 8 rebasing application for each of the annual rate adjustment applications which was submitted to
- 9 the OEB over the course of the corresponding rate term.²

10

- 11 As outlined in **UPDATED** Exhibit 3-1-1: Load Forecast, Hydro Ottawa has prepared a new
- 12 five-year detailed load forecast for the 2021-2025 period, as part of this Application. Hydro
- Ottawa retained the services of a third-party expert (Itron) for the purpose of preparing this load
- 14 forecast. The utility confirms that it did not develop a detailed load forecast in between the filings
- 15 of its 2016-2020 and 2021-2025 Custom IR applications.

16

17 2. HISTORICAL ACCURACY OF LOAD FORECAST

- Hydro Ottawa has provided UPDATED Attachment 3-1-1(A): Appendix 2-IB Load Forecast
- Analysis, which summarizes the data and develops year-over-year trends in historical and
- forecast customer counts, consumption, demand, and revenues. The utility completed Appendix
- 21 2-IB, as originally submitted, with the following inputs:

22 23

24

- 2016-2018 actual sales, demand, customer count and connections, and distribution revenue;
- 25 2016-2018 actual weather-normalized sales and demand;
- 2019-2020 updated load forecast and approved distribution revenue; and 26
- 27 2021-2025 proposed load forecast and proposed distribution revenue.

²⁸ ¹ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-Setting Distribution Rate Application*, EB-2015-0004 (April

 ^{29, 2015).} Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 2 UPDATED May 5, 2020 Page 2 of 14

1 Hydro Ottawa completed the UPDATED Appendix 2-IB with the following inputs:

2

4

5

- 2016-2019 actual sales, demand, customer count and connections, and distribution revenue;
- 2016-2019 actual weather-normalized sales and demand;
- 2020 updated load forecast and approved distribution revenue; and
 - 2021-2025 proposed load forecast and proposed distribution revenue.

8

7

- 9 For details regarding the class level assumptions and data sources in the load forecast, please
- 10 see **UPDATED** Attachment 3-1-1(A): Appendix 2-IB Load Forecast Analysis, which provides
- 11 year-over-year trending of key components of the load forecast, as follows:
- Customers / connections
- Historical, actual, and weather-normalized load (kWh)
- Consumption per customer / connection
- Demand (kW)
- 16 Revenue

18 19

20

17 The following observations can be derived through the analyses included in Appendix 2-IB:

- Consumption (kWh) will rise through the 2021-2025 forecast period, while remaining lower than the peak year of 2016;
- Demand (kW) shows a gradual downward trend on average throughout the forecast period; and
- Customer count and connections are set to continue following expected trends, in line with anticipated growth in the City of Ottawa's population.

- 26 Tables 1 through 12 in this Schedule summarize Hydro Ottawa's 2016-2020 OEB-approved load
- 27 forecast and compare its data to both 2016-2018 Historical and 2019-2020 Bridge Year data. As

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 1 Schedule 2 UPDATED May 5, 2020 Page 3 of 14

- 1 part of the update for 2019 actuals, Hydro Ottawa has provided 2019 Historical data, where
- 2 applicable, for Tables 1 through 12.

3

5

- 4 Table 1 below provides Hydro Ottawa's energy sales forecast by MWh for 2016-2020.
- Table 1 2016-2020 Energy Sales Forecast By Customer Class (MWh)

	2016	2017	2018	2019	2020
Residential	2,216,045	2,198,259	2,206,411	2,214,984	2,217,628
General Service < 50 kW	726,360	716,896	709,791	704,193	699,744

UPDATED OTHER REVENUE SUMMARY

2

1

3 1. INTRODUCTION

- 4 Other Revenue, also referred to as Revenue Offsets, relates to all utility revenues other than
- 5 distribution and cost of power revenues. Hydro Ottawa has classified these into the following
- 6 categories: Specific Service Charges ("SSCs"), Late Payment Charges, Other Operating
- 7 Revenue, and Other Income and Deductions.

- Table 1 provides a summary of Other Revenue from 2016-2025, along with the associated
- 10 Uniform System of Accounts ("USofA"). Table 1 has been both revised and updated, as detailed
- 11 below. The revisions to 2016-2019 were made to remove some costs from Rate Base to
- non-distribution, resulting in an increase in Other Revenue. The revision to 2020 was made to
- 13 include the offsetting entry to the regulatory asset for the Gains and Losses on Disposal of
- 14 Fixed Assets Variance Account, as described in UPDATED Exhibit 9-1-3: Group 2 Accounts.
- 15 The update in 2020-2022 was made as a result of the updated MiGen project, as described in
- 16 the updates to section 2.3.3 of Attachment 2-4-3(E): Material Investments.

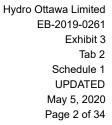

Table 1 – AS ORIGINALLY SUBMITTED – Other Revenue Summary (\$'000s)

	Hist	torical Ye	ars Bridge Years			Test Years			\$

2

- 3 A detailed breakdown of Other Operating Revenue and Other Income and Deductions is
- 4 provided in **UPDATED** Attachment 3-2-1(A): OEB Appendix 2-H Other Operating Revenue.

5

6 2. SPECIFIC SERVICE CHARGES

- 7 SSCs are applied for service requests or activities which primarily benefit or are attributed to the
- 8 customer who requests or initiates the specific service or activity. An example would be setting
- 9 up an account for a new customer. Conversely, some SSCs are applied as a result of a
- 10 customer's inaction, such as non-payment. As part of this Application, Hydro Ottawa undertook
- 11 a review of many routine service charges to ensure that the associated costs of providing such
- 12 services were appropriately recovered.

13

14 2.1. SUMMARY OF PROPOSED SSC CHANGES

- 15 Changes to Hydro Ottawa's SSCs for the 2021-2025 period are discussed in more detail below.
- 16 Additional information regarding SSCs can be found in **UPDATED** Exhibit 8-7-1: Specific
- 17 Service Charges and Attachment 8-7-1(A): Proposed and New Specific Service Charge

^{18 &}lt;sup>3</sup> Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 4 of 34

- 1 Calculations. Hydro Ottawa is proposing to apply its Custom Price Escalation Factor ("CPEF") of
- 2 2.51% to all SSCs for the years 2022-2025.4 For detail and context on Hydro Ottawa's CPEF,
- 3 refer to UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework.

4

5 2.1.1. Removal of "Account Certificate" Charge

6 The "Account Certificate" charge applies to the provision of both an Easement Certificate and an

7 Arrears Certificate. The Easement Certificate confirms if Hydro Ottawa has any associated

8 property easements, whereas the Arrears Certificate confirms if the current account has any

9 outstanding payments. While historically, these two requests were routinely received for real

0 estate transactions, over more recent years demand for the combined services has significantly

11 declined. Additionally, the costs associated with the provision of each service have become

12 distinctly different. Specifically, the Easement Certificate is now more labour intensive, relative to

13 the Arrears Certificate. A separation of these related charges is therefore required to more

14 accurately align the respective charge with associated costs.

15

16 Hydro Ottawa is requesting that the "Account Certificate" charge be eliminated and replaced

17 with an "Easement Certificate for Unregistered Easements" charge to cover the costs of

18 confirming unregistered easements and/or issuing compliance letters, per property search. The

proposed charge would be set at \$25 in 2021 and escalated by Hydro Ottawa's CPEF of 2.51%

over the course of 2022-2025.

21

2 Similarly, Hydro Ottawa requests approval for an "Arrears Certificate" charge to cover the costs

3 associated with confirming the payment status of an account, at the existing 2020 rate of \$15

24 and escalated by 2.51% over the 2022-2025 period.

_

²⁵ The only exception to this approach is with respect to Dry Core Transformer Distribution Charges, which are based

²⁶ on proposed 2021-2025 distribution rates of the >50kW commercial classes, as well as the forecasted Regulated

²⁷ Price Plan, transmission, low voltage, and regulatory rates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 5 of 34

1 2.1.2. Account Set Up/Change of Occupancy Charge

- 2 A productivity initiative to streamline the customer move process reduced certain labour costs
- 3 associated with opening and closing customer accounts. As a result, Hydro Ottawa is applying
- 4 for a new rate of \$25 in 2021, which represents a \$5 reduction from the 2020 rate of \$30. Hydro
- 5 Ottawa also proposes to apply its escalation factor of 2.51% annually between 2022 and 2025.

6

7 2.1.3. Reconnect at Meter after Regular Hours

8 During the previous rate period of 2016-2020, Hydro Ottawa phased-in remote meter

9 reconnection technology in hard-to-access locations and premises that have high

0 move-in/move-out trends. Through the use of Honeywell (formerly Elster) technology, Hydro

11 Ottawa can remotely reconnect meters through its Advanced Metering Infrastructure ("AMI")

12 equipped with the EnergyAxis Management System ("EA MS"). The operational productivity

13 and efficiencies, including the elimination of a field trip to a customer's premise to reconnect

4 electricity service, has reduced associated labour and fleet costs. Customers also benefit from

more timely service restoration. As a result, Hydro Ottawa is applying for a new rate of \$100 in

16 2021, which represents an \$85 reduction from the 2020 rate of \$185. Hydro Ottawa also

7 proposes to apply its escalation factor of 2.51% annually between 2022 and 2025.

18

19 2.1.4. Duplicate Invoices for Previous Billing

- 20 The availability of online bills, presented in bill format, has enabled Hydro Ottawa to issue
- 21 duplicate bills by email, rather than by Canada Post. This efficiency measure has resulted in
- 22 both bill printing and mailing cost savings. Hydro Ottawa is seeking approval for a rate reduction
- 23 from \$15 in 2020 to \$5 in 2021, along with its annual 2.51% escalation factor increase for the
- 24 years 2022-2025. Requests for this service are forecast to remain static.

25

26 2.1.5. Interval Meter - Field Reading

- 27 This service charge initially included the costs associated with a Hydro Ottawa representative
- 28 attending to the site of interval-metered customers to obtain a scheduled meter reading. Such

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 6 of 34

1 site visits would occur, within a reasonable timeframe, in situations in which the phone line was

2 inoperable and the customer had not taken steps to have the phone line fixed.

3

- 4 More recently, Hydro Ottawa has partnered with a cellular carrier to provide a cellular modem
- 5 that will eliminate the need for interval meter phone lines. As this initiative is being phased in,
- 6 Hydro Ottawa may nevertheless need to continue visiting some interval-metered premises to
- 7 take a meter reading, when the phone lines are inoperable. Where applicable, additional trips to
- 8 the site to obtain manual readings will continue to be recovered.

9

- 10 The revenue associated with this service is expected to decline significantly as remote cellular
- 11 communications are phased in. Hydro Ottawa is requesting approval to reduce the 2020 rate of
- 12 \$378 to \$314 in 2021. An annual escalation of 2.51% for the years 2022-2025 is also sought.

13

14 2.1.6. Unprocessed Payment Charge

- 15 This service charge recovers internal costs associated with unprocessable payments.
- 16 Historically, Hydro Ottawa has been applying the standard 2006 Electricity Distribution Rate
- 17 ("EDR") handbook rate. However, a recent internal costing review revealed there was a material
- 18 shortfall in actual cost recovery. As a result, Hydro Ottawa is seeking approval for an increase
- 19 from \$15 to \$25 in 2021. The utility is proposing to apply its escalation factor of 2.51% annually
- 20 for the years 2022-2025.

21

22 2.1.7. Reconnect at Pole - During Regular Hours

- 23 This service charge relates to service reconnections that must be conducted at the distribution
- 24 pole by qualified lines persons. Historically, Hydro Ottawa has been applying the standard 2006
- 25 EDR handbook rate. However, a recent internal costing review revealed there was a material
- 26 shortfall in actual cost recovery. As a result, Hydro Ottawa is seeking approval for an increase
- 27 from \$185 in 2020 to \$250 in 2021. The utility also proposes to apply its escalation factor
- 28 increase of 2.51% annually between 2022 and 2025.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 7 of 34

1 2.1.8. Special Billing Service

- 2 This SSC recovers the costs (primarily labour) associated with the provision of additional billing
- 3 services that require sourcing, compiling, and presenting several months or years of billing
- 4 information for customers or their agents. Hydro Ottawa is seeking approval for an increase
- 5 from \$104 in 2020 to \$122 in 2021 and its escalation factor increase of 2.51% per year
- 6 between 2022 and 2025.

7

8 2.1.9. Specific Charge to Access Power Poles - Wireline

- 9 For the 2016-2020 period, Hydro Ottawa secured approval from the OEB for a utility-specific
- 10 rate of \$53 per pole per year. For the 2021 Test Year, Hydro Ottawa intends to move to the
- 11 OEB's generic rate of \$45.39, consistent with the policy established by the OEB in 2018.⁵ The
- 12 OEB's approved 2020 inflationary factor has been used to increase the provincially approved
- 13 rate for 2021, and an escalation factor increase of 2.51% per year between 2022 and 2025.

14

15 **2.1.10. Dry Core Transformer Charge**

- 16 On an annual basis, these charges are updated to reflect the new Regulated Price Plan ("RPP")
- 17 prices, transmission rates, and Hydro Ottawa's distribution rates. Please see UPDATED Exhibit
- 18 8-7-1: Specific Service Charges and UPDATED Attachment 8-7-1(B): Dry Core Calculations for
- 19 more information. The distribution portion of the revenues for 2021-2025 are based on
- 20 estimated bill impacts of the commercial customers that are charged for dry core transformers.

21

22 2.2. HIGH LEVEL SSC VARIANCE ANALYSIS

23 **2.2.1. 2016** Actual to 2017 Actual

- 24 SSC revenues for 2017 were \$700K (11%) below 2016 actuals. The main driver was a one-time
- 25 \$549K recognition of miscellaneous revenue in 2016. A contingent liability was booked in
- 26 relation to a customer payment received prior to a bankruptcy proceeding. This liability was
- 27 reversed once the provision recognition criteria no longer applied. Further, the introduction of

²⁸ Ontario Energy Board, *Report of the Ontario Energy Board - Wireline Pole Attachment Charge*, EB-2015-0304 (March 22, 2018).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 8 of 34

- 1 the Disconnection Moratorium for residential customers in 2017 reduced the overall volume of
- 2 reconnection activity and by extension, revenues in 2017 by approximately \$130K.

3

- 4 2.2.2. 2017 Actual to 2018 Actual
- 5 SSC revenues in 2018 were \$221K (4%) above 2017 actuals. This increase was primarily due
- 6 to an increase in Collection of Account revenue of \$134K (27.8%) and Pole Attachment revenue
- 7 of \$121K (3.6%), due to higher than historical field collection activity and a higher than
- 8 forecasted increase in actual pole attachments.

9

- 10 2.2.3. 2018 Actual to 2019 Bridge Year
- 11 SSC revenues for 2019 are forecasted to be \$157K (3%) below 2018 actuals. The main driver is
- 12 the removal of the Collection of Account Charge for residential customers, effective July 1,
- 13 2019, in compliance with the Phase 1 amendments to the OEB's Customer Service Rules.⁶

14

- 15 **2018 Actual to 2019 Actual**
- 16 SSC revenues in 2019 were \$170K (3%) below 2018 actuals. The main driver is the removal of
- 17 the Collection of Account Charge for residential customers, effective July 1, 2019, in compliance
- with the Phase 1 amendments to the OEB's Customer Service Rules.

19

- 20 **2.2.4. 2019** Bridge Year to 2020 Bridge Year
- 21 SSC revenues for 2020 are forecasted to be \$21K (0.3%) above the 2019 forecast. There are
- 22 no variances of material value to note. Modest revenues from wireless pole attachments are
- 23 forecasted in 2020.

- 25 2019 Actual to 2020 Bridge Year
- 26 SSC revenues for 2020 are forecasted to be \$34K (0.6%) above the 2019 actuals.

²⁷ Ontario Energy Board, *Notice of Amendments to Codes and a Rule: Amendments to the Distribution System Code*,

²⁸ Standard Supply Service Code, Unit Sub-metering Code, and Gas Distribution Access Rule (and Associated Rate

²⁹ Order), EB-2017-0183 (March 14, 2019).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 9 of 34

1 2.2.5. 2020 Bridge Year to 2021 Test Year

- 2 SSC revenues in 2021 are forecasted to be \$0.5M (8%) below the 2020 forecast. The reasons
- 3 for this reduction are noted in section 2.1 above. The annual increase from 2021-2025 is
- 4 primarily due to the escalation factor applied to the rates each year. One exception is wireless
- 5 pole attachments, where volumes are expected to increase by 200 units on an annual basis out
- 6 to 2025.

7

8 2.3. SSC FORECAST AND VARIANCE ANALYSIS

- 9 Each SCC is forecasted based on the rate factored by the estimated volume. Tables 2 and 3
- 10 below provide the revenue actuals and forecast for each SSC. Table 2 has been updated to
- 11 account for 2019 actuals.

- 13 Thereafter, Hydro Ottawa provides an analysis for each SCC of the difference in revenues that
- 14 are expected between the 2016-2020 and 2021-2025 rate periods.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 13 of 34

1 2.3.1. Arrears Certificate

- 2 For the Arrears Certificate (formerly Account Certificate), Hydro Ottawa will continue to use the
- 3 standard provincial rate for 2020 and increase by its escalation factor of 2.51% per year starting
- 4 in 2021 through 2025.

5

6 Variance analysis:

- 7 Future demand for this service is expected to be lower than Historical Years, partially due to the
- 8 separation of the Easement Certificate for Unregistered Easements charge, as noted in 2.3.2
- 9 below. Therefore, the volume and estimated revenue is set at zero. Hydro Ottawa wishes to
- 10 maintain this charge in the event that customers should require this service.

11

12 2.3.2. Easement Certificate for Unregistered Easements

- 13 Hydro Ottawa is proposing to introduce a new charge for Easement Certificate for Unregistered
- 14 Easements, which was previously embedded in the Account Certificate Charge.

15

16 Variance analysis:

- 17 Most historical revenues were associated with this service. A new rate of \$25 is proposed for
- 18 2021 and will be increased annually by 2.51% per year through to 2025. This rate is reflective of
- 19 the cost to offer this service. The estimated revenue is based upon a volume of 320 requests
- 20 per year.

21

22 2.3.3. Duplicate Invoices for Previous Billing

- 23 Hydro Ottawa is proposing to reduce the current 2020 rate of \$15 to \$5 in 2021 and adjust the
- 24 rate annually by 2.51% through to 2025. Further automation of this service provision has
- 25 reduced costs and, hence, the rate. The forecasted volume is based upon historical trends,
- 26 which are modest at 170 requests per year.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 14 of 34

1 Variance analysis:

- 2 There are no material differences in actual versus budgeted revenues for the 2016-2018 period
- 3 or in the year-over-year revenue forecast from 2016-2025. The lower revenue forecast, as of
- 4 2021, reflects the proposed reduced rate.

5

6 2.3.4. Special Billing Service

- 7 The Special Billing Service charge (formerly Request for other Billing Information) was
- 8 introduced as part of Hydro Ottawa's 2016-2020 rate application. 10 It was applied to all requests
- 9 for customized billing information that involves sourcing, compiling, and presenting several
- 10 months or years of billing information for customers or their agents. Hydro Ottawa is proposing a
- 11 rate of \$122 in 2021 and making an annual adjustment of 2.51% through to 2025. This rate
- 12 reflects the Hydro Ottawa labour rate for this labour-intensive service. The volume estimated is
- 13 expected to remain similar to the 2016-2020 period.

14

15 Variance analysis:

- 16 There are no material revenue differences in actual versus budgeted revenues during the
- 17 2016-2018 period or year-over-year during the 2016-2025 period.

18

19 2.3.5. Credit Reference/Credit Check

- 20 Hydro Ottawa will continue to apply the standard provincial rate of \$15 for 2020 and adjust
- 21 annually in accordance with its escalation factor, beginning in 2021 through 2025. The volume
- 22 estimate will continue to be based on historical trends with a forecast of 66 per year. This is in
- 23 line with the 2016-2018 actual volumes.

24

25 Variance analysis:

- 26 There are no material differences in actual versus budgeted revenues for the 2016-2018 period,
- 27 or in the year-over-year revenue forecast over the 2016-2025 period.

. .

²⁸ ¹⁰ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-setting Distribution Rate Application*, EB-2015-0004 (April 29, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 15 of 34

1 2.3.6. Unprocessed Payment Charge

2 Hydro Ottawa is proposing to increase the current 2020 rate of \$15 to \$25 in 2021 and apply its escalation factor of 2.51% annually through to 2025. The proposed rate increase is based upon internal costing analysis which determined insufficient cost recovery for this service. Costs associated with this service include internal costs for administering an unprocessable payment (i.e. non-sufficient funds or "NSF"), labour, and bank fees. Annual volume estimates for the 2021-2025 rate period are estimated to be 2,000. The increase in revenue between 2021 and 2025 reflects the proposed, revised service charge.

9

10 Variance analysis:

There were no material differences in actual versus budgeted revenue for the 2016-2018 period or in year-over-year for the 2016-2025 period. The increase in revenue forecast, as of 2021, is a reflection of the new proposed rate.

14

15 2.3.7. Account Set Up Charge/Change of Occupancy Charge

Hydro Ottawa is proposing to reduce the current 2020 rate of \$30 to \$25 in 2021 and increase by 2.51% annually through to 2025. The proposed new rate reflects labour savings due to a streamlined customer Move-In/Move-Out process, which enables the Contact Centre to complete 50% of customer moves. The volume estimate for the last rate application estimated 1% growth per year. Actual volumes from 2016-2020 have averaged 56,500 moves on an annual basis. Therefore, the 2018 actual volume has been applied from 2021-2025.

22

Variance analysis:

Hydro Ottawa is trending below budget from 2016-2018 by \$122K, \$237K, and \$336K, respectively. While the budget assumed 1% growth in account setup revenue year-over-year, actuals are showing a decline of about 5% from 2016 to 2017 and 4% from 2017 to 2018. The associated reduction in forecasted revenue through 2025, as of 2021, reflects the reduced service charge rate.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 16 of 34

1 2.3.8. Interval Meter - Field Reading

- 2 Hydro Ottawa is proposing to reduce the current 2020 rate of \$378 to \$314 in 2021 and apply its
- 3 annual escalation factor of 2.51% through to 2025. The main driver of the reduced rate is to
- 4 align this business practice with other field practices, which provides a Hydro Ottawa
- 5 representative field visit once without charge. As such, Hydro Ottawa is no longer proposing to
- 6 include the cost of an initial visit to obtain an interval meter field reading. The volume estimate is
- 7 based on recent annual trends.

8

Variance analysis:

10 There are no material revenue differences year-over-year for the 2016-2025 period.

11

12 2.3.9. High Bill Investigation - If Billing is Correct

- 13 Hydro Ottawa proposes to continue with the 2020 utility-specific rate and adjust by its annual
- 14 escalation factor of 2.51% between 2021 to 2025. The forecasted volume has been reduced to
- 15 align with recent trending.

16

17 Variance analysis:

18 There are no material revenue differences year-over-year for the 2016-2025 period.

19

20 2.3.10. Collection of Account Charge

- 21 This charge was removed, effective July 1, 2019, in accordance with the implementation of
- 22 Phase 1 of the OEB's Customer Service Rules.

23

4 Variance analysis:

- 25 Actual revenues exceeded budget in 2018 due to increased use of this charge to offset some of
- 26 the costs associated with rolling a truck to hand deliver a 48-hour warning notice, in advance of
- 27 disconnection action. In 2019, Hydro Ottawa implemented an automated notification solution as
- 28 the primary option for communication of the 48-hour disconnection notice. As a result, the
- 29 revenue forecast for 2019 and 2020 has been reduced to reflect the lower than historical

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 17 of 34

1 premise visits associated with providing a 48-hour warning notice to customers scheduled to be

2 disconnected for non-payment.

3

4 2.3.11. Reconnect at Meter during Regular Hours

- 5 Hydro Ottawa shall continue to apply the standard provincial rate for 2020 and apply its annual
- 6 escalation factor of 2.51% for the 2021-2025 period. The increasing availability of automated
- 7 meter reconnections has reduced internal costs and has therefore allowed full cost recovery
- 8 within the current rate. The estimated volumes for 2021-2025 are based upon 2018 actuals.

9

10 Variance analysis:

- 11 Hydro Ottawa trended below budget in 2017 and 2018. This is primarily due to the
- 12 Disconnection Moratorium, which is effective annually from November 15th to April 30th.

13

14 2.3.12. Reconnect at Meter after Regular Hours

- 15 Hydro Ottawa is proposing to reduce the current 2020 rate of \$185 to \$100 in 2021 and apply its
- annual escalation factor of 2.51% through to 2025. Based upon 2017 and 2018 actual volumes,
- 17 the volume estimates for 2021-2025 are slightly lower than the historical forecast.

18

19 Variance analysis:

- 20 There are no material differences in actual versus budgeted revenues for the 2016-2018 period
- 21 or in year-over-year for the 2016-2025 period. The reduced revenue forecast as of 2021 reflects
- 22 the reduced charge.

23

4 2.3.13. Reconnect at Pole during Regular Hours

- 25 Hydro Ottawa is proposing to increase the current 2020 rate of \$185 to \$250 in 2021 and apply
- 26 its 2.51% escalation factor each year for the 2022-2025 period. An increase in this charge is
- 27 sought to recover associated labour and fleet costs. Reconnection at the pole is more costly,
- 28 because two specially-qualified employees are required due to the increased safety
- 29 requirements of pole work. While the volume was estimated at zero for the previous rate

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 18 of 34

- 1 application, based upon more recent trending a volume of 17 per year is estimated for the
- 2 2021-2025 rate term.

3

4 Variance analysis:

- 5 Actual volume exceeded the zero forecast. There are no material differences in actual versus
- 6 budgeted revenues for the 2016-2018 period or in year-over-year for the 2016-2025 period.

7

8 2.3.14. Reconnect at Pole after Regular Hours

- 9 Hydro Ottawa will continue to adopt the standard provincial rate for 2020 and increase by the
- 10 annual escalation factor between 2021 and 2025. The volume estimate has been increased to
- 11 two per year for the 2021-2025 period, based upon recent trending.

12

3 Variance analysis:

- 14 Actuals were greater than forecast as these types of reconnections are relatively infrequent. As
- 15 such, a volume of zero was estimated for the period 2016-2020. The small volume reflects
- 16 actual revenue. There are no material revenue differences in actual versus budgeted for the
- 17 2016-2018 period or in year-over-year for the 2016-2025 period.

18

19 2.3.15. Temporary Service - Install & Remove

- 20 Temporary services cover the connection, metering, installation, and removal of required assets
- 21 to supply electrical energy on a planned temporary basis, as per Hydro Ottawa's Conditions of
- 22 Service. Transformer rental costs are included in the Temporary Service Install & Remove -
- 23 Overhead with transformer charge. Any additional material costs beyond the standard service,
- 24 such as the installation of a pole, the upgrade of a secondary buss, or new underground
- 25 transformer requirements will be charged in addition to this SSC and will be recorded as Other
- 26 Income and Deductions.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 19 of 34

- 1 Hydro Ottawa plans to continue with the 2020 utility-specific rates and increase them by its
- 2 annual escalation factor of 2.51% starting in 2021 through 2025. The volume estimate has been
- 3 based on the actual 2016-2018 values.

4

5 Variance analysis:

6 There are no material year-over-year revenue variances for the 2016-2025 period.

7

8 2.3.16. Specific Access to Power Poles - Wireline Attachments

- 9 Hydro Ottawa generates joint use revenue from third parties who place attachments on the
- 10 utility's poles. There are currently pole attachment agreements with 11 telecommunication
- 11 companies, and agreements with the City of Ottawa and Village of Casselman for streetlight
- 12 attachments. Hydro Ottawa has seen modest increases in the number of pole attachments from
- 13 2016-2020. This historical trend is the basis for the 2021-2025 forecasted volume. As of 2021,
- 14 Hydro Ottawa will be moving from the utility-specific wireline pole attachment rate of \$53.00 per
- 15 pole per year to the provincially approved rate of \$43.63. The generic provincial rate is adjusted
- 16 on January 1st each year, based upon the OEB-approved inflation factor. Please refer to Exhibit
- 17 8-7-1: Specific Service Charges for complete details on the updated rate.

18

9 Variance analysis:

- 20 Revenues in 2021 are forecasted to drop approximately \$175K over the 2020 forecast.
- 21 Between 2022 and 2025, revenues are expected to increase modestly.

22

23 2.3.17. Specific Access to Power Poles - Wireless Attachments

- 24 Hydro Ottawa currently has very few wireless pole attachment agreements. Revenues are only
- 25 expected to commence in 2020. In 2021, Hydro Ottawa intends to close the Deferral and
- 26 Variance Account established as part of the 2016-2020 rate application to record wireless pole
- 27 attachment revenue, as it is anticipated that revenue from this source can reasonably be
- 28 forecasted in the future. Please see Exhibit 9-1-3: Group 2 Accounts for further information.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 20 of 34

- 1 Future volume and revenues for wireless attachments have been based on estimates. Please
- 2 refer to Exhibit 8-7-1: Specific Service Charges for complete details on the wireless pole
- 3 attachment rate.

4

5 Variance analysis:

6 Revenues between 2020 and 2025 are expected to increase modestly.

7

8 2.3.18. Dry Core Transformer Charges

- 9 Dry Core transformer charges are applied to recover energy lost in the operation of dry core
- 10 transformers. A specific charge is calculated for each transformer size.

11

- 12 Hydro Ottawa is proposing to include rates for new sizes of transformers that are currently in the
- 13 utility's service area, as well as sizes in CSA-C802-94 that were not previously included in the
- 14 Schedule of Rates and Tariffs. In addition, Hydro Ottawa is proposing to calculate the dry core
- 15 transformer loss charge for any new size of transformer upon connection, based on the
- 16 approved dry core rate design. Hydro Ottawa proposes to add new dry core transformers to the
- 17 Schedule of Rates and Tariffs on an annual basis as part of the utility's annual rate adjustment
- 18 applications during the 2021-2025 period. Please see **UPDATED** Exhibit 8-7-1: Specific Service
- 19 Charges for further details on the Dry Core transformer charges.

20

21 Variance analysis:

- 22 There are no material year-over-year revenue variances for the 2016-2025 period. Hydro
- 23 Ottawa has used historical trending to estimate the revenue for 2021-2025.

24

25 **2.3.19. Miscellaneous Revenue**

- 26 There was a one-time \$549K recognition of miscellaneous revenue in 2016. This contingent
- 27 liability was reversed as the provision recognition criteria were no longer applicable.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 21 of 34

1 3. LATE PAYMENT CHARGES

2 An OEB-approved monthly interest rate of 1.5% (effective annual rate of 19.56% per annum or

- 3 0.04896% compounded daily rate) is applied to outstanding account balances that exceed 16
- 4 calendar days from the date on which the bill was issued to the customer. Effective March 1,
- 5 2020, the minimum payment period will be extended to 20 calendar days, in accordance with
- 6 Phase 1 of the OEB's Review of Customer Service Rules.

7

- 8 A decline in Late Payment Charge revenue is forecasted, taking into account the continued
- 9 promotion of automated payment withdrawal services, effective use of the Auto Dialer tool
- 10 during the Disconnection Moratorium timeframe, and additional proposed OEB Customer
- 11 Service Rule changes. 11 As originally submitted, Late Payment Charge revenue is expected to
- 12 decline to \$1.0M for the years 2020-2025. After accounting for 2019 actuals, Late Payment
- 13 Charge revenue is expected to remain flat at \$1.0M for the years 2020-2025.

14

15 4. OTHER OPERATING REVENUES

- 16 Other Operating Revenues include revenue associated from the provision of Standard Supply,
- 17 Retailer, and Generator services. Tables 4 and 5 show Historical Year (2016-2018), Bridge Year
- 18 (2019-2020), and Test Year (2021-2025) revenue for Other Operating Revenues. Table 4 has
- 19 been updated to account for 2019 actuals, and shows Historical Years (2016-2019) and Bridge
- 20 Year (2020) revenue for Other Operating Revenues. Table 5 remains unchanged and displays
- 21 revenue for Other Operating Revenues for the 2021-2025 Test Years.

4.1. STANDARD SUPPLY SERVICE ADMINISTRATION CHARGE

- 8 The Standard Supply Service Administration Charge ("SSS Charge") is an administrative charge
- 9 that allows Hydro Ottawa to recover its costs of providing standard supply service to all

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

7

2

4

^{10 12} Totals may not sum due to rounding.

¹¹ Totals may not sum due to rounding.

^{12 &}lt;sup>14</sup> Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 23 of 34

1 customers who are not enrolled with a Retailer. The SSS Charge was introduced on May 11,

2 2005 as part of the 2006 EDR. 15

3

The monthly SSS Charge of \$0.25 per customer per month has not been adjusted to reflect actual costs or inflation since implementation. In light of the OEB's review of miscellaneous service charges, as announced on November 5, 2015, it is anticipated that this rate will be updated. Until such time, Hydro Ottawa is proposing to increase the SSS Charge to align with the 2021-2025 Retailer Services, Distributor-Consolidated Billing monthly charge. The corresponding increase will result in customers paying an equal service charge regardless of electricity service provider, and the pricing between Hydro Ottawa and the Retailer will be relatively maintained.

12

This approach will also ensure that Hydro Ottawa will not lose revenue regardless of what supply choice the customer makes. Please refer to UPDATED Exhibit 8-7-1: Specific Service Charges for further details on the SSS Charge rate design.

16

17 Variance analysis:

- 18 Overall net customer growth has resulted in slightly higher revenue than forecasted. In addition,
- 19 a lower number of retail customers than anticipated has increased the number of customers
- 20 being charged the SSS Charge, as opposed to Hydro Ottawa collecting customer-related
- 21 charges from Retailers. As a result, a similar decrease in revenue has occurred related to
- 22 Retailer Service Charges. The net impact of these two variances has resulted in an average of
- 23 \$44.2K higher revenues related to the SSS Charge on a yearly basis during the 2016-2018
- 24 period. This trend continued in 2019.

25

26 4.2. RETAILER SERVICES

- 27 Retailer Service Charges ("RSCs") recover the costs of services that Hydro Ottawa provides to 28 electricity retailers, or their customers, in relation to the competitive supply of energy. The
- ²⁹ ¹⁵ Ontario Energy Board, *2006 Electricity Distribution Rate Handbook* (May 11, 2005), page 126.
- ³⁰ Ontario Energy Board, Letter re: *Review of Miscellaneous Rates and Charges*, EB-2015-0304 (November 5, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 24 of 34

- 1 revenue generated from the RSCs have declined annually due to a reduction in the number of
- 2 customers enrolled with a Retailer. Notwithstanding the decrease in retailer-enrolled customers,
- 3 Hydro Ottawa's expenses related to these services have remained constant.

4

- 5 Hydro Ottawa intends to apply the OEB generic rates for RSCs. Please see Exhibit 8-4-1: Retail
- 6 Service Charges for more information on the 2021-2025 RSCs.

7

8 Variance analysis:

- 9 RSCs are mainly driven by the number of customers who are enrolled with a retailer. As the
- 10 number of retail customers has been lower than that which was estimated in the utility's
- 11 2016-2020 rate application, less revenue has been collected. On average, \$40.2K less revenue
- 12 has been collected per year over the 2016-2018 period.

13

14 4.3. GENERATOR SERVICES

- 15 Monthly fixed charges for generation customers, other than the microFIT charge, were
- 16 introduced in Hydro Ottawa's 2016-2021 rate application to reflect the cost of managing these
- 17 accounts. The microFIT charge was requested to be a utility-specific charge in order to reflect
- 18 the cost of managing related accounts. Hydro Ottawa has reviewed these charges and is
- 19 proposing to update and continue using them for the 2021-2025 period.

20

- 21 As a result of greater efficiencies in managing an increasing number of generators, Hydro
- 22 Ottawa is proposing to reduce the current 2020 monthly rate of \$19 for microFit and Net
- 23 Metering customers to \$14 in 2021, and the current 2020 monthly rate of \$129 for FIT
- 24 customers to \$76 in 2021.

- 26 Hydro Ottawa proposes an increase to the rate for managing a small number of larger
- 27 generators from the 2020 rate of \$281 to \$314 in 2021.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 25 of 34

- 1 Hydro Ottawa proposes to increase the generation charges annually by 2.51% for 2022-2025.
- 2 This rate is consistent with the escalation rate applied to Hydro Ottawa's 2022-2025 operations,
- 3 maintenance and administration ("OM&A") expenses and the majority of other revenue rates as
- 4 part of this Application. For more details regarding the utility's proposed custom escalation rate
- 5 for its 2021-2025 rate term, please see **UPDATED** Exhibit 1-1-10: Alignment with the Renewed
- 6 Regulatory Framework.

7

- 8 For complete details on the design of generation charges, please refer to **UPDATED** Exhibit
- 9 8-7-1: Specific Service Charges.

10

11 Variance Analysis:

- 12 Fewer than expected generator contracts within Hydro Ottawa's service territory have come to
- 13 fruition. By extension, the number of generator connections has been lower than anticipated.
- 14 However, over the three-year period from 2016-2018 there is no material variance in revenue
- 15 from generation charges.

16

17 5. OTHER INCOME AND DEDUCTIONS

- 18 A fourth and final way in which Hydro Ottawa earns revenue is through the provision of services
- 19 to customers and third parties, property rental income from leased plant, gains (or losses) on
- 20 the disposal or retirement of utility property, the provision of services to Hydro Ottawa's affiliates,
- 21 and earning interest income on short-term investments.

22

These activities are classified under the Other Income and Deductions category as follows:

24

- Services to Third Parties, net of costs
- Property Rental Income
- Gains and Losses on Disposal of Utility Property
- SLA Services to Hydro Ottawa Affiliates, net of costs
- Interest and Dividend Income

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 26 of 34

1 Tables 6 and 7 summarize Other Income and Deductions for the 2016-2025 period. The

2 revisions to 2016-2019 were made to remove some costs from rate base to non-distribution,

3 resulting in an increase in Other Revenue. The revision to 2020 was made to include the

4 offsetting entry to the regulatory asset for the Gains and Losses on Disposal of Fixed Assets

5 Variance Account, as described in UPDATED Exhibit 9-1-3: Group 2 Accounts. The update in

6 2020-2022 was made as a result of the updated MiGen project, as described in the updates to

7 section 2.3.3 in Attachment 2-4-3(E): Material Investments.

8 5.1. SERVICES TO THIRD PARTIES

HydroOttawa

1

3

5

6

9 These revenues, net of expenses, relate to services provided to customers or third parties 10 beyond the standard temporary services included in Specific Service Charges (as itemized in 11 Tables 2 and 3 above). These additional services may include isolating and re-energizing 12 services, mutual aid services, transformer vault shutdown escort services, inspection services, 13 generator services, and a recently introduced bill reporting service. A small amount of revenue

^{14 20} Totals may not sum due to rounding.

^{15 &}lt;sup>21</sup> Totals may not sum due to rounding.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 3
Tab 2
Schedule 1
UPDATED
May 5, 2020
Page 29 of 34

1 is also forecasted for providing ad hoc web portal services for viewing interval meter data in a

2 web-based format. Services to the City of Ottawa and to affiliates for the aforementioned

3 services are included in USofA 4325 Revenues from Merchandise and 4330 Costs and

4 Expenses of Merchandising.

5

6 Hydro Ottawa rents out its underground civil capacity to third parties, on a temporary basis,

7 through a five-year Access Agreement. These duct rental agreements exist with the City of

8 Ottawa and a major telecommunications provider. Hydro Ottawa has several third parties which

9 pay the applicable Specific Service Charge for wireline pole attachments. These third parties

10 include street light owners, telecommunications providers, and Hydro One Networks Inc.

11 ("HONI").

12

13 5.2. PROPERTY RENTAL INCOME

14 Property rental relates to fees paid by HONI for land owned by Hydro Ottawa. In many locations

15 in the City of Ottawa, Hydro Ottawa and HONI have joint facilities for transformer stations. For

6 locations in which Hydro Ottawa owns the land on which HONI has facilities, a rental fee is paid.

17

18 An additional source of income is from rent paid by the tenants of a small number of houses that

19 were previously purchased by Hydro Ottawa and that are located adjacent to certain distribution

stations. These houses were purchased to facilitate future station expansion.

21

22 5.3. GAINS AND LOSSES ON DISPOSAL OF UTILITY PROPERTY

3 Hydro Ottawa periodically disposes of assets that are no longer necessary or re-usable in

serving the public (e.g. end-of-life assets, asset failure, damaged beyond repair, relocation

25 requests from third parties, surplus inventory, obsolescence, etc.). Where the proceeds vary

26 from the net book value of an asset, Hydro Ottawa treats the variances as a debit or credit to

27 income.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 30 of 34

1 Hydro Ottawa applies the associated gains and losses to USofA 1508 Other Regulatory Assets

2 - Sub-Account - Gains and Loss on Disposal of Fixed Assets Variance Account. Please refer to

3 UPDATED Exhibit 9-1-3: Group 2 Accounts for further details on Account 1508.

4

5 As per the Approved Settlement Agreement governing Hydro Ottawa's 2016-2020 rate term, the

6 utility is recording the net gain on the sale of the Albion land and building, as well as the

7 Merivale land and building, in a separate regulatory account (Gains/Losses from Sale of

8 Existing Facilities Deferral account). This account captures 100% of the after tax net gain/loss

9 on the sale of these facilities. Please see **UPDATED** Exhibit 9-3-1: Group 2 Accounts for more

10 information on this Regulatory Account.

11

12 5.4. SERVICES TO HYDRO OTTAWA AFFILIATES

13 Hydro Ottawa provides services to its affiliates under the terms of Service Level Agreements

14 ("SLAs"), which are updated annually. These affiliates are Hydro Ottawa Holding Inc. (the

15 utility's parent company), as well as Energy Ottawa Inc. and Envari Holding Inc.

16

17 Hydro Ottawa provides Human Resources, Safety, Environment, Business Continuity, Facilities,

18 Information Technology and Management, Finance, Regulatory, Legal, Communications, Key

19 Account Support, Electricity Distribution Management, Meter Data, Fleet, and Mechanic

20 Services to its affiliates. As described in section 5.1 above, in addition to shared corporate

21 services Hydro Ottawa provides distribution design, flood restoration work, streetlight

22 conversion, and emergency response to Energy Ottawa. Table 8 below provides a summary of

3 all revenues earned from services provided to affiliates, whether through SLAs or other

24 contractual arrangements.

25

26 Additional detail on the services Hydro Ottawa provides to and receives from affiliates is

27 available in Exhibit 4-2-1: Shared Services and Corporate Cost Allocation.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 31 of 34

1 Consistent with section 2.4.3.2 of the Chapter 2 Filing Requirements for Electricity Distribution

2 Rate Applications, as updated on July 12, 2018 and addended on July 15, 2019, as well as with

3 OEB guidance issued in 2018, SLA costs are no longer included in OM&A.22 For additional

4 details, please see Exhibit 4-2-1: Shared Services and Corporate Cost Allocation and

5 UPDATED Exhibit 4-1-4: Operations, Maintenance and Administration Cost Drivers and

6 Program Variance Analysis for additional details.

7

Prior to 2019, Hydro Ottawa recorded the SLA revenue in USofA 4325 as Revenues from

Merchandising and Jobbing, and applied the associated costs to OM&A. With the growth of

10 Hydro Ottawa's affiliates, the amounts charged to these affiliates and the associated costs

11 through SLAs have increased significantly, as outlined in UPDATED Attachment 3-2-1(B): OEB

12 Appendix 2-N - Shared Services and Corporate Cost Allocation. The costs, along with the

13 associated SLA revenue, are now reported in USofA 4330 Costs from Merchandising and

14 Jobbing and are therefore not included in OM&A as of 2019.

7 5.5. INTEREST AND DIVIDEND INCOME

8 Interest income refers to interest earned on cash balances within the year.

- 10 In the years 2016-2018, a modest amount of interest was recorded under USofA Account 4405.
- 11 Material cash balances are not anticipated between 2019 and 2025.

1 5.6. VARIANCE ANALYSIS

2 5.6.1. 2016 Actual to 2017 Actual

- 3 Other Income and Deductions in 2017 increased by \$1.4M, primarily due to the \$1.2M increase
- 4 in SLA services to affiliates. Details are provided in Exhibit 4-2-1: Shared Services and
- 5 Corporate Cost Allocation.

6

7 **5.6.2. 2017** Actual to 2018 Actual

- 8 Other Income and Deductions in 2018 decreased by \$0.3M, due to a decrease in services
- 9 provided to third parties, net of costs.

10

11 **5.6.3. 2018 Actual to 2019 Bridge Year**

- 12 Other Income and Deductions are projected to decrease by \$3.7M in 2019 due to a \$3.7M SLA
- 13 cost allocation to USofA 4330 Costs from Merchandising and Jobbing. Additional information is
- 14 provided in section 5.4 above. Increased interest income is offset by losses on disposal of utility
- 15 property.

16

17 **2018 Actual to 2019 Actual**

- 18 Other Income and Deductions decreased by \$3.3M in 2019, due to a \$3.2M SLA cost allocation
- 19 to USofA 4330 Costs from Merchandising and Jobbing. Additional information is provided in
- 20 section 5.4 above.

21

22 **5.6.4. 2019** Bridge Year to 2020 Bridge Year

- 23 Other Income and Deductions in 2020 are projected to increase by \$0.9M. Services to third
- 24 parties are anticipated to increase.

25

26 2019 Actual to 2020 Bridge Year

- 27 Other Income and Deductions in 2020 are projected to increase by \$0.9M. Services to third
- 28 parties are anticipated to increase.

Hydro Ottawa Limited EB-2019-0261 Exhibit 3 Tab 2 Schedule 1 UPDATED May 5, 2020 Page 34 of 34

1 5.6.5. 2020 Bridge Year to 2021 Test Year

- 2 Other Income and Deductions for the 2021-2025 Test Years are generally in line with 2020. A
- 3 slight increase is forecast in 2022 for loss on disposal of utility property due to a one-time
- 4 disposal of meters, as a result of an initiative focused on AMI analytics and integration.
- 5 Additional information on this project is available in Exhibit 2-4-3: Distribution System Plan and
- 6 Attachment 2-4-3(E): Material Investments. The changes in 2021 and 2022 are the result of the
- 7 updated MiGen project, as described in the updates to section 2.3.3 in Attachment 2-4-3(E):
- 8 Material Investments.

Notes:

- List and specify any other interest revenue.
- In the transition year to IFRS, the applicant is to present information in both MIFRS and CGAAP. In column N, present CGAAP transition year information. For the typical applicant that adopted IFRS on January 1, 2015, 2014 must be presented in both a CGAAP and MIFRS basis. 2

Enter the number of "Other Operating Revenue" and "Other Income or Deductions" Accounts that require a detailed breakdown of the account components.

Please refer to Exhibit 3-2-1: Other Revenue, Tables 4 and 5 for a breakdown of "Other Operating Revenue" and Tables 6 and 7 for "Other Income and Deductions".

UPDATED OPERATIONS, MAINTENANCE AND ADMINISTRATION SUMMARY

2

1

3 1. INTRODUCTION

- 4 This Schedule provides an overview of Hydro Ottawa's total operating expenses, in the contexts 5 of both the 2016-2020 and 2021-2025 rate periods. These expenses include Operations,
- $_{\rm 6}$ Maintenance and Administration ("OM&A") expenditures, Property Taxes, Depreciation and
- 7 Amortization expenses, and Payments in Lieu of Taxes ("PILS"). Detailed information with
- 8 respect to each of these operating expenses is available in **UPDATED** Exhibit 4-1-3:
- 9 Operations, Maintenance and Administration Program Costs, UPDATED Exhibit 4-1-4:
- 10 Operations, Maintenance and Administration Cost Drivers and Program Variance Analysis,
- 11 UPDATED Exhibit 4-3-1: Depreciation, Amortization Disposal, and UPDATED Exhibit: 4-4-1:
- 12 Payments in Lieu of Taxes.

13

- 14 Please note that throughout this evidence, unless it is explicitly stated otherwise, OM&A is
- 15 **inclusive** of property taxes.

16

17 Table 1 summarizes Hydro Ottawa's total operating expenses for the 2021-2025 period.

8 2.1 **OVERVIEW**

9 Hydro Ottawa's forecasted OM&A expenses include costs that are incurred to continue

10 providing a safe and reliable electricity distribution system, meeting legislative and regulatory

11 compliance requirements, and satisfying other operational and maintenance needs.

13 During the 2016-2020 period, Hydro Ottawa completed key OM&A-related projects and

14 programs, such as operating and maintaining overhead and underground distribution lines,

15 feeders, transformers, and distribution stations. The utility also incurred operations and

¹⁶ Totals may not sum due to rounding.

¹⁷ Totals may not sum due to rounding.

- 1 maintenance costs for programs designed to invest in proactive measures to avoid long-term
- 2 OM&A and capital costs. Examples of such programs include vegetation management and
- 3 asset maintenance.

4

- 5 Key projects and programs in the 2021-2025 period include distribution maintenance and
- 6 operations programs, such as vegetation management, underground locates, information
- 7 technology ("IT") maintenance, contact centre and billing activities, stations maintenance, and
- 8 meter operations and testing activities.

- 10 Figure 1 below summarizes Hydro Ottawa's OM&A expenses over both rate periods (2016-2020
- 11 is displayed in blue; 2021-2025, in orange).

Page 5 of 7

1 2.2 OM&A COST DRIVERS

2 Key cost drivers for OM&A are as follows:

3

4 Proactive and Reactive Distribution System Maintenance

- 5 This includes power outage restoration work due to storms, vegetation management (e.g. tree
- 6 trimming for purposes of storm hardening), underground cable locates, distribution system
- 7 inspections, and clean-up of sites contaminated by leaks/spills.

8

Employees, Equipment, and Facilities

- 10 Hydro Ottawa relies upon a skilled and experienced workforce that is equipped with the tools
- 11 necessary to perform its work safely and efficiently. Ongoing employee training is required as
- 12 the workforce is renewed due to retirements. This ensures that employees continue to work
- 13 safely and keep pace with the new skill sets associated with a more sophisticated distribution
- 14 system and evolving business landscape.

15

16 IT & Operational Technology Systems and Communications

- 17 Many of the utility's IT and operational technology systems require ongoing support,
- 18 maintenance, and protection, including for purposes of cyber security. Examples of such
- 19 systems include the Supervisory Control and Data Acquisition System, Geographic Information
- 20 System, Customer Care and Billing System, Outage Management System, Enterprise Resource
- 21 Planning ("ERP") system, and Human Capital Management ("HCM") system. The needs and
- 22 costs associated with software licensing are also increasing.

23

- 24 For additional details on OM&A cost drivers, please see **UPDATED** Exhibit 4-1-4: Operations,
- 25 Maintenance and Administration Cost Drivers and Program Variance Analysis.

26

27 2.3 PRODUCTIVITY INITIATIVES & SAVINGS

- 28 Some of the key productivity improvements undertaken by Hydro Ottawa during its 2016-2020
- 29 rate term include the launch of an upgraded ERP system and new HCM system, migration to a

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 1 **UPDATED** May 5, 2020 Page 6 of 7

1 new customer contact centre service provider, and implementation of a Mobile Workforce

2 Management tool. Further details on these and other such initiatives are provided in Exhibit

3 1-1-13: Productivity and Continuous Improvement Initiatives.

4

5 With respect to Hydro Ottawa staffing levels (as submitted in the utility's original Application),

6 these are set to decrease in 2021 from 2019 levels (see Attachment 4-1-5(C): OEB Appendix

7 2-K - Employee Costs). After accounting for 2019 actuals, Hydro Ottawa staffing levels are set

to increase in 2021 from 2019 levels (see UPDATED Attachment 4-1-5(C): OEB Appendix 2-K -

Employee Costs). Ongoing and expected productivity improvements mean that the utility will be

10 able to accomplish more while ensuring overall headcount remains stable and associated

compensation costs are controlled. In addition, it should likewise be noted that Hydro Ottawa is

12 currently serving more customers than it was in 2015, with the customer base having increased

13 by almost 5%, as of the end of 2019.³

14

15 During the internal budgeting process at Hydro Ottawa for the 2021-2025 period, the initial

levels of OM&A expenditures proposed by the various Divisions within the utility translated into

an overall OM&A Compound Annual Growth Rate ("CAGR") of 3.5%.4 This growth was

attributable to increases in program activities, salaries and benefit costs, fuel costs, and market

priced contracts.

20

The proposed 2021-2025 OM&A spending levels were reviewed by the Executive Management

Team and several adjustments/reductions were made to the proposals. One significant

modification was that inflationary adjustments were not applied to programs where inflationary

growth was not already explicitly included (e.g. wages set through the collective bargaining

process). As a result, Hydro Ottawa will manage these programs and their associated costs to

26 2020 cost levels.

 $^{^{27}}$ 3 As of the end of 2015, Hydro Ottawa's total customer count was 323,919. This number increased to 339,771 as of

²⁸ the end of 2019. The addition of 15,852 customers during that timeframe is equivalent to approximately a 5%

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 1
Schedule 1
UPDATED
May 5, 2020
Page 7 of 7

In addition, Hydro Ottawa applied a custom OM&A productivity escalator to its planned 2021 OM&A levels. The custom escalator applied was 2.51%.⁵ The application of this custom escalation factor resulted in a reduction to OM&A spending over the 2021-2025 rate term of approximately \$13.1M. These savings will be achieved in large part through productivity and continuous improvement initiatives, as described in Exhibit 1-1-13: Productivity and Continuous

6 Improvement Initiatives. Hydro Ottawa is committed to productivity and continuous

7 improvement, and is confident that it has proposed a reasonable target for OM&A productivity.

89 3. PROPERTY TAXES

10 Property taxes are paid to the City of Ottawa annually based on the value of its buildings and

11 substations and the associated municipal tax rates. For more information, please see

12 UPDATED Exhibit 4-1-4: Operations, Maintenance and Administration Cost Drivers and

13 Program Variance Analysis.

14

5 4. DEPRECIATION AND AMORTIZATION EXPENSES

16 For more information regarding Hydro Ottawa's Depreciation and Amortization expenses,

please refer to UPDATED Exhibit 4-3-1: Depreciation, Amortization Disposal.

18

19 5. PAYMENTS IN LIEU OF TAXES

20 Pursuant to its obligations under Section 93 of the *Electricity Act, 1998*, Hydro Ottawa is liable

21 for the payment of PILS to the Ministry of Finance based on its taxable income. For more

22 information regarding PILS, please see **UPDATED** Exhibit 4-4-1: Payments in Lieu of Taxes.

²³ ⁵ For more information on this productivity escalator and how it was calculated, please see Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 1 of 12

UPDATED OPERATIONS, MAINTENANCE AND ADMINISTRATION PROGRAM

2 COSTS

3

1

4 1. INTRODUCTION

This Schedule provides a brief qualitative and quantitative summary of Hydro Ottawa's operations, maintenance and administration ("OM&A") expenditures. It also includes a brief overview of the composition of Hydro Ottawa's OM&A costs, trends, and business environment changes. This Schedule further describes Hydro Ottawa's approach to OM&A planning, and the top-down and bottom-up budget process used to arrive at the utility's OM&A expenditures. The inclusion of information in this Schedule is informed by the *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing Requirements").

13

14 2. OM&A SUMMARY

15 2.1. HYDRO OTTAWA'S APPROACH TO OM&A PLANNING AND BUDGETING

Hydro Ottawa's approach to OM&A planning and budgeting for the 2021-2025 period is guided by the utility's planning and performance management framework, which aligns corporate strategies with planning, operations, performance, and the drive for continuous improvement.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 2 of 12

Figure 1 – Hydro Ottawa's Integrated Planning & Performance Management Framework

- 3 The framework maintains that spending correspond to business priorities, be directed to achieve
- 4 performance targets, and support Hydro Ottawa's four key focus areas, as set out in its
- 5 2016-2020 Strategic Direction:

2

7

8

9

10

11 12

13

14

15

- **Customer Value:** we will deliver value across the entire customer experience by providing reliable, responsive and innovative services at competitive rates.
- **Financial Strength:** we will create sustainable growth in our business and our earnings by improving productivity and pursuing business growth opportunities that leverage our strengths our core capabilities, our assets and our people.
- Organizational Effectiveness: we will achieve performance excellence by cultivating a culture of innovation and continuous improvement.
- **Corporate Citizenship:** we will contribute to the well-being of the community by acting at all times as a responsible and engaged corporate citizen.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 3 of 12

Hydro Ottawa's 2021 OM&A budget was developed as a Test Year rebasing budget and is based on the utility's forecast of expenditures, as developed in its budget process. It was guided by the objectives and constraints articulated in a 2020-2025 budget planning memorandum issued by the utility's Chief Financial Officer to members of the Executive Management Team. Among other things, this memorandum included constraints on headcount, compensation, and OM&A. Hydro Ottawa's 2021 OM&A budget was further informed by substantive operational investments needed to maintain service reliability and safety, as well as those necessary to remain in compliance with regulatory and legislative requirements. Finally, the OM&A budget was informed by the need to maximize productivity and minimize bill impacts, while ensuring the financial health and viability of the utility.

11

For the 2022-2025 Test Years, Hydro Ottawa will adjust OM&A using a Custom Price Escalation Factor ("CPEF") to align with the principles of incentive regulation, as enshrined in the Renewed Regulatory Framework ("RRF"). Detailed information on the specific configuration of the CPEF is outlined in UPDATED Exhibit 1-1-10: Alignment with the Renewed Regulatory Framework. Hydro Ottawa's approach to adjusting the OM&A component of rates by the CPEF formula will result in the utility bearing the risk associated with any shortfall between revenues collected through rates and regularly incurred costs. This difference will be recovered through productivity initiatives and operational efficiencies. Further details regarding planned initiatives for the 2021-2025 period are discussed in Exhibit 1-1-13: Productivity and Continuous Improvement Initiatives.

22

3 2.2. OM&A BUDGET PROCESS

Hydro Ottawa undertook both a top-down and bottom-up forecasting exercise to develop the 25 2021-2025 budget. The budget forecasting exercise began with the preparation and issuance of a planning memorandum from the Chief Financial Officer (see section 2.1 above) that provided top-down guidance on the areas of constraints which were to inform the individual corporate Divisions in the bottom-up development of their budgets. Examples of top-down constraints and

¹ Please see Attachment 1-1-9(A): Corporate Memorandum - 2020-2025 Priorities and Budget Guidelines.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 4 of 12

expectations included constraints on hiring, compensation, and benefits, as well as expectations for productivity and cost control activity. Bottom-up funding requests were then developed, evaluated, and scrutinized based on priority and alignment with core strategic objectives as well as ratepayer impacts. Adjustments were subsequently made to the OM&A budget to reflect these priorities and impacts. The final OM&A budget was developed to accommodate Hydro Ottawa's operational requirements to provide a safe and reliable distribution system, while respecting legislative and regulatory obligations, including the conditions set forth in the utility's OEB-approved license. The OM&A budget was included in the assessment of customer rate impacts that were reviewed by Hydro Ottawa's senior management team and Board of Directors.

11

As noted above, the OM&A budget for the 2022-2025 Test Years was subsequently adjusted by a CPEF formula, consistent with the OEB's model for incentive regulation. Recognizing that Hydro Ottawa cannot accurately predict all potential OM&A funding requirements that may emerge during the 2021-2025 Custom Incentive Rate- term, the utility may avail itself of the cost recovery mechanism available under a Z factor application. Hydro Ottawa will only resort to using the Z factor mechanism if costs incurred arise from unforeseen events, decisions, or activities, the results of which cannot be reasonably anticipated or quantified at this juncture and where the costs exceed Hydro Ottawa's materiality threshold and satisfy OEB criteria. Examples include unforeseen weather events or changes to laws or regulations requiring significant implementation investment.²

22

3 2.3. OM&A TEST YEAR LEVELS

As established by the RRF, under a Price Cap IR rates are adjusted using a formulaic approach in the years following the first year base rates. This formula consists of a two component Price Cap Index ("PCI"): inflation and productivity. For electricity distributors, the formula includes an industry-specific inflation factor and two factors for productivity. One productivity factor is a fixed amount for industry-wide productivity, and the other is a stretch factor which is set each year

²⁹ Additional information on Hydro Ottawa's intended approach to Z factor applications is available in Exhibit 9-2-1:

³⁰ New Deferral and Variance Accounts.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 5 of 12

1 based on the level of productivity the distributor has achieved as evaluated by the Pacific

2 Economics Group ("PEG") econometric model.

3

4 Under a Custom Incentive Rate-Setting ("Custom IR") approach, the annual rate adjustment 5 must be based on a custom index supported by empirical evidence that can be tested. The 6 annual adjustment must include explicit financial incentives for continuous improvement and 7 cost control targets. As noted in the OEB's *Handbook for Utility Rate Applications*, "these 8 incentive elements, including a productivity factor, must be incorporated through a custom index 9 or an explicit revenue reduction over the term of the plan (not built into the cost forecast)."³

10

As a result, Hydro Ottawa is proposing to adopt a CPEF rate framework for years two through five, which is based on the approach approved by the OEB in Hydro Ottawa's 2016-2020 Custom IR application.⁴ This framework is aligned with OEB policy and based on sound ratemaking principles. The CPEF incorporates the OEB's key principles and expectations of a Custom IR application, and is structured in a way that:

16 17

18

19

20

- Includes productivity gains as part of the rate adjustment mechanism;
- Constrains operational funding increases going forward at approximately the rate of inflation; and
- Acknowledges the necessary funding requirements to address Hydro Ottawa's significant, multi-year investment needs over the 2021-2025 period.

2122

- 23 The proposed OM&A costs for the Test Years were developed by escalating the 2021 Test Year
- 24 OM&A levels by a CPEF of 2.51% in the years 2022 through 2025. For more information on
- 25 how this escalation factor was developed, please see UPDATED Exhibit 1-1-10: Alignment with
- 26 the Renewed Regulatory Framework.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 6 of 12

1 2.4. SUMMARY OF TOTAL OM&A EXPENDITURES

- 2 Hydro Ottawa's OM&A costs are significantly influenced by requirements to operate and
- 3 maintain a safe and reliable distribution grid, provide service levels that are satisfactory to
- 4 customers, and ensure continued compliance with all legislative and regulatory obligations.
- 5 Among other things, this entails a need for the utility to strategically manage its workforce in a
- 6 way that allows it to replace retiring workers with new tradespeople, and respond to the
- 7 changing dynamics of the market and operating environment in which it is tasked with the
- 8 distribution of electricity to customers.

- 10 Table 1 below provides a summary view of Hydro Ottawa's Historical, Bridge, and Test Year
- 11 OM&A expenditures and has been updated to incorporate 2019 actual results.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 7 of 12

Table 1 – AS ORIGINALLY SUBMITTED – OM&A Variances (\$'000s)

	2024	\$101,174	\$98,697	\$2,477	2.51%
	2025	\$103,714	\$101,174	\$2,539	2.51%

- 5 With respect to OM&A expenditures in 2019, total expenditures were lower than forecasted by
- 6 \$4.4M and were below 2018 levels by \$3.8M. The 2019 actual to 2019 forecast variance is
- 7 explained by the following:

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 8 of 12

- 1) Compensation was below forecast by \$2.5M due to reduced overtime, higher than anticipated position vacancies, and a variance in the WSIB Surcharge account (for which a rebate was received in 2019 due to improvement in claim status year-over-year).
- 2) Shared services provided by Hydro Ottawa Holding Inc. ("Holding Company") fell \$0.8M below the forecast. This decrease is largely explained by the utility's reduced share of the Holding Company's services, in the midst of continued expansion of the business activity of the utility's affiliates.
- 3) The remaining \$1.1M reduction was achieved by cost control and cost deferral. For example, an effort was made by the utility to mitigate cost increases in spills cleanup and overlapping ownership of facilities. In addition, the timing and pacing of OM&A expenditures resulted in cost deferral in certain instances. This was the case with select OM&A programs, for which the initiation of activities occurred later than the forecasted schedule as a result of contract renewal negotiations. Instead of 2019, some of these costs are expected to be incurred in 2020.

⁶ ⁵ CAGR represents the compound annual growth rate between 2016 and 2021.

⁷ Totals may not sum due to rounding.

In the 2019 forecast included in the original Application,
 \$3.7M in OM&A costs were reclassified to USofA Account
 4330, in relation to Shared Services (please see Appendix 2-N).

^{10 8} CAGR represents the compound annual growth rate between 2016 and 2021.

¹¹ Totals may not sum due to rounding.

¹² In 2019, \$3.2M in OM&A costs were reclassified to USofA Account 4330, in relation to Shared Services. Please

¹³ see UPDATED Attachment 3-2-1(B): OEB Appendix 2-N - 2016-2020 Shared Services and Corporate Cost

¹⁴ Allocation.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 10 of 12

1 Over the period of 2016-2021, overall OM&A expenses are set to experience a 2.6% increase

2 (using a compound annual growth rate). This is attributable to Hydro Ottawa's strong

3 commitment to productivity, continuous improvement, and cost control. The overall increase is

4 largely explained by increases in labour costs, as per Collective Agreements, as well as the

5 increased demand in distribution maintenance and technology. These increases are partially

6 offset by savings associated with productivity initiatives and cost control.

7

8 2.5.1. Operations and Maintenance Costs

- 9 Operations and maintenance are expected to increase by a compound annual growth rate of
- 10 3.1% over the course of 2016-2021. The increase to operations and maintenance-related costs
- 11 is partly attributable to increased costs associated with labour, and maintenance expenses
- 12 associated with operating and maintaining overhead and underground distribution lines,
- 13 feeders, transformers, and distribution stations. The principal cost drivers of the increases are
- 14 as follows:

15 16

17

19

- Higher volume of Preventative and Predictive Overhead, Underground Line, and Station Maintenance costs;
- Increase in Corrective Maintenance and Emergency Response costs;
 - Increase in System Operations costs;
- Technology costs, such as Supervisory Control and Data Acquisition ("SCADA"),
 Geographic Information System ("GIS"), and Asset Management software; and
- Increased labour and fleet costs.

- 24 The foregoing cost increases are mitigated by savings achieved through several productivity
- 25 initiatives, the largest one being a dark fibre lease. Once this lease is completely terminated in
- 26 2022, annual OM&A savings of \$1.1M are expected to accrue. The construction of Hydro
- 27 Ottawa's own dark fibre network is moving forward as part of the Telecom Master Plan included
- 28 in the utility's approved 2016-2020 Custom IR application. Construction of dark fibre is set to
- 29 strengthen overall grid reliability, while simultaneously reducing OM&A costs.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 11 of 12

1 2.5.2. Billing and Collections & Community Relations

2 Billing, Collections, and Community Relations costs increased by a compound annual growth rate of 1.3% from 2016 through 2021. Billing and collections expenses relate to costs associated with enabling customer billing services, conducting collections activities, and maintaining the billing system (including for purposes of satisfying new regulatory requirements). The principal cost drivers of the increases are the following:

7

9

10

1112

13

14

- Increase in postage rates;
- Increase in technology costs to ensure Hydro Ottawa's Customer Care & Billing system
 is complying with all new regulatory requirements (e.g. amendments to the OEB's
 Customer Service Rules and annual Disconnection Moratoriums); and
- Increase in technology costs to enhance customer experience. For example, customers are now communicating with Hydro Ottawa through numerous channels including voice, text, email, and web chat.¹¹

15

The foregoing cost increases were successfully offset by many cost control initiatives, including e-billing and automation. Hydro Ottawa maintains the highest e-billing participation rate of any distributor in Ontario (48% of customers), with an estimated corresponding cost avoidance of \$1.6M per year.

20

21 **2.5.3.** Administrative and General

- 22 From 2016 to 2021, Administrative and General costs increased by a compound annual growth
- 23 rate of 2.8%. Administrative costs generally reflect salary expenses, as well as costs associated
- 24 with Human Resources ("HR"), Information Technology ("IT"), Finance, Regulatory, Facilities,
- 25 Supply Chain, Warehouse, Legal, Communications, and Occupational Health, Safety and
- 26 Environment. The principal cost drivers of the increases are as follows:

2728

Compensation and benefits costs;

 ²⁹ ¹¹ For further information on Hydro Ottawa's enhanced customer communications and resulting increases in customer
 ³⁰ satisfaction, please see Attachment 1-2-1(B): Customer Strategy.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 3 UPDATED May 5, 2020 Page 12 of 12

- Higher demand for technological support (e.g. IT security, IT subscription, and system support) to meet higher customer expectations and diverse business and operational needs; and
 - Higher customer demand for communications from and with Hydro Ottawa, especially during outages and severe weather events.

6

1

3

4

5

7 2.6. INFLATION RATES AND FINANCIAL ASSUMPTIONS

8 Hydro Ottawa has assumed an inflation rate of 2.01% for 2021, for all non-compensation related 9 costs. 12

10

11 2.7. OVERVIEW OF OM&A PROGRAMS & EXPENDITURES

- 12 A full quantitative description and variance of Hydro Ottawa's program costs is available in
- 13 UPDATED Attachment 4-1-3(B): OEB Appendix 2-JC OM&A Programs Table. A qualitative
- 14 description of the utility's OM&A programs and an analysis of cost drivers can be found in
- 15 **UPDATED** Exhibit 4-1-4: Operations, Maintenance and Administration Cost Drivers and
- 16 Program Variance Analysis.

17

8 3. OM&A COST PER CUSTOMER AND PER FTE

- 19 UPDATED Attachment 4-1-3(C): OEB Appendix 2-L Recoverable OM&A Cost per Customer
- 20 and per Full Time Equivalent summarizes Hydro Ottawa's OM&A expenditures over the
- 21 Historical, Bridge, and 2021 Test Years, expressed on a per customer and per Full Time
- 22 Equivalent ("FTE") employee basis. The compounded growth rate in OM&A costs per customer
- 23 is 1.4% and per FTE is 2.3% over the 2016-2021 period.

²⁴ Conference Board of Canada, *Consumer Price Index - Canada* (October 2019).

Notes:

¹ Please provide a breakdown of the major components of each OM&A Program undertaken in each year. Please ensure that all Programs below the materiality threshold are included in the miscellaneous line. Add more Programs as required.

² The applicant should group projects appropriately and avoid presentations that result in classification of significant components of the OM&A budget in the miscellaneous category

Notes:

- If it has been more than four years since the applicant last filed a cost of service application, additional years of historical actuals should be incorporated into the table, as necessary, to go back to the last cost of service application. If the applicant last filed a cost of service application less than four years ago, a minimum of three years of actual information is required.
- 2 The method of calculating the number of customers must be identified. Should correspond with data provided in Appendix 2-IB.
- 3 The method of calculating the number of FTEs must be identified. See also Appendix 2-K.
- 4 The number of customers and the number of FTEs should correspond to mid-year or average of January 1 and December 31 figures.
- For the test year, the applicant should take into account the system O&M (line 22 of Appendix 2-AB) in developing its forecasted OM&A.

^{*} As outlined in UPDATED Attachment 4-1-5(A) - Employee Compensation Strategy, revisions have been made to 2016, 2017 and 2018 Number of FTEs due to a systemic error in spreadsheet templates.

UPDATED - Appendix 2-D Overhead Expense

Applicants are to provide a breakdown of OM&A before capitalization in the below table. OM&A before capitalization may be broken down by cost center, program, drivers or another format best suited to focus on capitalized vs. uncapitalized OM&A.

UPDATED OPERATIONS, MAINTENANCE AND ADMINISTRATION COST DRIVERS AND PROGRAM VARIANCE ANALYSIS

3

1

2

4 1. INTRODUCTION

- 5 This Schedule describes Hydro Ottawa's operations, maintenance and administration ("OM&A")
- 6 costs by major program. It also provides a year-over-year variance analysis and a major cost
- 7 driver variance summary. Variance explanations are provided for program costs with variances
- 8 greater than \$750K, consistent with the materiality threshold that the utility is employing for
- 9 purposes of this Application.¹

10

- 11 The information contained in this Schedule is guided by the Chapter 2 Filing Requirements for
- 12 Electricity Distribution Rate Applications, as updated on July 12, 2018 and addended on July 15,
- 13 2019 ("Filing Requirements").

14

15 2. OM&A COST DRIVERS

- 16 Table 1 below identifies the year-over-year cost drivers impacting Hydro Ottawa's OM&A.
- 17 Explanations for each cost driver are provided thereafter.

. .

¹⁸ Please see Exhibit 1-1-4: Administration for information on the utility's materiality threshold.

LABOUR COMPENSATION COSTS AND BENEFITS 3 2.1.

4 This first cost driver includes workforce planning, salary increases, step progressions, and 5 changes in insured and statutory benefits, pension, and vacancy allowance.

- 7 Negotiated salary increases and step progressions for unionized employees are determined as
- 8 per Hydro Ottawa's collective agreement with the International Brotherhood of Electrical
- 9 Workers ("IBEW"). The utility's current collective agreement with the IBEW expires on March 31,
- 10 2021. Comparable adjustments are forecasted as merit increases for management and
- 11 non-union employees.

¹² As displayed in UPDATED Attachment 4-1-4(A): OEB Appendix 2-JB: Recoverable OM&A Cost Driver Table

^{13 &}lt;sup>6</sup> The 2016 Opening Balance represents that which was approved by the OEB in the adjudication of Hydro Ottawa's 2016-2020 Custom Incentive Rate-Setting Distribution Rate Application (EB-2015-0004). Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 4 of 54

Hydro Ottawa has taken several proactive measures to contain compensation costs, as outlined in UPDATED Exhibit 4-1-5: Workforce Staffing and Compensation. Table 2 shows total compensation for employees over the 2016-2021 period, including salaries and benefits. The increase in 2018 is largely attributable to overtime costs that were incurred during the restoration activities following three extreme weather events which all caused significant damage to the electricity grid – an ice storm in April, a wind storm in May, and six tornadoes in the Ottawa area in September. As submitted in the utility's original Application, Compensation in 2019 is relatively flat in comparison to 2018, as overtime costs are at a four-year low. After accounting for 2019 actuals, compensation has decreased from 2018, which can be largely explained by reduced overtime, higher than anticipated position vacancies, and a variance in the WSIB Surcharge account - 2018. This account included a surcharge; however, a rebate was received in 2019 due to improvement in claim status year-over-year. Overall, as indicated by the compound annual growth rate ("CAGR") in Table 2 below, the annual average increase in total compensation costs over 2016-2021, including benefits, is 2.0%.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 5 of 54

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 8 of 54

1 2.2.1. Vegetation Management

2 Hydro Ottawa's Vegetation Management program is part of a preventative maintenance

- 3 approach with the overall goals of maintaining safety clearances and minimizing outages
- 4 caused by tree contact. The program involves the annual trimming of more than 40,000 trees
- 5 which are located near overhead power lines, both in the downtown core and in suburban
- 6 areas. The program is executed by contractors for an annual cost of approximately \$3.0M.

7

- The two key drivers of the contract costs are the number of trees trimmed each year and the
- 9 negotiated contract rate. The cost increase each year represents a general inflationary increase
- 10 built into the contract price.

11

12 In 2019, these contracts were re-tendered through a competitive procurement process and 13 renewed at a lower price point. This resulted in a CAGR rate of -1.9% for the program over the

14 2016-2021 period.

15

16 Figure 2 – Hydro Ottawa Crew Trimming Trees

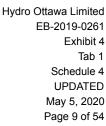

18

19 2.2.2. Underground Cable Locates

- 20 The Underground Cable Locates program is part of an overall Public Safety program. Within this
- 21 program, utilities, home owners, and contractors must call to confirm that any excavation area in
- 22 which they are working does not contain any buried utility infrastructure. The locate service is
- 23 then executed by Hydro Ottawa's contractors.

1

Figure 3 – Underground Cable Locates Public Safety Reminders

- 2 Underground Cable Locates requests are customer demand-driven and hence the volume
- 3 portion of the cost is not controllable by Hydro Ottawa. In the past three years, the volume of
- 4 calls have increased significantly, largely due to growing demand for fiber-to-the-home ("FTTH")
- 5 technology, which is expected to continue increasing. 19

7 In order to mitigate the associated costs, Hydro Ottawa negotiated an Alternate Locate

- 8 Agreement as part of a Local Distribution Company ("LDC") consortium which eliminates the
- 9 need for a locate for low-risk electricity infrastructure work (e.g. hand-digging tree roots). In
- 10 addition, in 2019 Hydro Ottawa changed its requirement for a relocate to be performed if the
- 11 previous locate is older than 30 days, with 60 days now serving as the new date of expiration.

¹² FTTH, also called "fiber to the premises" ("FTTP"), is the installation and use of optical fiber from a central point

¹³ directly to individual buildings – such as residences, apartment buildings, and businesses – in order to provide

¹⁴ high-speed internet access.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 10 of 54

1 This change will reduce the number of relocate requests and the associated costs without

2 negatively impacting public safety.

3

- 4 The CAGR for this program over the 2016-2021 period is 8.5%. As noted above, this relatively
- 5 high rate is driven primarily by customer volumes, with FTTH being the largest contributor. Table
- 6 4 below provides detail for two of the Historical Years, showing both the number of locate
- 7 requests and the average cost per request. The 2019 Historical Year has been added to the
- 8 updated version of Table 4 below. As a result, the number of locate requests and the average
- 9 cost per request have been updated.

10

11 Table 4 – AS ORIGINALLY SUBMITTED – Indicative Underground Cable Locates Costs

Year	# of Locates	Total Costs (\$'000,000s)	Average Cost per Locate
2017 Historical Year	87,622	\$2.2	\$25.10
2018 Historical Year	102,798	\$2.8	\$26.82
Percentage Variance	17.3%	25.4%	6.9%

12

13 Table 4 - UPDATED FOR 2019 ACTUALS - Indicative Underground Cable Locates Costs

Year	# of Locates	Total Costs (\$'000,000s)	Average Cost per Locate
2017 Historical Year	87,622	\$2.2	\$25.10
2018 Historical Year	102,798	\$2.8	\$26.82
2019 Historical Year	104,063	\$2.9	\$28.05
Percentage Variance (2019 vs. 2017)	18.8%	31.8%	11.8%

14

15 2.2.3. Spills Cleanup

- 16 The Spills Cleanup program costs are driven by the number of spills and the amount of
- 17 remediation work required.²⁰ The primary causes of spill cleanup are vehicle fluid spills (i.e.
- 18 engine oil, hydraulic oil, transmission fluid, etc.) and insulating oil spills from equipment, such as

^{19 20} This program excludes spills resulting from Damage to Plant.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 11 of 54

1 distribution transformers. Distribution transformers were the source of 95% of the reported spill

2 incidents from 2015-2018. Leaking transformers are identified through system operations as

3 well as the Underground Transformer Visual and Thermographic Inspection program (see

4 Figure 4 below for an example of a leaking transformer).

5

6 In 2018, there were 120 equipment oil spills identified, 59 of which required remediation. This 7 represented a 40% increase over the 2015-2017 average. This change was driven, in part, by

8 2018 inspections largely occurring in the eastern region of the City of Ottawa, where the

majority of transformers were installed during the 1980s. Not only are the transformers in this

o area advanced in age, they are situated much closer to the road as compared to other areas,

11 making them more susceptible to corrosion from salt and thus to a higher number of leaks.21

2 Although the spills were identified in 2018, the timing of the inspection program resulted in much

13 of the remediation work being completed in 2019, which resulted in the spike in program costs

14 during that year.

15

16 Hydro Ottawa is projecting program costs in 2020 and going forward to revert to normal ranges

17 and historical averages.

¹⁸ For more information on the asset demographics and lifecycle of transformers, including average age, please see

¹⁹ Section 6 of Exhibit 2-4-3: Distribution System Plan.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 14 of 54

Property taxes are paid to the City of Ottawa annually based on the value of the buildings and substations and the associated municipal tax rates. In 2019, the spike in taxes was due to the following: (i) overlap in property tax costs that arose during the transition from the Albion and Merivale properties to the Hunt Club and Dibblee properties; and (ii) the increase in the assessed values of the new properties. Property tax in 2020 is anticipated to be higher than 2018 due to higher assessed values from the new buildings only, as the Albion and Merivale buildings were sold in 2019. The percentage increase for the 2021 Test Year is based on the City of Ottawa's projection of a 3% increase.

9

Utilities include electricity, water, and natural gas. Utility costs are expected to decrease by half, largely due to the net metered solar arrays that were installed at the new buildings in 2019. Notwithstanding the fact that the move to the new facilities occurred during Q2 2019, the impact of this reduction is not seen until 2020 and 2021. This is on account of the overlap in costs experienced in 2019, as described above, with the transition between Albion and Merivale to Hunt Club and Dibblee. Amongst other things, the installation of the net metered solar arrays at the new facilities demonstrates Hydro Ottawa's leadership in the reduction of its environmental footprint. It also contributed to the utility being named one of Canada's Greenest Employers in 2019 (which marked the seventh occasion Hydro Ottawa has earned this distinction).

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 15 of 54

Figure 5 – Net Metered Solar Arrays at New Facilities

3

1

2

4 In addition to property taxes and utilities, the transition between Albion and Merivale to Hunt 5 Club and Dibblee entailed a duplication of other facilities-related operating costs, seeing as the 6 Merivale and Albion property sales closed in September and November 2019, respectively.

Moving costs of \$0.5M are also captured in the "Facilities Overlap" line in Table 5 above.

8

9 With respect to substation rentals, Hydro Ottawa and Hydro One Networks Inc. ("HONI") have 10 joint-use substations. In the case of Hydro Ottawa-owned substations at which HONI has 11 equipment, Hydro Ottawa has been charging HONI rent for the portion of the substation 12 occupied by HONI's equipment. HONI has recently indicated that it intends to commence a 13 reciprocal arrangement, in which it will charge Hydro Ottawa for the space occupied by Hydro 14 Ottawa's equipment at HONI-owned substations. Hydro Ottawa has not yet been charged an 15 amount by HONI. Using a similar methodology to its own, however, Hydro Ottawa estimates the 16 expected rental cost will be approximately \$0.6M.

17

Insurance premiums have been increasing approximately 5%-6% per year due to global market factors and higher insured values as new assets come on-line and replacement costs increase

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 16 of 54

for existing assets. In 2020, this increase is set to be higher, as a full property valuation exercise was completed for insured assets which resulted in an increase to the overall valuation of approximately \$100.0M. Along with the significant hardening of the insurance markets due to financial losses by the insurance industry, this has driven large increases for property insurance owned by Hydro Ottawa. Cyber security premiums have also risen significantly, as policy wording and coverage limits were strengthened to mitigate the increasing threat of cyber attacks.

8

9 Hydro Ottawa purchases approximately \$0.7M per year in fuel. These costs are driven both by market price and consumption. Fuel consumption generally ranges from 50,000 to 70,000 litres per month to support 234 vehicles and other transportation equipment.²⁸ The consumption for the Bridge Years and Test Year is relatively flat. However, fuel costs are expected to rise over the term of the utility's 2021-2025 rate plan.

14

15 2.4. OEB FEES AND CONSERVATION AND DEMAND MANAGEMENT ALLOCATION

The fourth key cost driver is related to fees assessed to Hydro Ottawa by the OEB, in accordance with the OEB's Cost Assessment model, and to conservation and demand management ("CDM") allocation costs. The utility has grouped these together, in light of the fact that they are outside of its control and are driven by public policy and regulatory requirements.

. .

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 18 of 54

1 Pursuant to modifications to its Cost Assessment model that were adopted in 2016, the OEB

2 has enabled Hydro Ottawa to record the difference between OEB cost assessments that were

3 built into the utility's 2016-2020 rates and cost assessments that resulted from the new model in

4 a balance sheet variance account.38 This treatment will not be applicable to Hydro Ottawa's

5 2021-2025 rates. Accordingly, the utility has included the full amount of OEB cost assessment

6 fees in OM&A starting in 2021.

7

3 On March 21, 2019, the 2015-2020 Conservation First Framework ("CFF") program

9 administered by the Independent Electricity System Operator ("IESO") was terminated, pursuant

to Ministerial directive. During this program, Hydro Ottawa was providing certain shared

11 services to its internal IESO-funded CDM program. These services included Human Resources

12 ("HR"), Facilities, Information Technology ("IT"), Finance, Communication, and Fleet, for a total

13 cost of \$0.6M, as shown in the 2017 and 2018 Historical Years columns in Table 6 above. As a

14 result, Hydro Ottawa's OM&A was reduced by the amount of this allocation during those years.

15 However, after the CFF wind-down period is complete in 2021, this shared service recovery will

16 cease.

17

18 2.5. CONTACT CENTRE, POSTAGE, AND BAD DEBT

19 The next category of cost driver involves matters pertaining to customer care and billing. As

20 shown in Table 7 below, contact centre, postage, and fluctuations in bad debt serve as the

21 primary drivers. The updated version of Table 7 below reflects 2019 actuals. Together, these

22 drivers are set to produce an overall reduction in costs during 2016-2021.

²³ Please see UPDATED Exhibit 4-2-4: Regulatory Costs for further details on the OEB's Cost Assessment model.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 19 of 54

Year-over-Year Variance44		\$0.3	\$(1.0)	\$(0.7)	\$0.8	\$0.0	

7 In 2017, Hydro Ottawa signed a contract with a new provider of contact centre services. This 8 resulted in lower costs and better service levels. The costs associated with contact centre 9 services are largely driven by the duration of customer calls. Call lengths have been reduced as 10 a result of increased automation, including planned outage notifications sent to customers in 11 advance through Auto Dialer, Move-In/Move-Out requests processed through the utility's web

6

1 portal, increased usage of MyAccount, and expanded communications through various social

2 media channels.45 The total contract cost for the contact centre was \$2.0M in 2016; by 2021, it

3 is expected to be \$1.7M.

4

Postage rates have historically increased by 3% per year, while Hydro Ottawa's customer growth has averaged 1% per year. Despite these trends, the utility is showing a CAGR of -3.2% on account of its continued success in enrolling customers in e-billing. Hydro Ottawa has achieved the highest e-billing participation rate among Ontario LDCs (almost 50% of customers), which has translated into an estimated annual savings of \$1.9M in avoided postage and printing costs.

11

Bad debt increased significantly in 2017, when the OEB first introduced the Disconnection Moratorium for electricity distributors. To address this increase, Hydro Ottawa undertook several mitigation efforts, including the implementation of Auto Dialer functionality. The Auto Dialer replaced the hand-delivery of the 48-hour warning notices, meaning more customers can be reached and reminded of payments in a much more timely fashion. Since the launch of the Auto Dialer solution, bad debt expenses have been trending more positively. Bad Debt as a percentage of Total Electricity Revenue is a metric that continues to be monitored by the utility, and since 2017, performance has trended in a positive direction. Despite the Disconnection Moratorium, the utility anticipates that bad debt will eventually return to pre-2017 levels.

21

22 **2.6. DARK FIBER FEES**

The construction of an optical telecommunications network was approved by the OEB, as part of Hydro Ottawa's last rebasing application.⁴⁶ In 2019, the utility began transitioning from the current leased fiber to the new fiber optic network in stages. The exit fees from the lease contracts (based on the contract terms and conditions) are shown in Table 8 below, which has

²⁷ More information on these initiatives is available in Exhibit 1-1-13: Productivity and Continuous Improvement

 $^{^{29}}$ 46 Ontario Energy Board, *Decision and Order*, EB-2015-0004 (December 22, 2015).

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 21 of 54

- 1 been updated to account for 2019 actuals. Hydro Ottawa expects to exit all of its lease contracts
- 2 by 2022, which will result in a permanent operating cost reduction of \$1.0M.

Table 8 – AS ORIGINALLY SUBMITTED – Summary of Dark Fiber Lease and Exit Fees (\$'000,000s)

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 22 of 54

1 customer experience; evolution of the grid; increased productivity through automation; and

2 participation in energy innovation and technology.

3

4 As dependence on technology and automation increases, costs can as well. As the Digital

5 Strategy continues to evolve and align with best practices, Hydro Ottawa is seeking

6 readily-available solutions that best fit our business needs. In many instances, this has taken

7 the form of the utility moving away from traditional on-premise solutions to cloud-based options.

8 Cloud-based options simplify internal infrastructure and leverage turnkey options offered by

9 cloud solutions. With this cloud-based focus, Hydro Ottawa has realized a year-over-year

increase in IT subscriptions, resulting in a CAGR of 7.9% over the 2016-2021 period, as shown

11 in Table 9 below.

12

13 One of the cost evaluation and control measures applied by Hydro Ottawa to this critical and

14 growing part of the business is benchmarking. For a copy of the IT Budget Assessment

15 Benchmark study that was prepared to support the development of this Application, please refer

16 to Attachment 1-1-12(F).

1718

Table 9 – Summary of Technology Costs (\$'000,000s)

19

20 2.8. SERVICE LEVEL AGREEMENT COSTS RECLASSIFICATION

- 21 Consistent with section 2.4.3.2 of the Filing Requirements and OEB guidance issued in 2018,
- 22 Service Level Agreement ("SLA") costs were no longer included in OM&A as of 2019.55 (Please

²³ CAGR represents the compound annual growth rate between 2016 and 2021.

²⁴ Variance may exist due to rounding.

²⁵ Ontario Energy Board, Presentation re: Chapter 1 & 2 Filing Requirements Update for 2019 Applications: Summary

²⁶ of Key Changes (July 19, 2018), slides 15-16.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 23 of 54

see Exhibit 4-2-1: Shared Services and Corporate Cost Allocation and UPDATED Exhibit 3-2-1:
Other Revenue Summary for details). Prior to 2019, Hydro Ottawa recorded the SLA revenue in
USofA 4325 as Revenues from Merchandising and Jobbing, but left the associated costs in
OM&A. With the growth of Hydro Ottawa's affiliate business activity, the amounts charged to
these affiliates and the associated costs through SLAs increased significantly, as outlined in
Attachment 4-2-1(A): OEB Appendix 2-N - Shared Services and Corporate Cost Allocation,
which has been updated for 2019 actuals and can be found in UPDATED Attachment 3-2-1(B):
OEB Appendix 2-N - Shared Services and Corporate Cost Allocation. The costs, along with the
associated SLA revenue, are now reported in USofA 4330 Costs from Merchandising and
Jobbing and are deducted from Hydro Ottawa's OM&A.

11

12 3. OM&A PROGRAM COST & VARIANCE ANALYSIS

Pursuant to section 2.4.3 of the Filing Requirements, the following section provides a variance analysis for the 2016-2021 period of Hydro Ottawa's OM&A costs by major program. Table 10 provides Historical, Bridge, and Test Year expenditures by the program categories and the five-year CAGR for each program category. The updated version of Table 10 below reflects 2019 actuals using 2016-2019 Historical Years, 2020 Bridge Year, and 2021 Test Year. Table 11, which has also been updated for 2019 actuals, provides a year-over-year analysis of variances per program, as expressed in both dollar and percentage terms. Any variances exceeding the \$750K materiality threshold for this Application are explained. The OM&A program costs shown in Table 10 are net of any allocations to the capital programs and, as of 2019, net of the SLA costs discussed in section 2.8 above.

23

24 UPDATED Attachment 4-1-3(D): OEB Appendix 2-D - Overhead Expenses details both the OM&A costs by program before capitalization, as well as the OM&A that has been capitalized. Hydro Ottawa's capitalized overhead costs conform with the OEB's policy on capitalization. The capitalization policy has not changed since 2016, with the percentage of OM&A costs capitalized representing between 26% and 29%. For more details on the utility's capitalization policy, please see Exhibit 2-4-4: Capitalization Policy.

1

 $^{^{4}\,\,}$ Totals may not sum due to rounding.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 28 of 54

1 3.1. COLLECTIONS, ACCOUNTS AND ACTIVITIES

- 2 The Collections, Accounts and Activities program captures costs associated with Hydro
- 3 Ottawa's collection activities and bad debt expense. The two main costs in this category are
- 4 compensation and benefits, and bad debt expense.

5

- 6 The CAGR for this program is 1.6%. Despite higher demand and growth in collection activities,
- 7 headcount in this program remained flat due to increased automation. The most notable and
- 8 successful example of the use of automated technology is the implementation of the Auto Dialer
- 9 solution in 2017. This initiative was implemented to help mitigate the high bad debt expense that
- 10 was triggered by the imposition of the Disconnection Moratorium.

- 12 The Auto Dialer functionality was put in place to replace the 48-hour warning notices that were
- 13 previously hand-delivered in advance of a disconnection for non-payment. The Auto Dialer costs
- only \$0.26 per notice vs. hand-delivery at a combined labour and fleet hourly rate of \$80. The
- 15 number of hand-delivered 48-hour warning notices sent to customers dropped from 56,746 in
- 16 2016 to only 5,300 in 2018. This initiative reduced Hydro Ottawa's bad debt expense and other
- 17 operational costs such as fuel, while increasing staff capacity to focus on higher-value work.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 29 of 54

Figure 6 – 48-Hour Warning Disconnection Notice

Visit hydroottawa.com/lov-income-assistance for more information.

3 The year-over-year variances in this program are mainly due to fluctuations in bad debt 4 expense. The increase in 2017 was attributable to the inaugural implementation of a

5 Disconnection Moratorium, which resulted in high accounts receivable aging and associated

6 bad debt expense. In 2018, the bad debt expense dropped, due to the utility's mitigation efforts

7 described above. The expectation is that these levels will be maintained over the 2020-2021

8 period.

9

1

2

10 "Bad Debt as a % of Total Electricity Revenue" is a metric that is being monitored and

11 performance since 2017 is trending in a positive direction.

12

13 3.2. CORPORATE COSTS

- 14 The Corporate Costs category primarily captures insurance, Future Employee Benefit Costs,
- 15 and management fees from Hydro Ottawa's parent company, Hydro Ottawa Holding Inc.
- 16 (Please refer to Exhibit 4-2-1: Shared Services and Corporate Cost Allocation for additional
- 17 details on management fees).

8 represents a true-up of the balance.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 30 of 54

1 Corporate Costs show a decrease in 2017 compared to 2016 due to the recognition of 2 non-vested sick leave credits of \$1.5M in 2016. In 2016, a liability and associated expense was 3 recognized for accumulated sick leave credits for unionized employees based on an actuarial 4 valuation of \$1.5M. Hydro Ottawa's unionized employees earn sick leave days each year and 5 unused days are carried forward for use in future years. However, when an employee retires or 6 is terminated, there is no pay-out of the accumulated sick leave credits since they do not vest. 7 The expense in each of the remaining Historical, Bridge, and Test Years is minimal as it only

9

After accounting for 2019 actuals, 2019 Corporate Costs dropped by \$1.3M. This can be partially explained by the variance in the WSIB Surcharge account - 2018, which included a surcharge. However, a rebate was received in 2019 due to improvement in claim status year-over-year. The expectation for 2020 is back to a neutral level (i.e. neither rebate nor surcharge).

15

The CAGR for Corporate Costs, excluding this one-time amount of \$1.5M in non-vested sick leave credits, is approximately 2.4%. All items remain relatively flat except for insurance premiums, which are on the rise because of the following reasons:

19 20

21

22

23

24

2526

- Higher overall insured property values (including for Hydro Ottawa's new administrative
 and operations buildings), new substations, and the increase in replacement costs of the
 existing substations directly affect the cost of the policy.
- The property market has seen significant "hardening of the market" due to large financial losses incurred by insurance companies globally, which they are looking to recover. This includes catastrophic events in Canada such as wildfires (Fort McMurray), flooding (Calgary, eastern Canada), tornadoes (Ontario, including Ottawa) and an increasing number of wind and ice storms.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 31 of 54

• For a utility like Hydro Ottawa, cyber threats are increasing, and ever-changing in complexity and volume. Higher premiums for cyber coverage reflect the increased coverage and limits required to mitigate cyber threats.

4

3

1

5 3.3. CUSTOMER AND COMMUNITY RELATIONS

The Customer and Community Relations program captures costs associated with customer experience, Key Accounts, customer contact, and communications staff. Half of the costs are salaries and benefits. The other half includes the Customer Contact Centre services, technology costs, media communications, and the administration of the provincially-mandated Low-Income Energy Assistance Program ("LEAP") and Ontario Electricity Support Program ("OESP").

11

As discussed in Exhibit 4-1-6: Conservation and Demand Management, despite the previous IESO-funded, LDC-delivered CDM program being terminated in 2019, Hydro Ottawa proposes to sustain a level of customer engagement, community outreach, and collaboration with other industry players in the CDM space, in order to remain a trusted advisor to its customers and to be able to partner in the pursuit of a smart energy future.

17

Through the effective delivery of CDM programming to its customers over the past 15 years, Hydro Ottawa has established a solid reputation as a trusted advisor providing energy-saving expertise in Ottawa's communities. By engaging customers in energy efficiency initiatives, the utility's goal is to reduce total electricity usage, avoid energy waste, and encourage customers to use less energy at times of high demand in Ottawa so as to support province-wide system needs.

24

25 Hydro Ottawa is proposing to continue this type of CDM programming starting in mid-2021, with 26 funding recovered through rates – \$0.2M in 2021, seeing as that year's needs are only partial, 27 following on the heels of the expiration of the CFF framework, and \$0.5M from 2022-2025. This 28 funding would be allocated to compensation, marketing, and miscellaneous costs.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 32 of 54

- 1 Contact centre service costs were reduced substantially from 2016, as a result of a transition to
- 2 a new service provider and a decrease in average call duration. The reduction in call minutes is
- 3 attributable to increased automation: planned outage notifications sent to customers in advance
- 4 through Auto Dialer, Move-In/Move-Out requests processed through a web portal, increased
- 5 usage of MyAccount, and increased communications through various social media channels.
- 6 The reduction of contact centre costs was paired with an increase in service offerings from
- 7 Hydro Ottawa. Contact centre hours were extended to include Saturday. In addition, several
- 8 additional technology improvements have been implemented including the following:

9

10

11

- Social login customers can now login to their Hydro Ottawa account using their passwords for email, Facebook, and Google.
- Customer service is available in 120 languages.
- Call-back assist customers can request a call-back versus waiting on hold.
- Streamlined call-in system one number for both outages and services.
 - Customer self-serve telephony uses voice recognition technology known as "My Voice is My Password."

17

15

16

- 18 The increase in 2020 from 2019 is largely explained by investments in increased automation,
- 19 including administration and technical support for Hydro Ottawa's mobile application program
- 20 and Field Service Management. These solutions will enhance the customer experience and the
- 21 efficiency of field operations.

22

23 3.4. CUSTOMER BILLING

- 24 Customer billing includes costs associated with Billing, Meter to Cash ("MTC"), and Meter Data
- 25 operations and staff.⁶² Technology costs represent about 40% of overall costs, while
- 26 compensation represents approximately 33%.

29 for electricity revenue billing.

²⁷ The MTC group includes the Enterprise Customer Care & Billing System application, Advanced Metering

²⁸ Infrastructure and related applications and data flows which enable business operations, and regulatory compliance

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 33 of 54

The overall program costs decreased by an average of 0.6%. These savings are largely associated with a reduction in postage costs on account of increased rates of e-billing enrollment. As noted above, Hydro Ottawa has achieved the highest e-billing participation rate among Ontario LDCs (almost 50% of customers), with estimated annual savings of \$1.9M in avoided postage and printing costs. As an added benefit, Hydro Ottawa's e-billing success is also helping the environment by reducing the use of paper and transportation.

7

Figure 7 – E-Billing "Go Paperless" Campaign⁶³

9

10

These postage savings are partially offset by increases in compensation and benefit costs, while the headcount in this area remained flat. The reduction in 2019, and the subsequent in 2020, are due to the timing of the Customer Care & Billing System ungreade project.

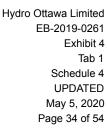

13 increase in 2020, are due to the timing of the Customer Care & Billing System upgrade project

14 and the capitalization of internal resources dedicated to the development, configuration, and

15 implementation of the program whereby not all of the resources were backfilled.

_

 ^{16 63} Hydro Ottawa's donations to the Children's Hospital of Eastern Ontario ("CHEO") through its "Go Paperless"
 17 campaign are not rate-recoverable. Please see 4-2-6: Charitable and Political Donations for details.

1 3.5. DISTRIBUTION OPERATIONS

- 2 Distribution Operations includes costs associated with the operations and maintenance of Hydro
- 3 Ottawa's distribution assets. Programs in this area include Vegetation Management,
- 4 Underground Cable Locates, Pole Inspections, Cable Inspections, Infra-Red ("IR") Scanning,
- 5 Load Dispatching, and other general maintenance.
- 7 Distribution Operations spending increased \$1.1M in 2017 (6%) vs. 2016 and \$0.4M (2%) in
- 8 2018 vs. 2017. Spending subsequently decreased \$1.2M in 2019 (6%) vs. 2018. The major
- 9 increases are driven by a larger volume of work and are associated with the following
- 10 distribution maintenance programs:
 - Vegetation Management: the Vegetation Management Program is a prevention investment that is designed to produce long-term reliability gains, while maintaining safety clearance requirements. Trees that contact power lines are one of the major causes of power failure. Hydro Ottawa's System Average Interruption Frequency Index ("SAIFI") caused by tree contacts remained low at 0.08 to 0.12 through 2016-2018, while the industry average was 0.18. ⁶⁴ Planned cycle trim costs averaged \$2.7M annually from 2016-2018. However, several significant adverse weather events in 2017 and 2018 contributed to higher than expected total spend over that timeframe (\$0.4M in total storm response costs in 2017 and \$0.5M in 2018). Storm response decreased in 2019, which contributed to a \$0.3M reduction in outside services from 2018. Over 80% of the program costs are related to outside services. Program costs are expected to decrease through 2021, as a result of Hydro Ottawa having re-tendered and renegotiated its service provider contract in 2019. Renegotiation efforts in 2019 led to delays in planned cycle trim efforts that will catch up in 2020.

23

24

25

• Underground Cable Locates: the Underground Cable Locates program costs increased over the period of 2016-2020. Two-thirds of the increase is volume-related

²⁹ 64 Source: 2016-2018 Canadian Electricity Association Service Continuity Reporting.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 35 of 54

(i.e. customer demand), while the remaining one-third is due to inflationary pricing increases in Hydro Ottawa's external vendor contract. (Please see section 2.2 above). In 2018, Telecom companies' FTTH initiatives in Ottawa prompted an approximately 20% increase in locate volumes over 2016-2017 levels. This volume increase translated into a rise in costs from \$2.2M in 2017 to 2.7M in 2018 and to \$2.9M in 2019. Volumes are expected to continue growing through 2025. Hydro Ottawa has taken several steps to control program costs, including the establishment of Alternate Locate Agreements in situations where an approved excavator can dig without receiving a traditional locate and the extension of the validity period for locates from 30 to 60 days.

10

1

3

4

5

6

7

8

9

Despite the cost increases in the foregoing programs, the average annual growth rate for overall Distribution Operations remained 3.9%.

13

The \$1.0M increase in 2021 from 2020, as submitted in the utility's original Application, represents a 5% increase. After taking 2019 actuals into account, Distribution Operations spending is set to increase \$2.2M in 2020 (12%) vs. 2019 actuals, and by an additional \$1.1M in 2021 from 2020 (5%). This is largely explained by vacant positions which are expected to be filled in 2020, as well as general compensation increases, as per collective agreements and insured and statutory benefits. Other increases are driven by volume and contract price increases for distribution maintenance.

21

Table 12 below, which has been updated for 2019 actuals, provides a summary of Distribution Operations by category.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 **UPDATED** May 5, 2020 Page 36 of 54

Asset / Activity	Description						
Cable Chamber	Cable Chamber Inspection Condition inspection of Hydro Ottawa and customer-owned cable chambers, which are integral to Hydro Ottawa's system. The inspection includes reviewing the condition of the collar, lid, roof, and walls. Cable chamber components that pose an immediate risk to the public, workers, or reliability of the distribution system are identified for immediate corrective actions. If they pose a reduced risk they are identified for planned corrective actions at a later date.						
Distribution Poles	Pole Inspection Work to inspect and test all Hydro Ottawa distribution poles, on a 10-year cycle. Inspection information and estimated remaining strength, using the results of non-destructive resistograph drill tests, are used to assess the pole's condition. Condition information is used to identify and prioritize pole replacement programs.						
Insulator Washing	Insulator Washing Overhead Costs associated with the planned washing of Hydro Ottawa's overhead insulators, in areas subjected to salt spray and heavy contamination to prevent insulation breakdown and pole fires.						
Overhead Inspection	Overhead Thermographic Inspection Costs associated with the overhead thermographic scanning of all overhead assets on a 3-year cycle. Scanning is used to detect abnormal temperature conditions in equipment and connections.						
Overhead Maintenance	Overhead Switch Maintenance Planned detailed inspection and corrective maintenance of Hydro Ottawa's critical overhead distribution switchgear (switch and controls).						
Underground Maintenance	Hydro-Owned Vault Maintenance Planned maintenance of Hydro Ottawa-owned easement/shared vaults within customer facilities. This planned program subjects its vault transformers to a visual and thermographic inspection in addition to minor cleaning.						
Transformers - Underground	Graffiti Abatement Work associated with Hydro Ottawa's Graffiti Abatement program supports compliance with the City of Ottawa's Graffiti By–Law.						
Onderground	Padmount Transformer Painting Planned painting of Hydro Ottawa's padmount transformers, where the finish has deteriorated overtime.						
General Plant	SCADA Maintenance Planned maintenance of Hydro Ottawa Supervisory Control and Data Acquisition ("SCADA") devices. Includes visual inspection, checking communication, cleaning, torquing, and function testing.						
Underground Lines & Feeders	Cable Testing Planned testing of Hydro Ottawa's in—service distribution cable. Testing is completed using non-destructive testing technology to determine the cable's probability of failure resulting from water tree migration. The testing results are used to prioritize cable replacement programs.						
Customer Operating	Field Ops Vault Inspections Inspection of customer-owned vaults to identify deficiencies found that would affect operations or safety. Issues are flagged to equipment owners for corrective action.						
Underground Switchgear	Switchgear CO2 Wash – Padmounted Gear Dry–ice washing of Hydro Ottawa's air insulated underground distribution switchgear, including cleaning of its internal mechanism.						
Underground Thermographic	Underground Switchgear Thermographic and Visual Inspection Visual and thermographic inspection of Hydro Ottawa's gas-insulated and air-insulated distribution padmount switchgear.						
Inspection	Underground Transformer Thermographic and Visual Inspection Visual and thermographic inspection of Hydro Ottawa's underground transformers.

3

2

4 3.5.5. Distribution Maintenance

- 5 This category includes unplanned work to repair or maintain the distribution system. Table 17
- 6 below contains Asset / Activity descriptions for Distribution Maintenance.

1

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 44 of 54

Table 17 – Asset/Activity Descriptions for Distribution Maintenance

Asset / Activity	Description				
Asbestos Removal	Asbestos Removal & Re–fireproofing Removal of asbestos fireproofing from distribution cables and installing new arc-proof tape.				
Poles & Towers	Repair Poles & Fixtures Repair and maintenance of poles and fixtures, excluding guy and anchor repairs.				
	Repair Guying Repair and maintenance of pole guying and anchors.				
Overhead Maintenance	Overhead Repairs – Conductors & Devices Overhauling and repairing line switches and reclosers. Cleaning Insulators and Bushings. Refusing line cut–outs. Excludes repairs to grounding.				
	Repair Pole Grounds Repairing pole grounds.				
Overhead Services	Overhead Repairs – Secondary Services Repair of overhead secondary conductors.				
Underground Conduit	Underground Repairs – Conduit Moving or changing position of conduit or pipe. Minor alteration repairs or moving racks, ladders, or hangers in hand holes or manholes.				
	Underground Repairs – Secondary Conductor & Devices Repairing secondary conductors, splices, and connections. Repairing or moving junction boxes				
Underground Conductors	Switchgear Maintenance Repair of underground switches, breakers, and control wiring.				
and Devices	Underground Repairs – Primary Conductors & Devices Repairing conductors, splices, and connections. Repairing or moving junction boxes and potheads. Re–fireproofing cable and repairing supports. Excludes services.				
Underground Services	Underground Repairs – Secondary Services Repair of underground secondary services.				
Transformers - Overhead	Transformer Repairs – Overhead Transformers Renewing oil, painting and the like, that is necessary to keep equipment in service. Includes transformer lightning arresters.				
Transformers - Underground	Transformer Repairs – Underground Transformers Renewing oil, painting, and the like that is necessary to keep the equipment in service. Includes transformer lightning arresters.				

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 45 of 54

1 3.5.6. Stations Maintenance

- 2 This category includes all planned and unplanned work associated with station maintenance.
- 3 Table 18 contains Asset / Activity descriptions for Station Maintenance.

5

Table 18 – Asset/Activity Descriptions for Station Maintenance

Asset / Activity	Description
,	Transformer & Tap Changer Preventative Maintenance Work associated with planned preventative maintenance of station transformers and tap changers. Work is carried out every three to five years, and includes electrical testing and mechanical maintenance. Transformer tap changer maintenance intervals vary with the type.
	Transformer & Tap Changer Reactive Maintenance All work associated with unplanned corrective maintenance of station transformers and tap changers.
Station Transformers	Transformer Inspection Work associated with Hydro Ottawa's annual predictive station transformer maintenance, which includes a detailed visual inspection and infrared scans.
	Transformer Oil Analysis Work associated with oil-dissolved gas and oil quality analysis, undertaken as part of annual transformer predictive maintenance. This program includes a furan analysis to assess the degradation of the transformer's paper insulation, which is completed on a 5-year cycle.
	Transformer Monitor Maintenance Work associated with maintaining temperature controllers and online dissolved gas analysis monitors ("ODGA") on station transformers. These monitors support continuous monitoring of station transformers through SCADA to provide operational and asset condition related information.
	Switchgear & Breaker Inspection All work associated with annual visual and thermographic inspection of station breaker, switchgear, and components.
Station Switchgear	Switchgear & Breaker Maintenance - Preventative All work associated with planned maintenance of station breakers, switchgear and components. Work is carried out every four to six years. Preventative maintenance is performed on breakers, including electrical, mechanical, and type-specific maintenance tasks.
	Every 10 years, detailed preventative maintenance is performed on the entire switchgear assembly, including detailed internal visual inspections, insulation resistance tests, and ensuring that there are no structural deficiencies in the switchgear (e.g. cracks, leaks, or warped metal).

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 46 of 54

Asset / Activity (Cont'd)	Description (Cont'd)					
Station Switchgear	Switchgear & Breaker Maintenance - Reactive All work associated with unplanned maintenance of station breakers, switchgear, and components.					
Relays	Relay Maintenance - Preventative All work associated with planned maintenance of relays. Relay maintenance includes function testing, calibration of electromechanical relays, and protection setting updates, if required.					
	Relay Maintenance - Reactive All work associated with unplanned maintenance of relays.					
DC System	DC System Maintenance - Preventative Work associated with planned annual maintenance of station DC systems (Batteries and Chargers). Detailed predictive maintenance is performed on station battery banks and chargers. This includes a detailed visual inspection, infrared scan, as well as electrical and mechanical tests.					
	DC System Maintenance - Reactive All work associated with unplanned maintenance of station DC systems, batteries, and chargers.					
Structures	Station Structures All work associated with maintenance of station structures.					
IR Scan	Station IR Scanning Planned thermographic scanning in stations.					
Station Inspections	Station Inspections Hydro Ottawa performs monthly station inspections to check for any deficiencies and initiate corrective actions. Annual thermographic scan of all electrical components in the station is completed.

Figure 12 – Station Transformer Maintenance

3

2

1

4 3.6. ENGINEERING AND DESIGN

- 5 The Engineering and Design program includes costs associated with Distribution Design,
- 6 System Operations, Asset Planning, Policies, Procedures, and Standards. Over 80% of the
- 7 costs are labour costs, with the remaining 20% being mostly technology costs related to the
- 8 Geographic Information System ("GIS") system, SCADA, and the asset management software
- 9 Copperleaf C55.⁷³

¹⁰ Please see section 1.8 of Exhibit 2-4-3: Distribution System Plan for more information on these items.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 48 of 54

Costs were flat through 2019, as reflected in the utility's original Application, and decreased \$0.7M after accounting for 2019 actuals, but are set to increase in 2020 due to technical support requirements for the new SCADA system and growing organizational demand for technical support in maintenance programs and standards. Higher costs in IT license and maintenance contracts, as well as general compensation and benefit increases, are also a factor. The decrease in 2019 is primarily due to compensation, which is attributed to both overtime costs (which were at a four-year low) and vacancies that were not filled. Vacant positions are expected to be filled in 2020.

9

0 3.7. FACILITIES

The Facilities program costs consist of maintenance and operating costs for Hydro Ottawa's administrative and operations buildings and substations. Such costs include summer and winter civil maintenance, cleaning, waste management, building electrical, mechanical, safety, security, general repair, utilities, and property taxes. Approximately 40% of total program costs are property taxes.

16

In 2019, as submitted in the utility's original Application, Facilities program costs increased by \$2.4M, or 34%, and \$2.8M, or 39%, after accounting for 2019 actuals, primarily on account of the timing overlap in the sale of the utility's old buildings and the occupation of its new ones, in addition to other one-time costs such as moving expenses. This overlap spike is temporary in nature, as reflected in the \$2.2M reduction anticipated in 2020. After accounting for 2019 actuals, the revised reduction is anticipated to be \$2.6M in 2020.

23

There is also a reduction in utility costs in 2020 due to the net metered solar arrays at the new facilities, which help offset utility costs. However, these savings will themselves be offset by substation rental charges payable to HONI, as discussed in section 2.3 above.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 49 of 54

1 3.8. FINANCE

6

14

19

22

27

2 The Finance program costs consist primarily of salaries and benefits relating to functions such

3 as accounts receivable and payable, capital asset accounting, banking, audit, budget and

4 accounting support, and financial reporting. Compensation is the main cost driver of the

5 program, however headcount has remained steady over the past four years.

7 The \$0.9M, or 23%, cost reduction in 2019 vs. 2018 (which has been updated to \$0.7M, or 17%,

8 after accounting for 2019 actuals) is attributable to SLA Reclassification, as explained in section

9 2.8 above. Many Finance employees provide services to affiliates. Had this reduction not

10 occurred, 2019 Finance costs would have been \$3.8M. When taking 2019 actuals into account,

11 Finance costs would have been \$4.0M. This latter figure would have nevertheless still

12 represented a cost reduction from 2018 due to the successful execution of various productivity

13 initiatives and an enduring commitment to cost control.

15 Finance program costs in 2019, 2020, and 2021 include cost-saving impacts relating to the

16 elimination of external support for cheque payment processing. The volume of cheques and

7 reduction in equipment and technology costs have proven that internal payment processing will

18 be less costly.

20 When excluding the aforementioned SLA reclassification, the CAGR for Finance program costs

21 between 2016 and 2021 is 1%.

23 3.9. HUMAN RESOURCES & TRAINING

- Included in the Human Resource & Training program are costs pertaining to the provision of HR
- 25 support, talent development, trades-specific training, labour relations legal costs, and payroll
- 26 administration costs.

28 Spending has been relatively steady in this program. The drop, as submitted in the utility's

29 original Application, in 2019 of \$0.5M, or 12% (which has been updated to a drop of \$0.8M, or

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 50 of 54

1 19% after accounting for 2019 actuals) is connected with SLA Reclassifications, as explained in

2 section 2.8 above. All variances are below the materiality threshold.

3

4 3.10. INFORMATION MANAGEMENT AND TECHNOLOGY

5 The Information Management and Technology ("IM&T") program is comprised of compensation 6 and benefits and externally-sourced operating costs to deliver services relating to IT

7 Infrastructure, including Helpdesk Support, Application Support, Data Management, Information

8 Management, IT Security (cybersecurity), and IT Project Planning. As described in Exhibit

9 1-1-13: Productivity and Continuous Improvement Initiatives, many technology and automation

0 initiatives have been implemented since 2016, which has helped to cascade efficiency savings

11 throughout other programs across Hydro Ottawa.

12

The \$2.4M, or 29%, increase in 2018 vs. 2017 is largely explained by post-go-live activities associated with the Enterprise Resource Planning ("ERP") upgrades and Human Resource Capital (i.e. Workday) system implementation completed at the end of 2017. More specifically, in 2018, following a stabilization period, the incorporation of additional features and modules into the ERP and Workday systems led to further automation of business processes and thus leveraged the previous year's investments.

19

The decrease in 2019 of \$0.9M, or 8%, is connected with SLA Reclassifications, as explained in section 2.8 above. The increase in 2020 vs. 2019, as submitted in the utility's original Application, is \$1.4M, or 14% (which has been updated to an increase of \$2.1M, or 22% after taking 2019 actuals into account). This increase is primarily due to a one-time termination fee to cancel the use of certain strands under the dark fibre lease. Beginning in 2022, Hydro Ottawa will no longer lease dark fibre. This will yield annual IM&T operating cost savings of \$1.1M (please see section 2.6 for additional details). The one-time termination fee was removed from the 2021 budget. These two reductions explain the budget reduction in 2021.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 51 of 54

1 **3.11**. **METERING**

- 2 Metering program costs are comprised of the costs of operating and maintaining Hydro Ottawa's
- 3 meter fleet. Activities include, but are not limited to, testing and inspections, cross readings and
- 4 investigations, and field retrieval. Compensation is the main cost driver in the program.

5

- 6 Overall program costs have remained fairly stable. However, there were some temporary cost
- 7 reductions in 2018 and 2019 which were primarily driven by timing differences between
- 8 employee departures and replacements. None of the variances exceed the materiality
- 9 threshold. The overall CAGR of the Metering program over the 2016-2021 timeframe is 2.9%.

10

11 3.12. REGULATORY AFFAIRS

- 12 Included in Regulatory Affairs are compensation and benefits costs related to overseeing the
- 13 implementation of OEB-approved distribution rates and charges, preparation of distribution rate
- 14 applications, regulatory and compliance reporting, policy research and analysis, public policy
- 15 engagement, load forecasting, cost allocation, and rate design. In addition, OEB fees represent
- 16 approximately 50% of total program costs.

17

- 18 In 2021, there is an increase of \$0.7M. This is attributable, in part, to an increase in Regulatory
- 9 Memberships to reflect the actual costs of updated OEB cost assessments, as the
- 20 previously-used variance account will no longer apply during the 2021-2025 rate term (see
- 21 section 2.4 above). In addition, the preparation and adjudication costs associated with this
- 22 Application will start being expensed in 2021.

23

- 24 Overall, the CAGR for the Regulatory Affairs program over the 2016-2021 timeframe is
- 25 expected to be 8.1%.

26

27 3.13. SAFETY, ENVIRONMENT AND BUSINESS CONTINUITY

- 28 Included in the Safety, Environment and Business Continuity program are costs pertaining to
- 29 Distribution Environmental Programs and Flame Resistant Clothing for employees. Outside
- 30 services for environmental remediation make up approximately 30% of the annual budget.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 52 of 54

1 The program experienced large increases over the past few years, with a CAGR of 12.7%. This 2 was driven by the following:

3

5

6

7

8

9

10

11

12 13

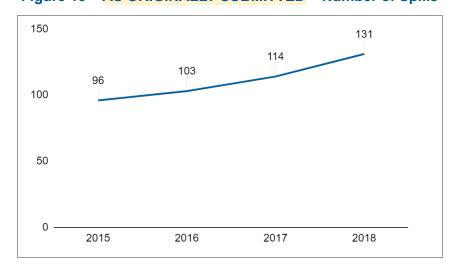

1415

16

- Increased environmental remediation costs due to proactive inspections of assets using infrared scanning. These inspections identify small spills/leaks before they cause greater impacts and potentially affect distribution system reliability. The number of events reported from 2015-2018 increased from 96 to 131. The associated cost increases of \$0.4M in 2018 and \$0.5M in 2019 are temporary increases and are expected to decrease in 2020 by \$0.8M when Hydro Ottawa's infrared scanning cycle is completed. After accounting for 2019 actuals, the associated cost increase for 2019 has been updated to \$0.6M. This is expected to decrease in 2020 by \$0.9M, when Hydro Ottawa's infrared scanning cycle is completed.
- Costs of approximately \$1.0M associated with the provision of Flame Resistant Clothing, as outlined in the collective agreement with the IBEW, were previously decentralized under other programs. In 2018, these costs were centralized and moved into this program in order to provide greater management oversight and control, and to assist with the administration of the online ordering system.

Figure 13 - AS ORIGINALLY SUBMITTED - Number of Spills

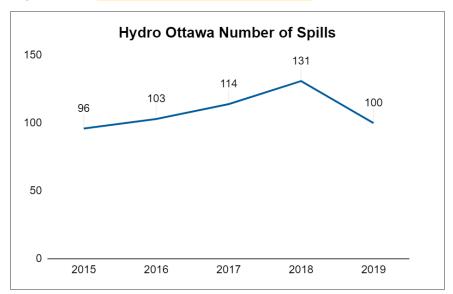

3

1

2

Figure 13 - UPDATED FOR 2019 ACTUALS - Number of Spills

6

5

7 3.14. SUPPLY CHAIN

- 8 Included in the Supply Chain program are costs pertaining to the delivery of procurement and
- 9 warehouse functions. This is achieved through the administration of procurement policies,

3

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 UPDATED May 5, 2020 Page 54 of 54

- 1 procurement of all products and services acquired by the utility, and management of the
- 2 inventory and equipment used to construct and maintain Hydro Ottawa's distribution assets.

4 Over the 2016-2021 period, CAGR for this program is expected to be 3.2%. There are no

5 variances above the materiality threshold.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 4 Attachment A UPDATED May 5, 2020 Page 1 of 1

UPDATED - Appendix 2-JB Recoverable OM&A Cost Driver Table^{1,3}

Notes:

- 1 For each year, a detailed explanation for each cost driver and associated amount is requied in Exhibit 4.
- 2 Opening Balance for "Last Rebasing Year" (cell B15) should be equal to the OEB-Approved amount. For purposes of assessing incremental cost drivers, the closing balance for each year becomes the opening balance for the next year.
- 3 If it has been more than four years since the applicant last filed a cost of service application, additional years of historical actuals should be incorporated into the table, as necessary, to go back to the last cost of service application. If the applicant last filed a cost of service application less than four years ago, a minimum of three years of actual information is required.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 **UPDATED** May 5, 2020 Page 1 of 5

UPDATED WORKFORCE STAFFING AND COMPENSATION

2

1

INTRODUCTION 3 1.

- This Schedule, in tandem with Attachments A through E, provides detailed information on Hydro
- Ottawa's strategies and approach to ensuring operational capacity and capability to safely and
- efficiently:

7

- 8 maintain and enhance the reliability of the electricity distribution system;
- 9 execute its comprehensive asset management plan and planned infrastructure renewal;
- 10 respond to increasing legislative and regulatory requirements;
- 11 address customer growth and nurture an evolving customer relationship;
- continue to manage the effects of its aging workforce; and 12
 - leverage technological advancements, and an ever-changing business landscape.

14

13

15 **2**. **WORKFORCE PLANNING AND STAFFING**

23 2020, will result in exactly 65 trades hires over this period.

16 In its 2016-2020 Custom Incentive Rate-Setting application, Hydro Ottawa outlined how it would attract and retain a highly skilled, properly trained, and knowledgeable workforce. More specifically, Hydro Ottawa reviewed the need to replenish its trades workforce and the proactive strategies it would employ to mitigate the ongoing risk of an insufficient talent pipeline. By leveraging workforce planning, integrated within its Talent Management Framework, Hydro Ottawa's workforce modeling forecasted that over the 2015-2020 period there would be a requirement for 65 trades hires.² The actual hiring from 2015-2019, alongside planned hiring for

- 25 As outlined in Attachment 4-1-5(B): Workforce Planning Strategy, as Hydro Ottawa moves from
- 26 2021 to 2025, its workforce planning is focused on sustaining rather than replenishing its trades

²⁷ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-Setting Distribution Rate Application*, EB-2015-0004 (April

<sup>28 29, 2015).
29 &</sup>lt;sup>2</sup> Workforce modeling is primarily used at Hydro Ottawa to forecast the supply of labour in relation to operational

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 UPDATED May 5, 2020 Page 2 of 5

workforce, replacing mid-level experienced front-line supervisors/managers and responding to the changing skill sets required in light of the technological innovations and digital transformation in the electricity sector.

4

Through its workforce modeling, Hydro Ottawa continues to identify gaps in its trades workforce for the 2021-2025 period. However, these projections are substantially less than those of the 2015-2020 period. This is, generally, as a result of demographics, access to contracted services, and a focus on more efficient and innovative ways of working. Of significance during this period will be the focus on replenishing the Hydro Ottawa people leader pipeline due to retirements, through succession planning, strategic external hiring, and leadership and management initiatives. Furthermore, during this time, the emphasis on the demand for new skill sets – and in some cases the creation of entirely new roles as a result of technological innovations and digital transformation – will require diverse responses in the form of training, hiring, and contracting for those skill sets.

15

To ensure that planned apprenticeship investments and hiring remain prudent, and to limit overall headcount increases within the organization from 2021-2025, Hydro Ottawa continues to base forecasted hiring on the following principles:

19 20

2122

2324

25

2627

28

- Increase overall productivity to ensure greater availability of productive time, while also
 establishing initiatives to gain efficiencies that increase the quality of the time worked;
- Hire apprentices and fill other positions by using vacancies as they become available, including the redistribution of vacancies from support functions to the trades;
- Where available in the labour market, attract and hire journeypersons to fill vacancies, with the aim of reducing the overall required training investment in apprenticeships and leverage qualified resources with a shorter lead time to achieve maximum productivity;
- Balance hiring with the appropriate use of overtime to supplement labour gaps, and continue to leverage contracted services where cost-effective and available to meet demand; and

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 1
Schedule 5
UPDATED
May 5, 2020
Page 3 of 5

• Increase the efficiency of work through innovative practices and the introduction of new technologies and automation.

234

1

3. MAINTAINING A SAFE WORK ENVIRONMENT

As outlined in Attachment 4-1-5(D): Health, Safety and Environment Compliance and Sustainability, Hydro Ottawa has adopted a best practice, continual improvement approach in relation to the following: (i) meeting legislative and regulatory requirements in the areas of health, safety, and environment; and (ii) maintaining standards of performance relative to risks associated with its ongoing business activities. Since 2008, Hydro Ottawa has successfully maintained registration of its integrated health, safety, and environmental management system to the International Organization for Standardization ("ISO") 14001 and the Occupational Health and Safety Assessment Series ("OHSAS") 18001. The Occupational Health, Safety and Environmental ("OHSE") management system has been updated to meet the requirements of the new ISO environmental standard in 2018, and preparations are underway to transition from the current OHSAS 18001 health and safety specifications to the new ISO 45001 health and safety standard in 2020.

17

With its younger workforce, as described in Attachment 4-1-5(B): Workforce Planning Strategy, Hydro Ottawa has increased the number of safety inspections, jobsite coaching, pre-construction meetings, and independent reviews of work in recent years, in order to mitigate safety risks.

22

Additionally, Hydro Ottawa ensures robust due diligence in relation to contractor safety and performance through a partnership with a contractor management firm, which carries out comprehensive and more cost-effective contractor pre-qualification and compliance monitoring.

26

27 4. COMPENSATION AND HEADCOUNT

28 Hydro Ottawa's compensation philosophy and associated compensation components are 29 premised on attracting and retaining a highly skilled workforce and on supporting a

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 1
Schedule 5
UPDATED
May 5, 2020
Page 4 of 5

performance-driven work culture. This is achieved by appropriately and fairly rewarding performance in the achievement of the objectives identified in the utility's Strategic Direction, and in accordance with position competencies and the organization's values, while at the same time controlling total compensation costs. More details on Hydro Ottawa's approach to total compensation – including salaries, incentive-based pay for senior employees only, insured benefit plans, pension plan, premiums and allowances – are outlined in UPDATED Attachment 4-1-5(A): Employee Compensation Strategy, as well as in Attachment 4-1-5(E): Actuarial Report regarding the utility's limited future benefit costs.

9

As provided in Attachment 1-1-12(G): Compensation Benchmarking Study, Hydro Ottawa engaged Mercer Canada to conduct a benchmarking study of its total compensation, including salaries, target total cash compensation, and benefit and pension contributions against both general and industry (utility) market comparators, where available. Jobs that are core to the operational business and key professional jobs were all found to be very well aligned with the market comparators. Some positions, generally unionized support roles, were found to be comparable to the utility market comparators although higher than the general industry market comparators.

18

The study also found that Hydro Ottawa's employer paid benefits, which include insurance and wellness benefits and pension contributions, are generally aligned with what is typically seen in the market – and more specifically, in the Ontario Public Sector.

22

Since 2016, Hydro Ottawa's total number of permanent full-time equivalents ("FTEs") has remained relatively static, with the same forecasted to 2021. Management permanent FTEs are decreasing and non-management permanent FTEs are slightly increasing. This has been realized while simultaneously replenishing and continuing to sustain the trades workforce, by using vacancies as they become available and focusing on productivity and efficiency and effectiveness of operations.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 1
Schedule 5
UPDATED
May 5, 2020
Page 5 of 5

- 1 Hydro Ottawa has been increasing its usage of a temporary workforce, which provides it with
- 2 more flexibility to address seasonal and other workloads, and can be more easily adjusted
- 3 upwards or downwards, as required. Hydro Ottaway's forecast to 2021 continues this approach,
- 4 allowing the utility to contain compensation costs.

5

6 As a result of prudently managing FTEs and compensation costs, Hydro Ottawa's actual and 7 forecasted annual average increase to total compensation is 2.8 % 2.5% from 2016-2021.

8

9 UPDATED Attachment 4-1-5(C): OEB Appendix 2-K - Employee Costs summarizes Hydro Ottawa's historical and forecasted FTEs and compensation costs, and indicates the following:

11 12

13

14

18

- Between 2016 and 2018, there was a decrease in FTEs. The 2019-2021 forecast shows an initial increase in the total number of FTEs between 2018 and 2019, and then a decrease in the total number of FTEs out to 2021; and
- The 2019 actuals confirm a smaller increase in the total number of FTEs between 2018 and 2019, with the updated forecast showing an increase for 2020, and then a decrease in the total number of FTEs in 2021; and
 - Total compensation costs are expected to increase on average by 2.5% per annum, from approximately \$67.4M \$68.4M in 2016 to \$77.6M in 2021.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 1 of 17

UPDATED EMPLOYEE COMPENSATION STRATEGY

2

1

3 1. INTRODUCTION

4 Hydro Ottawa's compensation philosophy and associated compensation components are 5 premised on attracting and retaining a highly skilled workforce and on supporting a 6 performance-driven work culture. This is achieved by appropriately and fairly rewarding 7 performance in the achievement of the objectives identified in the utility's Strategic Direction, 8 and in accordance with position competencies and the utility's values, while at the same time 9 controlling total compensation costs.

10

11 2. TOTAL COMPENSATION

Hydro Ottawa's approach to total compensation aligns with the utility's compensation philosophy and consists of the following major components which reinforce the total value proposition: salaries, incentive-based pay for senior employees only, insured benefit plans, pension plan, premiums, and allowances.

16

17 2.1. COMPENSATION BENCHMARKING STUDY

As provided in Attachment 1-1-12(G), Hydro Ottawa engaged Mercer Canada to conduct a benchmarking study of the utility's total compensation, including salaries, target total cash compensation, and benefit and pension contributions against both general and industry (utility) market comparators, where available. Competitiveness of salaries and target total cash compensation was defined as being within +/- 10% of P50 of each market comparator.¹

23

The study reviewed 15 jobs, including those core to the business, as well as technical, professional, and para-professional roles that support the business. The jobs included in the study are representative of both categories of positions/employees (management and non-management), which are further defined in section 3 below. Five management jobs and 10 non-management jobs at different levels of each category were reviewed.

. .

²⁹ ¹ "P50" refers to the market median job rate.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 2 of 17

- 1 The jobs that are core to the operational business (e.g. Manager, Distribution Operations;
- 2 Supervisor, Distribution Operations; Professional Engineer; and the trades jobs of Power Line
- 3 Technician and System Operator) were all found to be very well aligned with the utility market
- 4 comparators. In the case of the Professional Engineer job, there was also alignment with the
- 5 general industry market comparators.

7 Some jobs, generally unionized support roles, were found to be higher than the general industry

- 8 market comparators, but in most cases within +/-10% of P50 of the utility market comparators.
- 10 Key professional roles such as Senior Procurement Agents, Management Accountants, and
- 11 Network Administrators were also found to be very well aligned with both the utility and general
- 12 industry market comparators.

9

13

19

26

14 With respect to employer paid benefits, which include insurance and wellness benefits and

- 15 pension contributions, the study found that these offerings at Hydro Ottawa are generally
- aligned with what is typically seen in the market for non-executive employees. Specifically, when
- 17 compared to the Ontario Public Sector, where such benefits account for 20-22% of base salary,
- 18 Hydro Ottawa's benefits were found to be within 19-21% of base salary.

20 2.2. MERIT INCREASES

- 21 The salary structure for executive, management, and non-union employees consists of various
- 22 salary scales representing positions of similar scope and responsibility. A formalized point factor
- 23 system is in place to evaluate positions and determine the salary scale in which they are placed.
- 24 This ensures internal equity. Salary scales are reviewed every four years to ensure
- 25 competitiveness.
- 27 Employees are paid an annual salary within the salary scale based on education and
- 28 experience. Annual increases to salaries, within the salary scales, are merit-based and
- 29 determined by performance and contributions in the previous year. A robust performance

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 3 of 17

1 management system is in place for this purpose. An overall performance rating is established

2 and a merit increase associated with the rating is provided. Performance and contributions are

3 directly tied to Hydro Ottawa's corporate performance scorecard, ensuring that the focus of this

4 workforce segment is aligned to the advancement of the utility's Strategic Direction.

5

6 In determining the appropriate merit increase associated with each performance rating, Hydro

7 Ottawa reviews the national, provincial, and local salary projections of major compensation

8 consulting firms, including those projections for the utility and broader public sectors, as well as

9 consumer price indices.

10

11 2.3. INCENTIVE-BASED PAY

Since 2008, only senior management employees have been eligible for an annual incentive-based pay as a component of their total cash compensation, which is expressed as a percentage of annual salary. These employees have a direct line-of-sight to the success of the utility's Strategic Direction. On average, 39 employees are eligible for incentive-based pay in any given year. After accounting for 2019 actuals, the number of employees eligible for incentive-based pay in any given year has been updated to an average of 40.

18

19 Incentive-based pay is derived from the achievement of corporate, divisional, and individual

20 priorities in the previous year, both financial and non-financial, and qualitative and quantitative.

21 These priorities are established each year and approved by the Board of Directors.

22 Non-financial priorities are designed to achieve continuous improvement in relation to Hydro

3 Ottawa's Strategic Direction. They include a number of strategic objectives focused on customer

4 service, operational and organizational efficiency and effectiveness, and service reliability.

25

26 Table 1 below demonstrates the variability in this component of total cash compensation as it

27 relates to the achievement of priorities.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 4 of 17

4

2.4. COLLECTIVE AGREEMENT

5 The International Brotherhood of Electrical Workers ("IBEW"), Local 636 represents Hydro

7 Ottawa's unionized employees. This includes the company's trades, technical, clerical, and

8 administrative employees.

9

10 The current collective agreement is in effect from April 1, 2017 until March 31, 2021. The

11 collective agreement provides for negotiated wage increases and employee step progressions.

12 Negotiated wage increases are 2.0% for 2017, 2.10% for 2018, 2.10% for 2019, and 2.2% for

13 2020. The wage increases are on average 22% lower than the increases from the previous

14 four-year collective agreement. Nominal increases to certain premiums and allowances were

15 also negotiated, and spread-out over the collective agreement's four-year term.

16

17 A number of labour efficiencies were achieved during this most recent round of collective

B bargaining, with some directly and indirectly related to total compensation. These include the

19 expansion of normal hours of operation, reduction in hours of rest time when employees work

20 overnight, and a simplified process for the re-assignment of employees to a different work

21 location for training purposes.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 5 of 17

1 2.5. PENSION PLAN

Hydro Ottawa employees are part of the Ontario Municipal Employees Retirement System ("OMERS"), a multi-employer, contributory, defined-benefit pension plan established by the Province for employees of municipalities, local boards, and school boards in Ontario. Pension benefits are determined by a formula based on the highest consecutive five-year average of contributory earnings and years of service. Both participating employers and participating employees are required to make equal contributions to the plan based on the participating employees' contributory earnings.

9

Employers and employees that are members of the OMERS pension plan contribute a lesser percentage on earnings received up to the annual Yearly Maximum Pensionable Earnings ("YMPE"), and a higher percentage on earnings above the YMPE. The YMPE is equal to the Canada Pension Plan ("CPP") earnings limit, as the OMERS pension plan is designed to work together with the CPP to provide a stable retirement income.

15

16 Table 2 below summarizes Hydro Ottawa's historical and forecasted contribution rates to OMERS from 2016-2021.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 6 of 17

Table 2 – AS ORIGINALLY SUBMITTED – OMERS Contribution Rates (2016-2021)

2016 Historical	\$54,900	9.0%	14.6%
2017 Historical	\$55,300	9.0%	14.6%
2018 Historical	\$55,900	9.0%	14.6%
2019 Historical	\$57,400	9.0%	14.6%
2020 Bridge	\$60,100	9.0%	14.6%
2021 Test	\$60,900	9.0%	14.6%

1

5 In an effort to reduce the funding deficit after the 2008 global economic downturn, OMERS

6 contribution rates increased for both the employer and employee portions in 2012 and 2013.

7 Due to better returns in 2013, contribution rates remained unchanged from 2014-2019. OMERS

8 has recently confirmed that there will be no changes to the contribution rates for 2020. Hydro

9 Ottawa has also forecasted no change in contribution rates for 2021. By 2022, OMERS

10 contribution rates will have remained static for eight years.

11

12 For 2022 onwards, Hydro Ottawa, with the assistance of actuaries from Mercer Canada, has

13 forecasted a 0.65% contribution rate increase, both below and above the annual YMPE, for both

14 the employer and employee portions. This forecast is based on the OMERS Sponsors

15 Corporation's Funding Management Strategy and the plan's funded ratios, as of December 31,

16 2018.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 7 of 17

1 2.6. INSURED BENEFITS

- 2 Hydro Ottawa's insured benefit plans provide employees with income security and protection
- 3 from catastrophic and life events. Insured benefits coverage is provided to active full-time
- 4 employees in the following areas:

5

8

- Health, including vision care, prescription drugs, and paramedical services;
- Dental, including major dental and orthodontics services;
 - Long-term disability benefits;
- Short-term disability benefits; and
- 10 Life insurance.

11

- As part of the most recent round of collective bargaining in 2017, no changes were made to the provisions of the insured benefit plans for the four-year term of the collective agreement. As a result, all provisions of the insured benefit plans have remained static for all employee groups
- 15 during this time period.

16

17 Hydro Ottawa continues to benefit from its current cost containment measures such as 18 reasonable and customary limitations and generic substitution. Most recently, a drug risk 19 management program was introduced whereby new or existing drugs with new treatment 20 indications are reviewed by the benefit plan insurer to ensure appropriateness.

- 22 For 2020 onwards, Hydro Ottawa has forecasted increases in benefit costs by using the 2019
- 23 benefit costs as a base and applying assumptions regarding anticipated rate increases by
- 24 benefit. These assumptions are based on Mercer's 2019 Anticipated Benefit Costs report (dated
- 25 October 2018) and the expected salary increase as per the current collective agreement with
- 26 the IBEW.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 8 of 17

1 2.7. POST-RETIREMENT BENEFITS

2 Hydro Ottawa's post-retirement benefits consist of life insurance and a small retirement grant for

3 eligible employees primarily linked to positive attendance at work.

4

5 Hydro Ottawa completes a full actuarial valuation of the future value of the post-retirement

6 benefits every three years, which is consistent with industry standards. In the interim years, an

7 extrapolation is completed to determine if there has been a material change from the previous

8 year.

9

10 The most recent actuarial valuation was performed as at December 31, 2016, with an actuarial

11 extrapolation performed as at December 31, 2018 by Eckler Consultants & Actuaries.² The

12 valuation determined that the accrued post-retirement life insurance obligation decreased from

13 2017-2018, which is primarily attributable to an increase in the discount rate used in 2018. The

14 accrued retirement grant amount decreased from 2017-2018, which is attributable to the

15 retirement of employees in 2017 that were paid their retirement grant, thereby reducing the

16 utility's future obligations.

17

18 Hydro Ottawa has taken steps to contain its future benefit costs by limiting the type, scope, and

19 applicability of post-retirement benefits.

20

21 2.8. REGULATORY TREATMENT OF PENSION AND OTHER POST-EMPLOYMENT

22 **BENEFITS**

On September 14, 2017, the OEB issued its final report on the regulatory treatment of pension

24 and other post-employment benefit ("OPEB") costs establishing the use of accrual accounting

25 as the default method on which to set rates for pension and other post-employment benefit

26 amounts in cost-based applications.3 Moreover, this report also provides for the establishment of

27 a variance account to track the difference between the forecasted accrual amount in rates and

²⁸ Please see Attachment 4-1-5(E): Actuarial Report.

²⁹ Ontario Energy Board, Report of the Board: Regulatory Treatment of Pension and Other Post-Employment Benefits

^{30 (}OPEBs) Costs, EB-2015-0040 (September 14, 2007).

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 9 of 17

1 actual cash payment(s) made, with an asymmetric carrying charge in favour of ratepayers

2 applied to the differential.

3

4 Hydro Ottawa provides pension benefits for its employees through the OMERS Fund (the

5 "Fund"). Although the plan is a defined benefit plan, sufficient information is not available to

6 Hydro Ottawa to account for it as such because it is not possible to attribute the fund assets and

7 liabilities between the various employers who contribute to the Fund. As a result, Hydro Ottawa

8 accounts for the plan as a defined contribution plan, and contributions payable as a result of

employee service are expensed as incurred similar to short-term employee benefits.

10

1 Hydro Ottawa also provides other post-employment benefits such as life insurance and a

2 retirement grant. These plans provide benefits to certain employees when they are no longer

providing active service. Other post-employment benefits are recorded on an accrual basis. The

4 accrued benefit obligation and current service costs are calculated using the projected benefit

5 method prorated on service and based on assumptions that reflect Hydro Ottawa's best

6 estimates. Hydro Ottawa tracks the difference between the forecast accrual amount in rates and

17 actual cash payments in a variance account as set out in the OEB report.

18

19 Table 3 below outlines Hydro Ottawa's 2016-2021 Pension and OPEB amounts.

4

5 3. **HEADCOUNT**

- 6 Hydro Ottawa has categorized employees/positions into two groups in calculating the total
- 7 full-time equivalents ("FTE"). These groups are comprised of full-time permanent equivalents
- 8 and temporary equivalents (which can be full-time or part-time), defined as follows:⁸

 ⁴ As noted above, pension contributions are expensed as incurred. With respect to the pension cost that is
 capitalized, this along with other employee benefits as described in this Schedule, are included on the capitalized
 labour line in UPDATED Attachment 2-4-5(A): OEB Appendix 2-D - Overhead Expense. Hydro Ottawa uses a
 blended labour rate and burden rates to do this allocation and therefore does not track each type of
 compensation-related expense charged to capital separately. The other capitalized OM&A amounts (Supply Chain,
 Supervisor, Engineering and Fleet) also include compensation, and as such, pension costs are also included on
 these lines.

⁵ As described above, Hydro Ottawa's other post-employment benefits are limited to life insurance and a retirement grant. The amount shown in Table 3 is the expense amount included in OM&A. Note that these costs are not included in the capitalized OM&A amounts discussed above, and therefore none of these amounts are capitalized. Although, not considering post-retirement, the non-vested sick leave as described in UPDATED Exhibit 4-1-4: Operations,

not considering post-retirement, the non-vested sick leave as described in UPDATED Exhibit 4-1-4: Operations,
 Maintenance and Administration Cost Drivers and Program Variance Analysis is also grouped in this analysis.

^{21 6} This represents the cash payments for other post-employment benefits as included on Hydro Ottawa's tax returns.

²² ⁷ Footnotes 4-6 likewise apply as descriptions for this updated version of the table.

Summer students and co-op students are not included, as these short-term hires are viewed as developmental in nature.

- Management includes executives, directors, managers, supervisors, and senior professionals such as professional engineers.
 - Non-Management includes non-unionized professionals, such as engineers-in-training and executive assistants, and all employees who are represented by the IBEW.

5

1

3

4

The tables below summarize Hydro Ottawa's actual FTEs for 2016, 2017, 2018, along with the forecasted FTEs for 2019, 2020 and 2021. Hydro Ottawa's FTE count is determined using standard methodology. For the 2016-2018 actuals, FTE is a calculated value derived from the total regular hours paid each year divided by the regular hours of work scheduled each year by a single employee in that group. For the 2019-2021 forecasts, FTE is calculated as all budgeted positions, adjusted for part-year budgeting for new positions. These tables have been revised due to a systemic error in spreadsheet templates which affected 2016, 2017, and 2018 actual FTE, Temporary Equivalents, and Compensation amounts.

14

After accounting for 2019 actuals, the updated versions of the tables below summarize Hydro Ottawa's actual FTEs for 2016, 2017, 2018, and 2019, along with the forecasted FTEs for 2020 and 2021. For the 2016-2019 actuals, FTE is a calculated value derived from the total regular hours paid each year divided by the regular hours of work scheduled each year by a single employee in that group. For the 2020-2021 forecasts, FTE is calculated as all budgeted positions, adjusted for part-year budgeting for new positions.

21

22 3.1. FULL-TIME PERMANENT EQUIVALENTS

23 Table 4 below illustrates Hydro Ottawa's forecasted plan to stabilize its total number of 24 permanent full-time employees/positions.

TOTAL	587.3	586.7	579.8	582.0	585.6	587.2

Since 2016, Hydro Ottawa's total number of permanent FTEs has remained relatively static with the same forecasted to 2021. Management permanent FTEs are decreasing and non-management permanent FTEs are slightly increasing. This has been realized while at the same time replenishing and continuing to sustain the trades workforce in accordance with Hydro Ottawa's Workforce Planning Strategy (which is appended to this Application as Attachment 4-1-5(B)). This has entailed using vacancies as they become available and focusing on productivity and efficiency and effectiveness of operations.

The slight increase in management FTEs reflected in the 2019 actuals is attributed to the filling of vacant positions, while Non-Management FTEs remained the same.

Page 15 of 17

- 1 the total number of FTEs between 2018 and 2019, attributable mainly to an increase in the
- 2 usage of temporary employees as well as a slight increase in permanent non-management
- 3 FTEs. The total number of FTEs then decreases out to 2021.

4

- The 2019 actuals confirm a smaller increase in the total number of FTEs over 2018. An increase
- 6 in the total number of FTEs is forecasted for 2020 due mainly to increases in non-management
- 7 and temporary FTEs, with a subsequent decrease forecasted for 2021.

8

9 4. TOTAL COMPENSATION

- 10 Table 7 below summarizes Hydro Ottawa's historical and forecasted total compensation
- 11 including salary, wages, and benefits from 2016-2021. Hydro Ottawa's approach to prudently
- 12 managing FTEs and compensation costs, as outlined throughout this Attachment, has resulted
- 13 in an actual and forecasted annual average increase to total compensation of 2.8% 2.5% from
- 14 2016-2021.

- 16 The original version of Table 7 has been revised due to a systemic error in spreadsheet
- templates. In addition, Table 7 has been updated to account for 2019 actuals.

8 4.1. 2016-2018 ACTUALS

- 9 The total compensation increase from 2016-2018 is largely due to step increases and annual
- 10 negotiated salary increases for unionized employees and annual merit increases for non-union
- 11 employees. It is also attributable to an increase in overtime costs in 2018, in connection with

 ⁹ Hydro Ottawa has completed UPDATED OEB Appendix 2-K - Employee Costs, which is included in this Application
 as Attachment 4-1-5(C). This footnote likewise applies to the revised and updated versions of Table 7.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 1 Schedule 5 Attachment A UPDATED May 5, 2020 Page 17 of 17

restoration activities following an ice storm in April, a wind storm in May, and tornadoes, high winds, and thunderstorms in September – all of which caused significant damage to the electricity grid. As noted in Table 4 above, given the decrease in management FTEs during this period, compensation for that group also decreased.

5

6 4.2. 2019-2021 FORECAST

Hydro Ottawa's total compensation forecast for 2019-2021 shows an average annual increase of 2.8% 2.5% over the three-year period. This trending is primarily based on the step increases and annual negotiated salary increases for unionized employees, together with the annual merit increase for management and non-union employees, as well as the forecasted increase in benefit costs. Total compensation costs have additionally been contained by the forecast of an overall flat number of permanent FTEs to 2021, supplemented by temporary FTEs, as required.

13

Actual total compensation for 2019 over 2018 remained relatively flat, showing a slight decrease. This is attributed to both a significant decrease in overtime and the ongoing use of a temporary workforce.

^{*} As outlined in UPDATED Attachment 4-1-5(A) - Employee Compensation Strategy, revisions have been made to 2016, 2017 and 2018 actuals due to a systemic error in spreadsheet templates.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 2 Schedule 4 UPDATED May 5, 2020 Page 1 of 3

UPDATED REGULATORY COSTS

2

1

Regulatory costs for Hydro Ottawa are included in the Uniform System of Accounts ("USofA")
4 5655, Regulatory Expenses and 5630, Outside Services Employed.¹ A summary of Regulatory
5 Expenses are shown in Table 1, as updated below. Please refer to UPDATED Attachment
6 4-2-4(A): Appendix 2-M - Regulatory Cost Schedule for further details.² Regulatory costs include
7 OEB cost assessments and licence fees, intervenor and other cost awards, professional

8 services (legal and consulting), and costs to publish public notices.

15 consultations that are set to impact Hydro Ottawa.

9

Regulatory costs are split between one-time and on-going costs. In light of the increases in total Regulatory Costs which Hydro Ottawa has seen, the budget for the 2021 Test Year is \$2.3M. The main driver of the increase in on-going costs relates to the annual assessment fees paid to the OEB. Additionally, consulting costs in 2020 and 2021 are forecasted to be higher than 2019, due to external expertise that will be sought on government, OEB, and industry policy

16

17 In 2016, the OEB revised its cost assessment model.³ As part of this change, the OEB established a variance account, Account 1508 Other Regulatory Assets, Sub-account OEB Cost 19 Assessment Variance, to capture the difference between the costs incurred as a result of the 20 new methodology and the costs which had already been built into a utility's rates. The variance 21 account was to be utilized until a utility's utility's rates were next rebased/reset.⁴

22

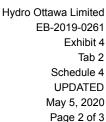

These revisions to the OEB's cost assessment model substantially increased Hydro Ottawa's allocation of the OEB's costs. For the OEB's April 2016 - March 2017 fiscal year, the OEB's cost allocation to the utility was \$1.4M, which represented an increase of 56% over the \$916K projection included in Hydro Ottawa's 2016 rebasing application.

²⁷ Prior to 2019, OEB Section 30 Costs were included in Account 5620, Office Supplies and Expense.

²⁸ Hydro Ottawa has made an adjustment to the Appendix to include a column for 2017 actuals.

Ontario Energy Board, Letter re: Revisions to the Ontario Energy Board Cost Assessment Model (February 9, 30 2016).

^{31 4} *Ibid*, page 2.

1 As a result, for purposes of this Application, the OEB Cost Assessment appears as an increase

2 in the 2021 Test Year. For additional information on the OEB Cost Assessment Variance

3 Account, please refer to **UPDATED** Exhibit 9-1-3: Group 2 Accounts.

4

5 Hydro Ottawa did not request one-time costs as part of its 2016-2020 Custom Incentive

6 Rate-Setting application.⁵ Accordingly, the one-fifth amortized portion of the \$0.5M one-time

7 costs included in the 2021 Test Year are incremental. The one-time costs include external

8 studies on core areas or topics that were commissioned to support, and in some cases guide,

9 Hydro Ottawa's Business Plan and requested revenue requirement. 6 Additionally, the one-time

10 costs include OEB hearing costs, intervenor costs, and legal costs set to be incurred in the

11 adjudication of this Application. Please refer to Exhibit 4-2-3: One-Time Costs for details related

12 to the amortized period.

13

4 The costs associated with the time spent by Hydro Ottawa's regulatory employees in preparing

5 this Application have not been included in USofA Accounts 5655, 5630, or 5620. These costs

6 are contained within the general operations, maintenance and administration budgets. The

7 costs associated with the time spent in preparing this Application by personnel from other

18 business units within the utility (such as finance, distribution asset management, treasury,

19 human resources, customer service, information technology, etc.) are likewise not included in

20 Accounts 5655 or 5630. Instead, these costs are contained within the respective budgets of

21 those business units.

,

⁵ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-Setting Distribution Rate Application*, EB-2015-0004 (April 29, 2015).

^{24 &}lt;sup>6</sup> The external studies commissioned in support of this Application are listed in UPDATED Exhibit 1-1-1: Table of

²⁵ Contents.

UPDATED DEPRECIATION, AMORTIZATION, DISPOSAL

2

1

3 1. INTRODUCTION

- 4 In accordance with section 2.4.4 of the Chapter 2 Filing Requirements for Electricity Distribution
- 5 Rate Applications, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing
- 6 Requirements"), this Schedule seeks to demonstrate that Hydro Ottawa's proposed levels of
- 7 depreciation and amortization expenses appropriately reflect the useful lives of the utility's
- 8 assets and the OEB's accounting policies.

9

10 2. ANNUAL DEPRECIATION AND AMORTIZATION

- 11 In Tables 1 and 2 below, Hydro Ottawa provides details for depreciation by asset group for the
- 12 Historical Years 2016-2018, Bridge Years 2019-2020, and 2021-2025 Test Years. Both tables
- have been updated to account for 2019 actuals for the Historical Years 2016-2019, Bridge Year
- 14 2020, and Test Years 2021-2025.

10 3. DISPOSITIONS BY ASSET GROUP

- 11 In Tables 3 and 4 below, Hydro Ottawa provides details of amortization related to disposals by
- 12 asset group for the Historical Years (2016-2018), Bridge Years (2019 and 2020), and Test Years
- 13 (2021-2025).

- 15 Table 3 has been updated to account for 2019 actuals, such that it provides details of
- amortization related to disposals by asset group for the Historical Years (2016-2019) and Bridge
- 17 Year (2020).

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 12 of 15

1 The useful lives of Hydro Ottawa's assets and components have been determined based on

- 2 experience, professional judgement, failure data, and local conditions. Some useful lives differ
- 3 when compared to the useful life range noted in the Kinectrics Report.9 However, the useful
- 4 lives of Hydro Ottawa's assets have been approved in previous rate applications. The utility has
- 5 therefore continued to depreciate its fixed assets using the same methodology and useful lives
- 6 as in prior years.

7

8 For further details on the useful lives of Hydro Ottawa's assets, please reference Attachment

9 4-3-1(A): OEB Appendix 2-BB - Service Life Comparison.

10

11 As indicated in Exhibit 2-4-4: Capitalization Policy, Hydro Ottawa is requesting to change the

- 12 useful life of laptops from five years to four years. The useful life for Computer Equipment
- 13 (Hardware) contained in the Kinectrics Report is three to five years.

14

- 15 Hydro Ottawa is also requesting to extend the useful life of some transportation equipment.
- 16 Please refer to Attachment 2-4-3(F): Fleet Replacement Program for further details.

17

- 18 There are variances between the depreciation and amortization calculated using the formulas in
- 19 the annual UPDATED Appendix 2-C10 and those presented in the annual UPDATED Appendix
- 20 2-BA.¹¹ Hydro Ottawa uses the half-year rule for calculating depreciation/amortization in the year
- 21 that capital additions are added to the rate base, for both actual and budgeted pooled assets.
- 22 However, in the case of discrete material assets (e.g. a station, major investment in IT assets,
- 23 and so forth), the actual or forecasted in-service month would be used to calculate the
- 24 depreciation/amortization. This is consistent with Hydro Ottawa's historical practices for these
- 25 types of assets, for both rate application and financial reporting purposes.

Attachments 4-3-1(E)-(K), respectively.

The OEB's Appendix 2-BA for the years 2016-2025 can be found in Attachments 2-2-1(A)-(J), respectively.

³¹ Appendix 2-BA for the years 2019-2025 has been updated to account for 2019 actuals, and can be found in

³² UPDATED Attachments 2-2-1(D)-(J), respectively.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 3 Schedule 1 UPDATED May 5, 2020 Page 13 of 15

- 1 Hydro Ottawa uses its financial system to calculate depreciation and amortization expense on
- 2 assets that are already in service, and uses a depreciation forecast model to calculate
- 3 depreciation and amortization on budgeted capital additions. Both the financial system and
- 4 forecast model incorporate actual in-service dates of discrete material assets in the calculation.
- 5 Hydro Ottawa proposes to continue this method of calculating depreciation for the 2021-2025
- 6 period.

7

5. NET GAIN/LOSS ON DISPOSITION

- 9 In Hydro Ottawa's last rebasing application, 12 the OEB approved the establishment of USofA
- 10 4362 Loss from Retirement of Utility and Other Property to record the difference between the
- 11 forecast and actual loss on the disposal of fixed assets related to retirement of assets or
- 12 damages to plant. Table 7 below provides the balance in USofA 4362 for the Historical Years
- 13 (2016-2018) and Bridge Years (2019 and 2020). The table has been updated to provide the
- balance in USofA 4362 for the Historical Years (2016-2019) and Bridge Year (2020).

7 The 2019 forecast net gain in Table 7 does not include the net gain on the sale of the Albion

land and building, nor the net gain on the sale of the Merivale land and building. Similarly, the

net gain in the updated version of Table 7 that accounts for 2019 actuals does not include the

0 net gain on the sale of the Albion or the Merivale lands and buildings. As per the Approved

11 Settlement Agreement governing Hydro Ottawa's 2016-2020 rate term, the utility is recording

12 the net gain from the sale of these facilities in a separate regulatory account (Gains/Losses from

3 Sale of Existing Facilities Deferral account), which captures 100% of the after tax net gain/loss

14 on the sale of the facilities.

16 In UPDATED Exhibit 9-1-3: Group 2 Accounts, Hydro Ottawa is seeking the continuance of the

17 net gain/loss on fixed assets variance account. Table 8 below provides the annual forecast

18 amounts for the 2021-2025 Test Years.

¹⁹ This refers to USofA 1508 Sub-Account Gains and Loss on Disposal of Fixed Assets Variance Account.

²⁰ ¹⁴ Totals may not sum due to rounding.

²¹ This refers to USofA 1508 Sub-Account Gains and Loss on Disposal of Fixed Assets Variance Account.

²² ¹⁶ Totals may not sum due to rounding.

4 6. ASSET RETIREMENT OBLIGATION

5 According to the International Financial Reporting Standards and Article 410 of the OEB's

6 Accounting Procedures Handbook, an entity is required to recognize a liability related to the

7 retirement of certain fixed assets typically as a result of environmental laws or regulations. This

8 obligation - referred to as an asset retirement obligation ("ARO") - is measured at the present

9 value of future decommissioning, restoration, or similar cost.

10

11 Hydro Ottawa maintains an ARO related to the disposal and removal cost of Polychlorinated

2 Biphenyls in its distribution equipment. The amount of the obligation and related depreciation

13 expense in Historical and Bridge Years are shown in Table 9.

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- 1 This is the net book value of assets that existed as at the date of the utility's change in depreciation policies (i.e. as at Jan. 1, 2012 or Jan. 1, 2013). These assets are to be depreciated at the average remaining service life. This amount will not change in years subsequent to the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year plus the prior year's additions.
- A recalculation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years less 3 years) pas at January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of the opening balance of Asset A is 6 determined to be 27 years (20 years lies s3 years) under the revised CGAAP, except a life of the opening balance of Asset A is 6 determined to be 27 years (20 years lies s3 years) under the revised CGAAP.
- 4 The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report. OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- 6 The applicant must provide an explanation of material variances in evidence.
- 7 This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change
- 8 This should include assets in column D (excel column F) that have become fully depreciated. The amount input in e (excel column G) should equal the gross book value of the asset

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- This is the net book value of assets that existed as at the date of the utility's change in depreciation policies (i.e. as at Jan. 1, 2012 or Jan. 1, 2013). These assets are to be depreciated at the average remaining service life. This amount will not change in years subsequent to the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- 2 This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- A recalculation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years less 5 years) as at January 1 of the year of policy changes. Therefore, the average remaining useful life of the opening balance of Asset A is determined to be 27 years (20 years less 3 years) under the revised coarse. The policy changes is a service of the policy changes of the policy changes. Therefore, the average remaining useful life of the opening balance of Asset A is now 30 years. Therefore, the average remaining useful life of the opening balance of Asset A is a discussion of the policy changes.
- 4 The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- 5 OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application
- 6 The applicant must provide an explanation of material variances in evidence.
- 7 This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change
- 8 This should include assets in column D (excel column F) that have become fully depreciated. The amount input in e (excel column G) should equal the gross book value of the asset

This appendix is to be completed in conjunction with the accounting instructions in Appendix 2-B

Scenario that applies	Applicable Years and Accounting Standard	Year Reflected in Schedule Below	Accounting Standard Reflected in Schedule
Rebasing for the first time with depreciation policy changes made in 2012.	This appendix must be duplicated and completed for the years 2012 to 2021. The appendix for 2012 is to be completed under CGAAP (prior to changes in depreciation policies). The appendix for 2012 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Rebasing for the first time with depreciation policy changes made in 2013.	This appendix must be duplicated and completed for the years 2013 to 2021. The appendix for 2013 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2013 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased with depreciation policy changes in a prior rate application and rebasing MIFRS for the first time.	This appendix must be completed for 2014 to 2021. The appendix for 2014 is to be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased under MIFRS in a prior rate application	This appendix must be completed under MIFRS for each year for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.	2021	MIFRS

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- This is the net book value of assets that existed as at the date of the utility's change in depreciation policies (i.e. as at Jan. 1, 2012 or Jan. 1, 2013). These assets are to be depreciated at the average remaining service life. This amount will not change in years subsequent to the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- A reactulation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years lies 3 years) as at January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of 6 penetring balance of Asset A is 27 years (30 years lies 32 years) under 10 years of policy changes.
- 4 The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- The applicant must provide an explanation of material variances in evidence.
- This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change
- 8 This should include assets in column D (excel column F) that have become fully depreciated. The amount input in e (excel column G) should equal the gross book value of the asset

This appendix is to be completed in conjunction with the accounting instructions in Appendix 2-B

Scenario that applies	Applicable Years and Accounting Standard	Year Reflected in Schedule Below	Accounting Standard Reflected in Schedule
Rebasing for the first time with depreciation policy changes made in 2012.	This appendix must be duplicated and completed for the years 2012 to 2021. The appendix for 2012 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2012 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Rebasing for the first time with depreciation policy changes made in 2013.	This appendix must be duplicated and completed for the years 2013 to 2021. The appendix for 2013 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2013 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2013 to 2014 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased with depreciation policy changes in a prior rate application and rebasing MIFRS for the first time.	This appendix must be completed for 2014 to 2021. The appendix for 2014 is to be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased under MIFRS in a prior rate application	This appendix must be completed under MIFRS for each year for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.	2022	MIFRS

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- This is the net book value of assets that existed as at the date of the utility's change in depreciation policies (i.e. as at Jan. 1, 2012 or Jan. 1, 2013). These assets are to be depreciated at the average remaining service life. This amount will not change in years subsequent to the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- 2 This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- A reactulation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years lies 3 years) as at January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of 6 penetring balance of Asset A is 27 years (30 years lies 32 years) under 10 years of policy changes.
- 4 The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- 6 The applicant must provide an explanation of material variances in evidence.
- 7 This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change
- 8 This should include assets in column D (excel column F) that have become fully depreciated. The amount input in e (excel column G) should equal the gross book value of the asset

UPDATED - Appendix 2-C Depreciation and Amortization Expense

This appendix is to be completed in conjunction with the accounting instructions in Appendix 2-B

Scenario that applies	Applicable Years and Accounting Standard	Year Reflected	Accounting Standard Reflected in Schedule
Rebasing for the first time with depreciation policy changes made in 2012.	This appendix must be duplicated and completed for the years 2012 to 2021. The appendix for 2012 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2012 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Rebasing for the first time with depreciation policy changes made in 2013.	This appendix must be duplicated and completed for the years 2013 to 2021. The appendix for 2013 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2013 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased with depreciation policy changes in a prior rate application and rebasing MIFRS for the first time.	This appendix must be completed for 2014 to 2021. The appendix for 2014 is to be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased under MIFRS in a prior rate application	This appendix must be completed under MIFRS for each year for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.		MIFRS

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- 1 This is the net book value of assets that existed as at the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- 2 This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- A recalculation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years less sees) as at January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of the opening balance of Asset A is of externing to be 2 years (30 years less 3 years) under the revised capacity of the year of policy changes.
- The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- 5 OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- The applicant must provide an explanation of material variances in evidence.
- This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- This is the net book value of assets that existed as at the date of the utility's change in depreciation policies (i.e. as at Jan. 1, 2012 or Jan. 1, 2013). These assets are to be depreciated at the average remaining service life. This amount will not change in years subsequent to the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- 2 This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- 3 A recalculation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years is as 4 January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of the opening balance of Asset A is determined to be 27 years (30 years less 3 years) under the revised Open and a support of the year of policy changes.
- 4 The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- 6 The applicant must provide an explanation of material variances in evidence.
- 7 This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change
- This should include assets in column D (excel column F) that have become fully depreciated. The amount input in e (excel column G) should equal the gross book value of the asset

UPDATED - Appendix 2-C Depreciation and Amortization Expense

This appendix is to be completed in conjunction with the accounting instructions in Appendix 2-B

Scenario that applies	Applicable Years and Accounting Standard	Year Reflected in Schedule Below	Accounting Standard Reflected in Schedule
Rebasing for the first time with depreciation policy changes made in 2012.	This appendix must be duplicated and completed for the years 2012 to 2021. The appendix for 2012 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2012 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Rebasing for the first time with depreciation policy changes made in 2013.	This appendix must be duplicated and completed for the years 2013 to 2021. The appendix for 2013 is to be completed under CGAAP (after changes in depreciation policies). The appendix for 2013 to 2014 must be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased with depreciation policy changes in a prior rate application and rebasing MIFRS for the first time.	This appendix must be completed for 2014 to 2021. The appendix for 2014 is to be completed under Revised CGAAP (after changes in depreciation policies). The appendix for 2014 to 2021 is to be completed under MIFRS (2014 if changes to MIFRS are material).		
Already rebased under MIFRS in a prior rate application	This appendix must be completed under MIFRS for each year for the earlier of: 1) all historical years back to its last rebasing; or 2) at least three years of historical actuals, in addition to Bridge Year and Test Year forecasts.		MIFRS

General: Applicants are to complete this appendix to show the reasonability of the depreciation expense that is included in rate base via. Accumulated depreciation and the revenue requirement.

Applicants must provide a breakdown of depreciation and amortization expense in the above format for all relevant accounts. Balances presented in the table should exclude asset retirement obligations (AROs) and the related depreciation and accretion expense. These should be disclosed separately consistent with the Notes of historical Audited Financial

- 1 This is the net book value of assets that existed as at the date of the utility's change in depreciation policies. This column is expected to be used until the assets that existed as at the date of the utility's change in depreciation policies are fully depreciated.
- 2 This is the opening gross book value of assets that have been acquired after the date of the utility's change in depreciation policies (i.e. additions starting in 2012/2013 for those who changed policies Jan. 1, 2012/2013). These assets are to be depreciated at the revised service life. The amount is expected to be equal to the opening gross book value of the prior year's additions.
- A recalculation should be performed to determine the average remaining life of opening balance of assets (i.e. excluding current year's additions) under the change in policies under CGAAP. For example, Asset A had a useful life of 20 years under CGAAP without the change in policies. On January 1 of the year of policy changes, Asset A was 3 years depreciated. As a result, Asset A would have a remaining service life of 17 years (20 years less 3 years) as at January 1 of the year of policy changes. Due to making the change in policies under CGAAP, management re-assessed the asset useful lives and concluded that the revised useful life of Asset A is now 30 years. Therefore, the average remaining useful life of the opening balance of Asset A is determined to be 27 years (30 years less 3 years) as at January 1 of the year of policy changes.
- The useful life used should be consistent with the OEB's regulatory accounting policies as set out in the Accounting Procedures Handbook for Electricity Distributors, effective Jan. 1, 2012 and also with the Report of the Board, Transition to International Financial Reporting Standards, EB-2008-0408, and the Kinectrics Report.
- 5 OEB policy of the "half-year" rule the applicant must ensure that additions in the year attract a half-year depreciation expense in the first year. Deviations from this standard practice must be supported in the application.
- The applicant must provide an explanation of material variances in evidence.
- This should include assets in column A (excel column C) that become fully depreciated since the date of the policy change. The amount input in b (excel column D) should equal the net book value of the asset as at the date of depreciation policy change

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 1 of 11

UPDATED PAYMENTS IN LIEU OF TAXES

2

1

3 1. INTRODUCTION

- 4 Hydro Ottawa is required to make Payments in Lieu of Taxes ("PILS") to the Ministry of Finance
- 5 based on its taxable income. Hydro Ottawa has used the Income Tax/PILS Workform (the "PILS
- 6 Tax Model") supplied by the OEB for 2020 Cost of Service Applications Filers to calculate the
- 7 PILS for each of the 2021-2025 Test Years.

8

- 9 The amount of PILS included in the revenue requirements for each of the 2021-2025 Test Years
- 10 is summarized in Table 1, as updated below. The OEB Income Tax/PILS Workforms for the
- 11 2021-2025 Test Years are appended to this Schedule as the following UPDATED Attachments:

12

- UPDATED Attachment 4-4-1(D): OEB Workform 2021 Income Tax/PILS Workform
- UPDATED Attachment 4-4-1(E): OEB Workform 2022 Income Tax/PILS Workform
- UPDATED Attachment 4-4-1(F): OEB Workform 2023 Income Tax/PILS Workform
- **UPDATED** Attachment 4-4-1(G): OEB Workform 2024 Income Tax/PILS Workform
- UPDATED Attachment 4-4-1(H): OEB Workform 2024 Income Tax/PILS Workform

2

Table 1 – UPDATED FOR 2019 ACTUALS – Corporate PILS for Test Years 2021-2025 (\$'000s)

Test Year	Income Taxes/PILS Grossed Up
2021	\$2,224
2022	\$3,881
2023	\$8,604
2024	\$11,533
2025	\$7,590

7

8 No modifications have been made to the PILS Tax Models, with the exception of the following:

9

 Capital Cost Allowance ("CCA") has been calculated using the new Accelerated Investment Incentive rules ("accelerated CCA") for all Test Years 2021-2025. (See section 6 below for more details on the new rules).

1314

15

16

1112

However, for Tab T8 "Sch 8 CCA Test," the limitation of those schedules in Tab 8 required that the accelerated CCA be adjusted manually for Test Years 2024 and 2025 only. Hydro Ottawa has included supplemental Schedule 8 worksheets for Test Years

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 3 of 11

2024 and 2025 to support the CCA calculations in the PILS Tax Models (please see UPDATED Attachment 4-4-1(I): 2024 Schedule 8 Capital Cost Allowance and UPDATED Attachment 4-4-1(J): 2025 Schedule 8 Capital Cost Allowance.

4

5 2. PRUDENT MANAGEMENT OF PILS/TAXES

6 Hydro Ottawa exercises sound tax planning and manages its tax costs diligently in order to 7 minimize these costs. As required, the utility maximizes tax deductions and takes advantage of 8 available tax credits, such as apprentice tax credits, student co-op tax credits, and scientific 9 research and experimental development ("SR&ED") tax credits.

10

11 3. GENERAL METHODOLOGY

The methodology for calculating PILS is consistent with the principles set out in the *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019. It is also consistent with the methodology employed in prior years. In addition, PILS calculations reflect applicable current tax legislation and regulatory changes, including the recent legislative tax changes to CCA in Bill C-97, which are further discussed in section 6 below.

18

For Test Years 2021-2025, Hydro Ottawa has used a combined income tax rate of 26.5%, which is comprised of a federal tax rate of 15.0% and a provincial tax rate of 11.5%. This rate is applied to Hydro Ottawa's regulatory taxable income determined through the PILS Tax Models to calculate income taxes payable before the deduction of tax credits. Applicable tax credits are then deducted to determine the Corporate PILS/Income Tax Provision for the given Test Year. This amount is then grossed up by the 1 - tax rate formula to determine the PILS component of the revenue requirement for each Test Year.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 4 of 11

1 4. LOSS CARRY-FORWARDS

2 Hydro Ottawa does not have any non-capital loss or capital loss carry-forwards as at the end of

3 December 2018. Furthermore, the utility has not forecast any loss carry-forwards for the

4 2021-2025 Test Years.

5

6 5. NON-DISTRIBUTION ASSETS/NON-RECOVERABLE EXPENSES

7 Hydro Ottawa has excluded any non-distribution assets in its PILS Tax Models. The utility also

8 confirms that non-recoverable expenses and expenses disallowed for regulatory purposes have

9 been excluded in the tax calculation.

10

11 6. CAPITAL COST ALLOWANCE

On June 21, 2019, Bill C-97 received Royal Assent. Bill C-97, the *Budget Implementation Act*, 2019, introduced changes to CCA, such as the new accelerated CCA rules. These rules allow enhanced first-year tax depreciation on eligible capital assets acquired and available for use after November 20, 2018. Under the accelerated CCA rules, Hydro Ottawa is able to deduct up to three times the amount of tax depreciation that would otherwise be available in the year that an asset is acquired and available for use. This is achieved by removing the "half-year" rule and then applying the prescribed CCA rate at 1.5 times on the net qualifying additions for the given year. This accelerated CCA is available for assets acquired and available for use after November 20, 2018 and before 2024.

21

A phase-out period will begin for property that becomes available for use after 2023. For assets acquired after 2023 and before 2028, the "half-year" rule is still not applied and the accelerated CCA rules will allow Hydro Ottawa to deduct tax depreciation that is two times the amount of tax depreciation that would otherwise apply in the year that an asset is acquired and available for use. The accelerated CCA rules will no longer be available for assets acquired after 2027.

27

28 Accelerated CCA does not change the total amount of CCA that Hydro Ottawa can deduct over

29 the tax life of the eligible capital assets. This accelerated CCA is only available to be claimed in

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 5 of 11

1 the first tax year that the eligible capital assets are acquired and available for use. By claiming a

2 larger CCA deduction in the first year, Hydro Ottawa will have smaller CCA deductions available

3 in future years. The utility confirms that the accelerated CCA rules from Bill C-97 have been

4 applied in the PILS Tax Models for the 2021-2025 Test Years.

5

The regulatory taxable income in each Test Year includes forecasted CCA, which has been calculated using the accelerated CCA rules applicable in the Historical Years, Bridge Years, and in each Test Year. These forecasted CCA amounts are calculated using the estimated ending Undepreciated Capital Cost ("UCC") balance from the previous year as the opening balance and then adding the net capital additions to determine the UCC balance available for each Test Year. The "half-year" rule has not been applied in each of the 2021-2025 Test Years on net qualifying additions. The accelerated CCA rules allow Hydro Ottawa to deduct three times the amount of tax depreciation that would otherwise apply on qualifying new assets for the 2021, 2022, and 2023 Test Years. These rules also allow Hydro Ottawa to deduct two times the amount of tax depreciation that would otherwise apply on qualifying new assets for the 2024 and 2025 Test Years. Using the new accelerated CCA rules, the maximum allowable CCA has

18

19 7. TAX CREDITS – APPRENTICES & CO-OP STUDENTS

been deducted for all Test Years 2021-2025.

As in previous years, Hydro Ottawa continues to claim the Federal Apprenticeship Job Creation
Tax Credit and the Ontario Co-operative Education Tax Credit. The Federal Apprenticeship Job
Creation Tax Credit is 10% of salaries and wages paid to eligible apprentices, up to a maximum
of \$2,000 per year per apprentice for the first two years of the apprenticeship contract. The
Ontario Co-operative Education Tax Credit is 25% of eligible expenditures up to a maximum of
\$3,000 per student per year.

26

The Ontario Apprenticeship Training Tax Credit is no longer available and has not been included in Test Years 2021-2025. This credit was available during the first 36 months of the apprentice

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 6 of 11

- 1 program for programs that commenced before November 15, 2017. The 2020 Bridge Year is
- 2 forecasted as the last year in which Hydro Ottawa can claim this credit.

3

- 4 Hydro Ottawa has forecasted the Federal Apprenticeship Job Creation and Ontario
- 5 Co-operative Education Tax Credits available and has deducted these tax credits in the PILS
- 6 Tax Models for the Test Years 2021-2025, as summarized in Table 2 and Table 3 below.

7

8

Table 2 – Total Federal Apprenticeship Job Creation and Ontario Co-operative Education Tax Credits for 2021-2025

9

Year	Federal Apprenticeship Tax Credit	Ontario Apprenticeship Tax Credit	Ontario Co-op Education Tax Credit	Total Tax Credits Claimed
2021	\$4,000	\$0	\$81,000	\$85,000
2022	\$4,000	\$0	\$81,000	\$85,000
2023	\$4,000	\$0	\$81,000	\$85,000
2024	\$4,000	\$0	\$81,000	\$85,000
2025	\$4,000	\$0	\$81,000	\$85,000

10

Table 3 – Federal Apprenticeship Job Creation Tax Credits for 2021-2025¹

Hirin	g Year	Tax Credits Received				
Year	Number Hired	2021	2022	2023	2024	2025
2020	2	2				
2021	0					
2022	2		2	2		
2023	0

TOTAL \$\$ CREDITS/YR		\$4,000	\$4,000	\$4,000	\$4,000	\$4,000

_

¹² ¹ As a guide for interpreting the information presented in this table, please see the explanation of the applicability of the Federal Apprenticeship Job Creation Tax Credit provided in section 7 on page 45 of this Schedule.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 7 of 11

- 1 The Ontario Co-operative Education Tax Credit for each of the Test Years 2021-2025 has been
- 2 calculated by forecasting that 27 eligible co-op students will be hired per Test Year, with a tax
- 3 credit per student of \$3,000 (i.e. total credits of \$81,000 per Test Year).

4

5 8. TAX CREDITS – SCIENTIFIC RESEARCH & EXPERIMENTAL DEVELOPMENT

- 6 Hydro Ottawa first filed SR&ED tax credits for the 2017 tax year. The 2017 SR&ED tax credits
- 7 have been assessed but not audited. For the Test Years 2021-2025, the SR&ED tax credits
- 8 have been forecasted based on the 2017 SR&ED tax calculations, as outlined in Table 4 below.
- 9 The forecasted SR&ED tax credits have been reflected as a reduction in the capital
- 10 expenditures and/or operations and maintenance ("O&M") expenses in each Test Year.

11 12

Table 4 - Total SR&ED Tax Credits for 2021-2025

Year	SR&ED Credit Capital	SR&ED Credit O&M	SR&ED Credit Total
2021	\$360,000	\$90,000	\$450,000
2022	\$340,000	\$90,000	\$430,000
2023	\$230,000	\$60,000	\$290,000
2024	\$390,000	\$100,000	\$490,000
2025	\$480,000	\$120,000	\$600,000

13

14 9. **INTEGRITY CHECKS**

15 The following integrity checks have been completed in respect of the PILS Tax Models:

1617

- Depreciation and amortization added back agrees with the numbers disclosed in the rate base section of the Application.
- Capital additions and deductions agree with the rate base section for Historical Years,
 Bridge Years, and Test Years.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 UPDATED May 5, 2020 Page 8 of 11

- Schedule 8 of the most recent tax return year filed with the Application has a closing
 December 31 UCC balance that agrees with the opening historical year UCC balance at
 January 1.
 - Non-distribution assets have been removed from the PILS Tax Models.
- The CCA deductions in the PILS Tax Models for Historical Years, Bridge Years, and Test Years agree with the numbers in Schedule 8.
- Other post-employment benefits and pension expenses are added back on Schedule 1.
- The income tax rate used to calculate the tax expense is consistent with the current legislated rate.
 - The maximum allowable CCA has been deducted for all Test Years 2021-2025.

11

10

4

12 10. PILS VARIANCES

- 13 Details of the actual taxes paid by Hydro Ottawa from 2016-2018, as well as the forecasted
- 14 taxes to be paid for 2019 and 2020, are summarized in Table 5, as updated below. Expected
- 15 PILS for the 2021-2025 rate period are set out in Table 6, as updated below. In addition,
- 16 explanations of the variances that appear in either table are provided.

17

- 18 Copies of Hydro Ottawa's tax returns are appended to this Schedule as the following
- 19 Attachments:

- Attachment 4-4-1(A): 2016 Tax Return
- Attachment 4-4-1(B): 2017 Tax Return²
- Attachment 4-4-1(C): 2018 Tax Return

Attachment 4-4-1(B): 2017 Tax Return includes both the originally filed tax return as well as the amended return for
 the SR&ED claim.

Income Taxes	\$2,224	\$3,881	\$8,604	\$11,533	\$7,590

13 The decrease/increase in PILS from year to year is generally due to changes in capital additions 14 and the associated CCA deductions available compared to the accounting depreciation add 15 back (see section 7 above). Net income before tax is also a contributor to the amount of PILS in 16 a given year.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 4
Schedule 1
UPDATED
May 5, 2020
Page 10 of 11

1 2020 Bridge Year to 2021 Test Year

- 2 As submitted in Hydro Ottawa's original Application, 2021 PILS is forecast to decrease mainly
- 3 due to higher CCA deduction available, driven by the large amount of fixed asset additions
- 4 placed into service in 2021.

5

- 6 However, with the updates to the 2021 Test Year that are based in large part on 2019 actuals,
- 7 PILS is forecast to increase mainly due to higher income and accounting depreciation add back,
- 8 driven by the large amount of fixed asset additions placed into service in 2021.

9

10 2021 Test Year to 2022 Test Year

- 11 As submitted in the utility's original Application, 2022 PILS is forecast to increase mainly due to
- 12 a higher accounting depreciation add back and a lower accelerated CCA deduction, due to
- 13 lower fixed asset additions in 2022 which is creating the higher taxable income.

14

- 15 With the updates to the 2022 Test Year, PILS is forecast to increase mainly due to a higher
- 16 income and accounting depreciation add back, driven by the large amount of fixed asset
- 17 additions placed into service in 2022.

18

19 2022 Test Year to 2023 Test Year

- 20 Similarly, the 2023 PILS<mark>, as originally submitted,</mark> is forecast to increase due to higher
- 21 accounting depreciation and a lower accelerated CCA deduction due to lower fixed asset
- 22 additions in 2023.

- 24 With the updates to the 2023 Test Year, PILS is forecast to increase mainly due to a higher
- 25 income, higher accounting depreciation add back and a lower accelerated CCA deduction due
- 26 to lower fixed asset additions in 2023.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 4
Schedule 1
UPDATED
May 5, 2020
Page 11 of 11

1 2023 Test Year to 2024 Test Year

- 2 2024 PILS is forecast to increase due to higher accounting depreciation and less accelerated
- 3 CCA deduction available. This is attributable to the change in the accelerated CCA rules for
- 4 assets added after 2023 and before 2028. The ability to apply the prescribed CCA rate for an
- 5 eligible class by 1.5 times the net addition is removed beginning in 2024. The suspension of the
- 6 half-year rule continues to stay in effect until the end of 2027.

7

8 2024 Test Year to 2025 Test Year

- 9 2025 PILS is forecast to decrease due to an increase in the accelerated CCA deduction
- 10 available driven by the large amount of fixed asset additions placed into service in 2025. As in
- 11 2024, the CCA deduction is smaller in 2025 than it is in 2021-2023, as a result of the rule
- 12 change in 2024.

Version 1.10

Note: Drop-down lists are shaded blue; Input cells are shaded green.

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your rate application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assigning you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Instructions

Purpos

The purpose of this workbook is to calculate the estimated Payment in Lieu of Taxes (PILs) for the Test Year. The calculation of PILs for the Test Year is on tab To and is based on the inputs on the other tabs.

Tab S Summary is a summary of the amounts to be transferred to the Data Input Sheet of the Revenue Requirement Workform.

Tab S1 Integrity Checks must be completed after the completion of the PILs calculation in this workbook.

Methodology

To calculate the PILs for the Test Year:

- 1) input the balances from the income tax return of the Historical Year in tabs H1 to H13. 2) input the balances for the Bridge Year and the Test Year. Inputs should include:
- non-deductible expenses (Schedule 1 B1 and T1)
- loss carryforward (Schedule 4 B4 and T4)
- capital cost allowance (Schedule 8 B8 and T8)
- non-deductible reserves (Schedule 13 B13 and T13)
- 3) make any other adjustments and inputs required so that the PILs amount calculated for the Test Year on tab T0 is reasonable.

Other Notes

Tabs H0 to H13 relate to the Historical Year.
Tabs B0 to B13 relate to the Bridge Year.
Tabs T0 to T13 relate to the Test Year.

The amounts on tabs H0 to H13 should agree to the tax return filed with the Canada Revenue Agency. Any CRA audit adjustments or corrections should also be reflected.

It is assumed the net income before tax for the Test Year is equal to the Return on Equity. Return on Equity is calculated on tab A.

On tab "A. Data Input Sheet", input the "Rate Base" amount and "Return on Rate Base" amounts.

Integrity Checks

The applicant must ensure the following integrity checks have been completed and confirm this is the case in the table below, or provide an explanation if this is not the case:

	ltem	Utility Confirmation (Y/N)	Notes
	The depreciation and amortization added back in the application's PILs model agree with the numbers disclosed in the rate base section of the application	Y	
	The capital additions and deductions in the CCA Schedule 8 agree with the rate base section for historical, bridge and test years	Υ	
	Schedule 8 of the most recent federal T2 tax return filed with the application has a closing December 31 historical year UCC that agrees with the opening (January 1) bridge year		
	UCC. If the amounts do not agree, then the applicant must provide a reconciliation with explanations. Distributors must segregate non-distribution tax amounts on Schedule 8.	Y	
3			
	The CCA deductions in the application's PILs tax model for historical, bridge and test years (as applicable) agree with the numbers in the CCA Schedule 8 for the same years filed	V	
4	in the application	'	
5	Loss carry-forwards, if any, from prior year tax returns' Schedule 4 agree with those disclosed in the application	NA	
6	A discussion is included in the application as to when the loss carry-forwards, if any, will be fully utilized	NA	
7	CCA is maximized even if there are tax loss carry-forwards	Y	
	Other post-employment benefits and pension expenses that are added back on Schedule 1 to reconcile accounting income to net income for tax purposes agree with the OM&A		
	analysis for compensation. The amounts deducted are reasonable when compared with the notes to the audited financial statements, Financial Services Commission of Ontario	Y	
8	reports, and actuarial valuations.		
9	The income tax rate used to calculate the tax expense is consistent with the utility's actual tax facts and evidence filed in the application	Υ	

			Test Year	Bridge Year	
Rate Base		s	\$ 1,230,736,211	\$ 1,161,334,543

Notes

- 1. The Ontario Energy Board's proxy for taxable capital is rate base.
- 2. Regarding the small business deduction, if applicable,
 - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
 - b. If taxable capital is below \$10 million, the small business rate would be applicable.
 - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, translation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above

While this model has been provided in Excel format and is required to be filed with the applications, the onus remains on the applicant to ensure the accuracy of the data and the results.

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 4 Schedule 1 Attachment E **UPDATED** May 5, 2020 Page 1 of 21

Instructions

The purpose of this workbook is to calculate the estimated Payment in Lieu of Taxes (PILs) for the Test Year. The calculation of PILs for the Test Year is on tab To and is based on the inputs on the other tabs

Tab S Summary is a summary of the amounts to be transferred to the Data Input Sheet of the Revenue Requirement

Tab S1 Integrity Checks must be completed after the completion of the PILs calculation in this workbook.

MethodologyTo calculate the PILs for the Test Year:

- 1) input the balances from the income tax return of the Historical Year in tabs H1 to H13.
- 2) input the balances for the Bridge Year and the Test Year. Inputs should include:
- non-deductible expenses (Schedule 1 B1 and T1)
 loss carryforward (Schedule 4 B4 and T4)
- capital cost allowance (Schedule 8 B8 and T8)
- non-deductible reserves (Schedule 13 B13 and T13)
- 3) make any other adjustments and inputs required so that the PILs amount calculated for the Test Year on tab T0 is reasonable.

Other Notes

```
Tabs H0 to H13 relate to the Historical Year.
Tabs B0 to B13 relate to the Bridge Year.
```

The amounts on tabs H0 to H13 should agree to the tax return filed with the Canada Revenue Agency. Any CRA audit adjustments or corrections should also be reflected.

It is assumed the net income before tax for the Test Year is equal to the Return on Equity. Return on Equity is

On tab "A. Data Input Sheet", input the "Rate Base" amount and "Return on Rate Base" amounts.

Integrity Checks

The applicant must ensure the following integrity checks have been completed and confirm this is the case in the table below, or provide an explanation if this is not the case:

	ltem	Utility Confirmation (Y/N)	Notes
1	The depreciation and amortization added back in the application's PILs model agree with the numbers disclosed in the rate base section of the application	Y	
	The capital additions and deductions in the CCA Schedule 8 agree with the rate base section for historical, bridge and test years	Y	
3	Schedule 8 of the most recent federal T2 tax return filed with the application has a closing December 31 historical year UCC that agrees with the opening (January 1) bridge year UCC. If the amounts do not agree, then the applicant must provide a reconciliation with explanations. Distributors must segregate non-distribution tax amounts on Schedule 8.	Y	
	The CCA deductions in the application's PILs tax model for historical, bridge and test years (as applicable) agree with the numbers in the CCA Schedule 8 for the same years filed in the application	Y	
5	Loss carry-forwards, if any, from prior year tax returns' Schedule 4 agree with those disclosed in the application	NA	
6	A discussion is included in the application as to when the loss carry-forwards, if any, will be fully utilized	NA	
7	CCA is maximized even if there are tax loss carry-forwards	Y	
8	Other post-employment benefits and pension expenses that are added back on Schedule 1 to reconcile accounting income to net income for tax purposes agree with the OM&A analysis for compensation. The amounts deducted are reasonable when compared with the notes to the audited financial statements, Financial Services Commission of Ontario reports, and actuarial valuations.	Y	
9	The income tax rate used to calculate the tax expense is consistent with the utility's actual tax facts and evidence filed in the application	Υ

Notes

- 1. The Ontario Energy Board's proxy for taxable capital is rate base.
- 2. Regarding the small business deduction, if applicable,
 - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
 - b. If taxable capital is below \$10 million, the small business rate would be applicable.
 - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

Instructions

Purnose

Version 1.10

The purpose of this workbook is to calculate the estimated Payment in Lieu of Taxes (PILs) for the Test Year. The calculation of PILs for the Test Year is on tab To and is based on the inputs on the other tabs.

Tab S Summary is a summary of the amounts to be transferred to the Data Input Sheet of the Revenue Requirement Workform.

Tab S1 Integrity Checks must be completed after the completion of the PILs calculation in this workbook.

Methodology

To calculate the PILs for the Test Year:

- 1) input the balances from the income tax return of the Historical Year in tabs H1 to H13. 2) input the balances for the Bridge Year and the Test Year. Inputs should include:
- non-deductible expenses (Schedule 1 B1 and T1)
- loss carryforward (Schedule 4 B4 and T4)
- capital cost allowance (Schedule 8 B8 and T8)
- non-deductible reserves (Schedule 13 B13 and T13)

3) make any other adjustments and inputs required so that the PILs amount calculated for the Test Year on tab T0 is reasonable.

Other Notes

Tabs H0 to H13 relate to the Historical Year.
Tabs B0 to B13 relate to the Bridge Year.
Tabs T0 to T13 relate to the Test Year.

The amounts on tabs H0 to H13 should agree to the tax return filed with the Canada Revenue Agency. Any CRA audit adjustments or corrections should also be reflected.

It is assumed the net income before tax for the Test Year is equal to the Return on Equity. Return on Equity is calculated on tab A.

On tab "A. Data Input Sheet", input the "Rate Base" amount and "Return on Rate Base" amounts.

Integrity Checks

The applicant must ensure the following integrity checks have been completed and confirm this is the case in the table below, or provide an explanation if this is not the case:

Item	Utility Confirmation (Y/N)	Notes
1 The depreciation and amortization added back in the application's PILs model agree with the numbers disclosed in the rate base section of the application	Y	
2 The capital additions and deductions in the CCA Schedule 8 agree with the rate base section for historical, bridge and test years	Y	
Schedule 8 of the most recent federal T2 tax return filed with the application has a closing December 31 historical year UCC that agrees with the opening (January 1) bridge year		
UCC. If the amounts do not agree, then the applicant must provide a reconciliation with explanations. Distributors must segregate non-distribution tax amounts on Schedule 8.	Y	
3		
The CCA deductions in the application's PILs tax model for historical, bridge and test years (as applicable) agree with the numbers in the CCA Schedule 8 for the same years file	V	
4 in the application		
5 Loss carry-forwards, if any, from prior year tax returns' Schedule 4 agree with those disclosed in the application	NA	
6 A discussion is included in the application as to when the loss carry-forwards, if any, will be fully utilized	NA	
7 CCA is maximized even if there are tax loss carry-forwards	Υ	
Other post-employment benefits and pension expenses that are added back on Schedule 1 to reconcile accounting income to net income for tax purposes agree with the OM&A		
analysis for compensation. The amounts deducted are reasonable when compared with the notes to the audited financial statements, Financial Services Commission of Ontario	Y	
8 reports, and actuarial valuations.		
9 The income tax rate used to calculate the tax expense is consistent with the utility's actual tax facts and evidence filed in the application	Y	

			Test Year		Bridge Year	
Rate Base		s	\$	1,363,581,802	\$ 1,315,708,216	
Return on Ratebase						
Deemed ShortTerm Debt %	4.00%	т	\$	54,543,272	W = S * T	
Deemed Long Term Debt %	56.00%	U S	\$	763,605,809	X = S * U	
Deemed Equity %	40.00%	V	\$	545,432,721	Y = S * V	
Short Term Interest Rate	2.75%	z	\$	1,499,940	AC = W * Z	
Long Term Interest	3.40%	AA S	\$	25,962,598	AD = X * AA	
Return on Equity (Regulatory Income)	9.31%	AB	\$	50,779,786	AE = Y * AB T'	L
Return on Rate Base		_ ;	\$	78,242,324	AF = AC + AD + AE	

Q	uestions that must be answered	Historical Year	Bridge Year	Test Year
1.	Does the applicant have any Investment Tax Credits (ITC)?	Yes	Yes	Yes
2.	Does the applicant have any SRED Expenditures?	Yes	Yes	Yes
3.	Does the applicant have any Capital Gains or Losses for tax purposes?	No	No	No
4.	Does the applicant have any Capital Leases?	No	No	No
5.	Does the applicant have any Loss Carry-Forwards (non-capital or net capital)?	No	No	No
6.	Since 1999, has the applicant acquired another regulated applicant's assets?	No	No	No
7.	Did the applicant pay dividends? If Yes, please describe the tax treatment in the manager's summary.	Yes	Yes	Yes
8.	Did the applicant elect to capitalize interest incurred on CWIP for tax purposes?	No	No	No

<u>Notes</u>

- 1. The Ontario Energy Board's proxy for taxable capital is rate base.
- 2. Regarding the small business deduction, if applicable,
 - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
 - b. If taxable capital is below \$10 million, the small business rate would be applicable.
 - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

Instructions

Purnos

Version 1.10

The purpose of this workbook is to calculate the estimated Payment in Lieu of Taxes (PILs) for the Test Year. The calculation of PILs for the Test Year is on tab To and is based on the inputs on the other tabs.

Tab S Summary is a summary of the amounts to be transferred to the Data Input Sheet of the Revenue Requirement Workform.

Tab S1 Integrity Checks must be completed after the completion of the PILs calculation in this workbook.

Methodology

To calculate the PILs for the Test Year:

- 1) input the balances from the income tax return of the Historical Year in tabs H1 to H13. 2) input the balances for the Bridge Year and the Test Year. Inputs should include:
- non-deductible expenses (Schedule 1 B1 and T1)
- loss carryforward (Schedule 4 B4 and T4)
- capital cost allowance (Schedule 8 B8 and T8)
- non-deductible reserves (Schedule 13 B13 and T13)

3) make any other adjustments and inputs required so that the PILs amount calculated for the Test Year on tab T0 is reasonable.

Other Notes

Tabs H0 to H13 relate to the Historical Year.
Tabs B0 to B13 relate to the Bridge Year.
Tabs T0 to T13 relate to the Test Year.

The amounts on tabs H0 to H13 should agree to the tax return filed with the Canada Revenue Agency. Any CRA audit adjustments or corrections should also be reflected.

It is assumed the net income before tax for the Test Year is equal to the Return on Equity. Return on Equity is calculated on tab A.

On tab "A. Data Input Sheet", input the "Rate Base" amount and "Return on Rate Base" amounts.

Integrity Checks

The applicant must ensure the following integrity checks have been completed and confirm this is the case in the table below, or provide an explanation if this is not the case:

Item	Utility Confirmation (Y/N)	Notes
1 The depreciation and amortization added back in the application's PILs model agree with the numbers disclosed in the rate base section of the application	Y	
2 The capital additions and deductions in the CCA Schedule 8 agree with the rate base section for historical, bridge and test years	Y	
Schedule 8 of the most recent federal T2 tax return filed with the application has a closing December 31 historical year UCC that agrees with the opening (January 1) bridge year		
UCC. If the amounts do not agree, then the applicant must provide a reconciliation with explanations. Distributors must segregate non-distribution tax amounts on Schedule 8.	Y	
3		
The CCA deductions in the application's PILs tax model for historical, bridge and test years (as applicable) agree with the numbers in the CCA Schedule 8 for the same years file	V	
4 in the application		
5 Loss carry-forwards, if any, from prior year tax returns' Schedule 4 agree with those disclosed in the application	NA	
6 A discussion is included in the application as to when the loss carry-forwards, if any, will be fully utilized	NA	
7 CCA is maximized even if there are tax loss carry-forwards	Υ	
Other post-employment benefits and pension expenses that are added back on Schedule 1 to reconcile accounting income to net income for tax purposes agree with the OM&A		
analysis for compensation. The amounts deducted are reasonable when compared with the notes to the audited financial statements, Financial Services Commission of Ontario	Y	
8 reports, and actuarial valuations.		
9 The income tax rate used to calculate the tax expense is consistent with the utility's actual tax facts and evidence filed in the application	Y	

			Test Year	Bridge Year
Rate Base		s	\$ 1,390,889,704	\$ 1,363,581,802

<u>Notes</u>

- 1. The Ontario Energy Board's proxy for taxable capital is rate base.
- 2. Regarding the small business deduction, if applicable,
 - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
 - b. If taxable capital is below \$10 million, the small business rate would be applicable.
 - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

Instructions

Purnos

Version 1.10

The purpose of this workbook is to calculate the estimated Payment in Lieu of Taxes (PILs) for the Test Year. The calculation of PILs for the Test Year is on tab To and is based on the inputs on the other tabs.

Tab S Summary is a summary of the amounts to be transferred to the Data Input Sheet of the Revenue Requirement Workform.

Tab S1 Integrity Checks must be completed after the completion of the PILs calculation in this workbook.

Methodology

To calculate the PILs for the Test Year:

- input the balances from the income tax return of the Historical Year in tabs H1 to H13.
 input the balances for the Bridge Year and the Test Year.
 Inputs should include:
- non-deductible expenses (Schedule 1 B1 and T1)
- loss carryforward (Schedule 4 B4 and T4)
- capital cost allowance (Schedule 8 B8 and T8)
- non-deductible reserves (Schedule 13 B13 and T13)
- 3) make any other adjustments and inputs required so that the PILs amount calculated for the Test Year on tab T0 is reasonable.

Other Notes

Tabs H0 to H13 relate to the Historical Year. Tabs B0 to B13 relate to the Bridge Year. Tabs T0 to T13 relate to the Test Year.

The amounts on tabs H0 to H13 should agree to the tax return filed with the Canada Revenue Agency. Any CRA audit adjustments or corrections should also be reflected.

It is assumed the net income before tax for the Test Year is equal to the Return on Equity. Return on Equity is calculated on tab A.

On tab "A. Data Input Sheet", input the "Rate Base" amount and "Return on Rate Base" amounts.

Integrity Checks

The applicant must ensure the following integrity checks have been completed and confirm this is the case in the table below, or provide an explanation if this is not the case:

	nem	Utility Confirmation (Y/N)	Notes
1	The depreciation and amortization added back in the application's PILs model agree with the numbers disclosed in the rate base section of the application	Y	
2	The capital additions and deductions in the CCA Schedule 8 agree with the rate base section for historical, bridge and test years	Y	
	Schedule 8 of the most recent federal T2 tax return filed with the application has a closing December 31 historical year UCC that agrees with the opening (January 1) bridge year		
	UCC. If the amounts do not agree, then the applicant must provide a reconciliation with explanations. Distributors must segregate non-distribution tax amounts on Schedule 8.	Y	
3			
	The CCA deductions in the application's PILs tax model for historical, bridge and test years (as applicable) agree with the numbers in the CCA Schedule 8 for the same years filed	V	
	in the application	•	
	Loss carry-forwards, if any, from prior year tax returns' Schedule 4 agree with those disclosed in the application	NA	
6	A discussion is included in the application as to when the loss carry-forwards, if any, will be fully utilized	NA	
	CCA is maximized even if there are tax loss carry-forwards	Y	
	Other post-employment benefits and pension expenses that are added back on Schedule 1 to reconcile accounting income to net income for tax purposes agree with the OM&A		
	analysis for compensation. The amounts deducted are reasonable when compared with the notes to the audited financial statements, Financial Services Commission of Ontario	Y	
8	reports, and actuarial valuations.		
9	The income tax rate used to calculate the tax expense is consistent with the utility's actual tax facts and evidence filed in the application	Y	

			Test Year	Bridge Year
Rate Base		s	\$ 1,433,971,888	\$ 1,390,889,704
Return on Ratebase				
Deemed ShortTerm Debt %	4.00%	Т	\$ 57,358,876	W = S * T
Deemed Long Term Debt %	56.00%	U	\$ 803,024,257	X = S * U
Deemed Equity %	40.00%	V	\$ 573,588,755	Y = S * V
Short Term Interest Rate	2.75%	Z	\$ 1,577,369	AC = W * Z
Long Term Interest	3.69%	AA	\$ 29,631,595	AD = X * AA
Return on Equity (Regulatory Income)	9.46%	AB	\$ 54,261,496	AE = Y * AB T1
Return on Rate Base			\$ 85,470,460	AF = AC + AD + AE

Q	uestions that must be answered	Historical Year	Bridge Year	Test Year
1.	Does the applicant have any Investment Tax Credits (ITC)?	Yes	Yes	Yes
2.	Does the applicant have any SRED Expenditures?	Yes	Yes	Yes
3.	Does the applicant have any Capital Gains or Losses for tax purposes?	No	No	No
4.	Does the applicant have any Capital Leases?	No	No	No
5.	Does the applicant have any Loss Carry-Forwards (non-capital or net capital)?	No	No	No
6.	Since 1999, has the applicant acquired another regulated applicant's assets?	No	No	No
7.	Did the applicant pay dividends? If Yes, please describe the tax treatment in the manager's summary.	Yes	Yes	Yes
8.	Did the applicant elect to capitalize interest incurred on CWIP for tax purposes?	No	No	No

<u>Notes</u>

- 1. The Ontario Energy Board's proxy for taxable capital is rate base.
- 2. Regarding the small business deduction, if applicable,
 - a. If taxable capital exceeds \$15 million, the small business rate will not be applicable.
 - b. If taxable capital is below \$10 million, the small business rate would be applicable.
 - c. If taxable capital is between \$10 million and \$15 million, the appropriate small business rate will be calculated.

UPDATED LOST REVENUE ADJUSTMENT MECHANISM

2

1

1. INTRODUCTION

On March 31, 2010, the Ministry of Energy and Infrastructure issued a directive ("2010 Directive") to the OEB to take steps in order to establish Conservation and Demand Management ("CDM") targets to be met by licenced electricity distributors over a four-year 7 period beginning January 1, 2011.1

8

In response to the 2010 Directive, the OEB established the Conservation and Demand Management Code for Electricity Distributors ("CDM Code") in September 2010. In addition, in April 2012 the OEB issued a set of Guidelines for Electricity Distributor Conservation and Demand Management ("2012 CDM Guidelines") which articulated more specific guidance on the obligations and requirements in relation to CDM targets with which distributors were mandated to comply, as stipulated in their licences.² Of note, the 2012 CDM Guidelines provided updated details on the Lost Revenue Adjustment Mechanism ("LRAM") which was 16 set-up to compensate distributors for lost revenues resulting from CDM programs for the 17 2011-2014 period. The CDM Code and 2012 CDM Guidelines were applicable for all activities 18 related to the 2011-2014 CDM Framework.

19

20 Under the 2011-2014 CDM Framework, results were predominantly achieved through the 21 delivery of provincially-developed programs that were funded by the Ontario Power Authority 22 ("OPA") in cooperation with electricity distributors.³ The 2011-2014 framework terminated on

23 December 31, 2014.

²⁴ Ministry of Energy and Infrastructure, *Directive* EB-2010-0216 (March 31, 2010).

²⁵ Ontario Energy Board, Guidelines for Electricity Distributor Conservation and Demand Management,

EB-2012-0003, (April 26, 2012).

References to the OPA remain for activities occurring prior to January 1, 2015. As of January 1, 2015, the functions

²⁸ of the OPA were transferred to the Independent Electricity System Operator through a merger of the two

²⁹ organizations.

In 2013, the Government of Ontario released an updated Long-Term Energy Plan ("LTEP").⁴ A key priority in the 2013 LTEP was reinforcement of the principle of "conservation first" in the electricity sector's planning processes. In conjunction with the implementation of the 2013 LTEP, the Ministry of Energy established a new Conservation First Framework ("CFF"). The CFF was structured around the goal of achieving 7 TWh of electricity savings province-wide from 2015-2020, with programs funded by the Independent Electricity System Operator ("IESO") and delivered by electricity distributors. In turn, the OEB received a directive from the Minister of Energy on March 31, 2014 that required the OEB to promote CDM and establish guidelines for CDM program implementation by electricity distributors. These new CDM guidelines were effective as of January 1, 2015, as part of the launch of the CFF framework.

11

On March 20, 2019, the Minister of Energy, Northern Development and Mines issued a directive to the IESO mandating the discontinuance of the CFF and the establishment of an Interim Framework for CDM programming. Under the Interim Framework, the new province-wide target for CDM savings is 1.4 TWh, with this framework scheduled to expire on December 31, 2020.

16

Subsequent to the discontinuance of the 2015-2020 CFF framework, the OEB issued a letter to distributors on June 20, 2019 stating that distributors should continue to have access to LRAM related to the successful delivery of CFF programs.⁵ In addition, the OEB issued an addendum to both the *Chapter 2* and *Chapter 3 Filing Requirements for Electricity Distribution Rate Applications*, in order to make modifications reflecting the new requirements set forth in the Interim Framework.⁶

23

24 For additional information on the termination of the CFF and the establishment and 25 implementation of the Interim Framework, please see Exhibit 4-1-6: Conservation and Demand 26 Management.

Hydro Ottawa Limited
EB-2019-0261
Exhibit 4
Tab 5
Schedule 1
UPDATED
May 5, 2020
Page 3 of 5

1 The IESO has made monthly Participation and Cost Reports available to electricity distributors

2 from January 1, 2018 to March 31, 2019. These reports include incremental first year energy

3 savings as well as information related to persistence. The OEB has directed that the results

4 from the IESO's 2017 program evaluation should be applied to the January 1, 2018 to March

5 31, 2019 gross unverified savings values, including net-to-gross factors and gross realization

6 rates. To calculate net savings values at the project level, distributors are instructed to rely on

7 results from the IESO's 2017 program evaluation.

8

9 2. LOST REVENUE ADJUSTMENT MECHANISM VARIANCE ACCOUNT

The CDM Guidelines issued in 2012 authorized the establishment of an LRAM variance account ("LRAMVA") Uniform System of Accounts ("USofA") 1568 for the 2011-2014 CDM period to

12 capture, at the customer rate-class, the difference between the following:

13 14

15

16

17

18

The results of the actual verified impacts of authorized CDM activities undertaken by the
electricity distributor for OEB-approved CDM programs and/or OPA-Contracted
Province-Wide CDM programs in relation to activities undertaken by the distributor
and/or delivered for the distributor by a third party under contract (in the distributor's
franchise area);

1920

AND

2122

 The level of CDM program activities included in the distributor's load forecast (i.e. the level embedded into rates).⁸

24

23

25 Account 1568 has also been approved for use for LRAM variances related to the 2015-2020

26 CFF framework.

⁷ Ontario Energy Board, *Addendum to Filing Requirements for Electricity Distribution Rate Applications - 2020 Rate Applications* (July 15, 2019), pages 6-7.

Schedule 1
UPDATED
May 5, 2020
Page 4 of 5

- 1 Hydro Ottawa will follow section 2.4.6.2 of the Chapter 2 Filing Requirements for Electricity
- 2 Distribution Rate Applications, as updated on July 12, 2018 and addended on July 15, 2019,
- 3 which states that electricity distributors must apply for the clearance of energy-related and/or
- 4 demand-related LRAMVA balances attributable to approved energy efficiency programs in a
- 5 Cost of Service ("COS") year. As per this Application, this year is 2021 for Hydro Ottawa's
- 6 purposes.

7

- Moreover, according to an additional set of CDM guidelines issued by the OEB in 2014,
- 9 "[d]istributors should continue to rely on the LRAMVA to track and dispose lost revenues that
- 10 result from approved CDM programs between 2015-2020." At the time of filing this Application,
- 11 Hydro Ottawa can support the 2014 LRAM claims. Hydro Ottawa will provide LRAM claims for
- 12 years after 2014 as part of subsequent updates to this Application. Please refer to Exhibit 4-5-2:
- 13 LRAM Variance Account for details on the disposition of LRAMVA being proposed.

14

- 15 Hydro Ottawa has appended the 2014-2017 annual IESO Final Verified Reports to this
- 16 Schedule, as follows:

17 18

- Attachment 4-5-1(A): IESO Final Verified 2014 CDM Report
- Attachment 4-5-1(B): IESO Final Verified 2015 CDM Summary Report
- Attachment 4-5-1(C): IESO Final Verified 2016 CDM Summary Report
- Attachment 4-5-1(D): IESO Final Verified 2017 CDM Summary Report

22

- In conjunction with the updates being made to this Application, Hydro Ottawa has appended the
- 24 following Attachment to this Schedule:

2526

Attachment 4-5-1(E): 2018 IESO Program Participation and Cost Report

27

⁹ Ontario Energy Board, *Conservation and Demand Management Requirement Guidelines for Electricity Distributors*, EB 2014 0278 (December 19, 2014) undated August 11, 2016), page 11

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 5 Schedule 1 UPDATED May 5, 2020 Page 5 of 5

- 1 As per the aforementioned addendum to the OEB's filing requirements, Hydro Ottawa will rely
- 2 on the IESO's monthly Participation and Cost Reports from January 1, 2018 to March 31, 2019
- 3 for LRAM calculations after 2017.

Program Participation & Cost Report Message from the IESO Reporting Team

The IESO is pleased to provide LDCs with the Monthly Program Participation & Cost Report.

This report is generally posted on the IESO LDC Extranet by the Friday of the week following the 15th of each month. The report provides province-wide and LDC specific program participation and costs to the extent known based on information received by the IESO from all distribution companies and IESO Value Added Service Provider.

The Monthly Program Participation & Cost Report includes preliminary, unverified results based on information received by the IESO. Upon verification of project information through the IESO Evaluation, Measurement and Verification (EM&V) process, results will be reported as 'verified'. Performance against CDM Plan information is also available in this report and is based on the LDC's approved CDM Plan as at the end of the reporting period. Where two or more LDCs have submitted a joint CDM Plan, the IESO will provide a Monthly Program Participation & Cost Report for each LDC included in the CDM Plan.

The IESO strives to improve on the current reporting processes to provide meaningful and timely information to LDCs. Your feedback is encouraged and appreciated. Should you have any feedback, questions or comments on this report please contact us at LDC.Support@ieso.ca.

UPDATED LRAM VARIANCE ACCOUNT

1. INTRODUCTION

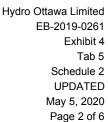

As part of the updates to this Application for 2019 actuals, Hydro Ottawa is seeking Lost Revenue Adjustment Mechanism ("LRAM") recovery in the amount of (\$2,733,351), including principal of (\$2,506,838) and carrying charges of (\$226,513). As originally submitted, Hydro Ottawa requested an LRAM recovery of \$(491,812), including principal of \$(444,449) and carrying charges of \$(47,363). This updated amount represents Conservation and Demand Management ("CDM") savings reported in 2014 and includes the adjustments for 2013, 2015, and 2016. The LRAM calculation is included in UPDATED Attachment 9-1-1(A): OEB Workform - Deferral and Variance Account (Continuity Schedule). In addition, please refer to UPDATED Exhibit 9-3-1: Disposition of Deferral and Variance Accounts for details regarding the disposition period and rate riders for the LRAM variance account ("LRAMVA").

At the time of filing this Application, Hydro Ottawa can support the 2014 LRAM claims. Hydro Ottawa may provide further LRAM claims for years after 2014 as part of future updates to this Application.

At the time of filing updates to this Application which account for 2019 actuals, Hydro Ottawa can support the 2014, 2015, and 2016 LRAM claims. Hydro Ottawa does not intend to propose any further years to be cleared at this time.

2. INPUT ASSUMPTIONS

Hydro Ottawa confirms that it is using the most recent input assumptions available for calculating lost revenue at the time of filing this Application. This includes the final 2014 to 2017 verified results report from the Independent Electricity System Operator ("IESO") and the Program Participation & Cost Report for 2018, dated February 15, 2019. For detailed savings inputs for 2014, please refer to Attachment 4-5-2(A): OEB Workform - 2014 LRAM VA Workform

and Attachment 4-5-2(B): OEB Workform - 2014 Adjustments - LRAM VA Workform. After accounting for 2019 actuals, Attachments for 2015 and 2016 LRAM calculation have been included. New Attachments have been included, as follows:

- Attachment 4-5-2(C): OEB Workform 2015 (2011-2014) LRAM VA Workform
- Attachment 4-5-2(D): OEB Workform 2015 (2015-2020) LRAM VA Workform
- Attachment 4-5-2(E): OEB Workform 2016 LRAM VA Workform

Hydro Ottawa confirms that it has relied upon the most recent final IESO CDM reports evaluation from 2014 to 2017 in support of the lost revenue calculation for 2014 to 2016. For 2018 adjustments, Hydro Ottawa followed the guidance provided in the *Chapter 2 Filing Requirements for Electricity Distribution Rate Applications*, as updated on July 12, 2018 and addended on July 15, 2019 ("Filing Requirements"). The IESO's Final Verified 2014, 2015, and 2016 CDM Reports can be found in Attachment 4-5-1(A), Attachment 4-5-1(B), and Attachment 4-5-1(C), respectively.

Hydro Ottawa used its respective OEB-approved variable distribution charges in calculating the lost revenue. Hydro Ottawa confirms that carrying charges are being requested on the LRAMVA. The interest rate used for the calculation of all carrying charges was that which was prescribed by the OEB and published quarterly on its website. Please see UPDATED Exhibit 9-1-1: Summary of Current Deferral and Variance Accounts for further details on the carrying charges.

Hydro Ottawa notes that the OEB has indicated that adjustments to past LRAM claims should not be requested. Hydro Ottawa is seeking recovery of the 2013 adjustments that were first reported on the IESO Final Verified 2014 CDM Report ("2014 Report"). The 2013 adjustments were received after the initial filing of Hydro Ottawa's 2016-2020 Custom Incentive Rate-Setting

Hydro Ottawa Limited EB-2019-0261 Exhibit 4 Tab 5 Schedule 2 UPDATED May 5, 2020 Page 3 of 6

("Custom IR") application, which included the utility's disposal requests.¹ At the time of that application's filing, the OEB had previously directed that "At a minimum, distributors must apply for the disposition of the balance in the LRAMVA as part of their COS applications." In its 2016-2020 application, Hydro Ottawa complied with these instructions.

Subsequent to Hydro Ottawa's approved disposal, the OEB clarified that the LRAMVA account disposition was related to the calendar year rather than the IESO report. Had this clarification been made prior to Hydro Ottawa requesting disposition, the utility would have considered it prudent to wait to clear the 2013 year (given that the IESO reports could include significant adjustments). As such, Hydro Ottawa is requesting only the 2013 adjustments related to the 2014 Report and believes that this falls within prospective treatment of changes in requirements.

In addition, at this time Hydro Ottawa will not request disposition of LRAM amounts after 2014 until it has determined that no material adjustments are outstanding related to years after 2014. Hydro Ottawa will provide an update on this matter at a later point in this Application's proceeding.

By way of the filing of updates to this Application to account for 2019 actuals, Hydro Ottawa is requesting to dispose of LRAM amounts to the end of 2016.

For lost revenue in relation to streetlights, Hydro Ottawa has maintained a database of converted lights which tracks the original light fixture kWh and kW, as well as the kWh and kW after the light has been converted. Hydro Ottawa has used this data to support the streetlight lost revenue claim.

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

¹ Hydro Ottawa Limited, *2016-2020 Custom Incentive Rate-Setting Distribution Rate Application*, EB-2015-0004 (April 29, 2015).

² Ontario Energy Board, Chapter 2 - Cost of Service Rate Applications Based on a Foreward Test Year (July 18, 2014).

3. CDM PROGRAMS AND INITIATIVES BY RATE CLASS

Table 1 shows the Lost Revenue from the IESO Final Verified Annual 2014 CDM Report by rate class and by year.

Table 1 – Lost Revenue by Year by Rate Class - 2014 Report³

	2013	2014	Total
Residential	\$11,116	\$301,347	\$312,463
GS< 50 kW	\$549	\$248,301	\$248,850
Commercial	\$56,120	\$(105,180)	\$(49,061)
Unmetered	\$0	\$(4,051)	\$(4,051)
Streetlighting	\$0	\$(16,390)	\$(16,390)
TOTAL ⁴	\$67,785	\$424,027	\$491,812

Table 2, as updated below, provides a further breakdown and allocation of the commercial class into Hydro Ottawa's > 50 kW commercial classes. (In addition, the revisions presented below to Table 2, as originally submitted, are the result of changing the allocation to the relevant commercial kW. In preparing its updates to account for 2019 actuals, Hydro Ottawa noticed that Table 2, as originally submitted, had used the estimated Non RPP kW).

Table 2 – AS ORIGINALLY SUBMITTED – > 50 kW Commercial Allocation

	kW	Allocated %	Allocated \$
General Service 50 to 1,499 kW	5,288,918	68.9%	\$(33,797)
General Service 1,500 to 4,999 kW	1,422,314	18.5%	\$(9,089)
Large Use	966,207	12.6%	\$(6,174)
TOTAL ⁵	7,677,439	100%	\$(49,060)

³ Breakdown by interest and principal are summarized in Attachment 4-5-2(A): OEB Workform - 2014 LRAM VA Workform and Attachment 4-5-2(B): OEB Workform - 2014 Adjustments - LRAM VA Workform.

⁴ Totals may not sum due to rounding.

⁵ Ibid.

Table 2 – AS REVISED – > 50 kW Commercial Allocation

	kW	Allocated %	Allocated \$
General Service 50 to 1,499 kW	6,816,104	72.6%	\$(35,623)
General Service 1,500 to 4,999 kW	1,518,349	16.2%	\$(7,935)
Large Use	1,052,899	11.2%	\$(5,503)
TOTAL ⁶	9,387,352	100%	\$(49,061)

Table 2 – UPDATED FOR 2019 ACTUALS – > 50 kW Commercial Allocation

	kW	Allocated %	Allocated \$
General Service 50 to 1,499 kW	6,702,839	73.3%	\$(35,981)
General Service 1,500 to 4,999 kW	1,429,266	15.6%	\$(7,672)
Large Use	1,007,309	11.0%	\$(5,407)
TOTAL ⁷	9,139,414	100%	\$(49,061)

For 2014, Hydro Ottawa does not have customer level data to allocate savings to the > 50 kW customer classes. The utility has continued to use the same methodology for disposing of LRAM claims for the 2014 Report as was used for the 2011-2013 reports. Hydro Ottawa confirms that, for years after 2014, customer level data will be used to allocate savings to customer classes.

Table 3 below presents a summary of the Lost Revenue being claimed by Hydro Ottawa for the 2014-2016 years by rate class and by year.

⁷ Ibid.

2021 Hydro Ottawa Limited Electricity Distribution Rate Application

⁶ Ibid.

Table 3 – Lost Revenue by Year by Rate Class 2014-2016

	2014	2015	2016	Total
Residential	\$312,463	\$757,287	\$783,443	\$1,853,194
GS< 50 kW	\$248,850	\$424,600	\$148,643	\$822,093
General Service 50 to 1,499 kW	\$(35,981)	\$143,676	\$(342,987)	\$(235,293)
General Service 1,500 to 4,999 kW	\$(7,672)	\$60,292	\$91,021	\$143,641
Large Use	\$(5,407)	\$20,538	\$141,742	\$156,872
Unmetered	\$(4,051)	\$0	\$0	\$(4,051)
Streetlighting	\$(16,390)	\$0	\$13,285	\$(3,104)
TOTAL ⁸	\$ 491,812	\$ 1,406,393	\$ 835,147	\$ 2,733,351

CDM programs/initiatives by rate class indicating the energy savings (kWh) and peak demand (kW) savings assigned to the programs/initiatives are available in Attachment 4-5-2:(A) OEB Workform - 2014 LRAM VA Workform and Attachment 4-5-2(B): OEB Workform - 2014 Adjustments - LRAM VA Workform, as well as the Attachments listed in section 2 above for 2015 and 2016 LRAM calculations. For descriptions of these initiatives, please see the following IESO annual reports appended to this Schedule:

- Attachment 4-5-1(A): IESO Final Verified 2014 CDM Report
- Attachment 4-5-1(B): IESO Final Verified 2015 CDM Summary Report
- Attachment 4-5-1(C): IESO Final Verified 2016 CDM Summary Report
- Attachment 4-5-1(D): IESO Final Verified 2017 CDM Summary Report

4. OEB-APPROVED PROGRAMS

Hydro Ottawa did not undertake any OEB-approved CDM programs since 2014. All CDM programs were IESO-funded. Thus, as per section 6.1.1 of the Conservation and Demand Management Code, no separate third-party independent verification is required.⁹

⁸ Totals may not sum due to rounding.

⁹ Ontario Energy Board, Conservation and Demand Management Code for Electricity Distributors (September 16, 2010), page 14.

Lost Revenue Adjustment Mechanism Variance Account (LRAMVA) Work Form

Version 4.0 (2020)

Generic LRAMVA Work Forms

Worksheet Name	Description
1. LRAMVA Summary	Tables 1-a and 1-b provide a summary of the LRAMVA balances and carrying charges associated with the LRAMVA disposition. The balances are populated from entries into other tabs throughout this work form.
1-a. Summary of Changes	Tables A-1 and A-2 include a template for LDCs to summarize changes to the LRAMVA work form.
2. LRAMVA Threshold	Tables 2-a, 2-b and 2-c include the LRAMVA thresholds and allocations by rate class.
3. Distribution Rates	Tables 3-a and 3-b include the distribution rates that are used to calculate lost revenues.
3-a. Rate Class Allocations	A blank spreadsheet is provided to allow LDCs to populate distributor specific rate class percentages to allocate actual CDM savings to different customer classes.
4. 2011-2014 LRAM	Tables 4-a, 4-b, 4-c and 4-d include the template 2011-2014 LRAMVA work forms.
5. 2015-2020 LRAM	Tables 5-a, 5-b, 5-c and 5-d include the template 2015-2020 LRAMVA work forms.
6. Carrying Charges	Table 6-b includes the variance on carrying charges related to the LRAMVA disposition.
7. Persistence Report	A blank spreadsheet is provided to allow LDCs to populate with CDM savings persistence data provided by the IESO.
8. Streetlighting	A blank spreadsheet is provided to allow LDCs to populate data on streetlighting projects whose savings were not provided by the IESO in the CDM Final Results Report (i.e., streetlighting projects).

This Workbook Model is protected by copyright and is being made available to you solely for the purpose of filing your application. You may use and copy this model for that purpose, and provide a copy of this model to any person that is advising or assisting you in that regard. Except as indicated above, any copying, reproduction, publication, sale, adaptation, modification, reverse engineering or other use or dissemination of this model without the express written consent of the Ontario Energy Board is prohibited. If you provide a copy of this model to a person that is advising or assisting you in preparing the application or reviewing your draft rate order, you must ensure that the person understands and agrees to the restrictions noted above.

LRAMVA Work Form: Instructions

Version 4.0 (2020)

Tab	Instructions
LRAMVA Checklist/Schematic Tab	The LRAMVA work form was created in a generic manner for use by all LDCs. There are some elements that are not applicable at this time (i.e. 2019 and 2020 related components) but have been included in an effort to avoid major updates in the future. Distributors should follow the checklist, which is referenced in this tab of the work form and listed below:
	o Highlight changes to this work form made by the LDC, if any, and provide rationale for the change in Tab 1-a.
	o Include any necessary assumptions the LDC has to make in its LRAMVA work form in the "Notes" section of the work form.
	o Provide documentation on the LRAMVA threshold by providing the reference and source material from the LDC's cost of service proceeding where its most recent load forecast was approved.
	o Include a copy of initiative-level persistence savings information that was verified by the IESO. Persistence information is available upon request from the IESO.
	o Apply the IESO verified savings adjustments to the year it relates to. For example, savings adjustments to 2015 programs will be provided to LDCs with the 2016 Final Results Report. The 2015 savings adjustments should be included in the 2015 verified savings portion of the work form.
	o Provide documentation or data substantiating savings from projects that were not provided in the IESO's verified results reports, inserted in Tab 8 (i.e., streetlighting projects), as applicable.
	o Provide documentation or analysis on how rate class allocations were determined by customer class and program each year, inserted in Tab 3-a.
Tab 1. LRAMVA Summary	Distributors are required to report any past approved LRAMVA amounts along with the current LRAMVA amount requested for approval. There are separate tables indicating new lost revenues and carrying charges amounts by year and the totals for rate rider calculations.
Tab 1-a. Summary of Changes	Distributors should list all significant changes and changes in assumptions in the generic work form affecting the LRAMVA.
Tab 2. LRAMVA Threshold	Distributors should use the tables to display the LRAMVA threshold amounts as approved at a rate class level. This should be taken from the LDC's most recently approved cost of service application.
Tab 3. Distribution Rates	Distributors should complete the tables with rate class specific distribution rates and adjustments as applicable.
Tab 3-a. Rate Class Allocations	A tab is provided to allow LDCs to include documentation or analysis on how rate class allocations for actual CDM savings were determined by customer class and program each year. The rate class allocations would support the LRAMVA rate class allocation figures used in Tabs 4 and 5.
Tabs 4 and 5 (2011-2020)	Distributors should complete the lost revenue calculation for 2011-2014 program years and 2015-2020 program years, as applicable, by undertaking the following:
	o Input or manually link the savings, adjustments and program savings persistence data from Tab 7 (Persistence Report) to Tabs 4 and 5. As noted earlier, persistence data is available upon request from the IESO.
	o Ensure that the IESO verified savings adjustments apply to the program year it relates to. For example, savings adjustments related to 2012 programs that were reported by the IESO in 2013 should be included in the 2012 program savings table.
	o Confirm the monthly multipliers applied to demand savings. If a different monthly multiplier is used than what was confirmed in the LRAMVA Report, provide rationale in Tab 1-a and highlight the new monthly multiplier that has been used.
	o Input the rate class allocations by program and year to allocate actual savings to customers. If a different allocation is proposed for adjustments, LDCs must provide the supporting rationale in Tab 1-a and highlight the change.
	o Provide assumptions about the year(s) in which persistence is captured in the load forecast via the "Notes" section of each table and adjust what is included in the LRAMVA totals, as appropriate.
Tab 6. Carrying Charges	Distributors are requested to calculate carrying charges based on the methodology provided in the work form. This includes updating Table 6 as new prescribed interest rates for deferral and variance accounts become available and entering any collected interest amounts into the "Amounts Cleared" row to calculate outstanding variances on carrying charges.
Tab 7. Persistence Report	Persistence savings report(s) provided by the IESO should be included for the relevant years in the LRAMVA work form. Tab 7 has been created consistently with the IESO's persistence report.
Tab 8. Streetlighting	A tab is provided to ensure LDCs include documentation or data to support projects whose program savings were not provided by the IESO (i.e., streetlighting projects).

Version 4.0 (2020)

General Note on the LRAMVA Model

The LRAMVA work form has been created in a generic manner that should allow for use by all LDCs. There are some elements that are not applicable at this time (i.e., 2019 and 2020 related components). These have been included (but hidden in the work form) in an effort to avoid major updates in the future. This LRAMVA work form consolidates information that LDCs are already required to file with the OEB. The model has been created to provide LDCs with a consistent format to display CDM impacts, the forecast savings component and, ultimately, any variance between actual CDM savings and forecast CDM savings. The majority of the information required in the LRAMVA work form will be provided to LDCs from the IESO as part of the Final CDM Results each year. Please contact the IESO for any reports that may be required to complete this LRAMVA

The LRAMVA work form is unlocked to enable LDCs to tailor it to their own unique circumstances.

LRAMVA (\$) = (Actual Net CDM Savings - Forecast CDM Savings) x Distribution Volumetric Rate + Carrying Charges from LRAMVA balance

Drop Down List (Blue) Important Checklist o Highlight changes to this work form made by the LDC, if any, and provide rationale for the change in Tab 1-a o Include any necessary assumptions the LDC has to make in its LRAMVA work form in the "Notes" section of the work form o Provide documentation on the LRAMVA threshold by providing the reference and source material from the LDC's cost of service proceeding where its most recent load forecast was approved o Include a copy of initiative-level persistence savings information that was verified by the IESO in Tab 7. Persistence information is available upon request from the IESO o Apply the IESO verified savings adjustments to the year it relates to. o Provide documentation or data substantiating savings from projects that were not provided in the IESO's verified results reports, inserted in Tab 8 (i.e., streetlighting projects), as applicable

o Provide documentation or analysis on how rate class allocations were determined by customer class and program each year, inserted in Tab 3-a

Table 1-a. LRAMVA Totals by Rate Class

Please input the customer rate classes applicable to the LDC and associated billing units (kWh or kW) in Table 1-a below. This will update all tables throughout the workform.

The LRAMWA total by rate class in Table 1-a should be used to inform the determination of rate riders in the Deferral and Variance Account Work Form or FM Rate Generator Model. Please also ensure that the principal amounts in column E of Table 1-a capture the appropriate years and amounts for the LRAMWA claim. Column F of Table 1-a should include projectes carrying changes amounts as determined on a rate class basis for Table 1-b also.

NOTE: If the LDC has more than 14 customer classes in which CDM savings was allocated. LDCs must contact OEB staff to make adjust

Table A-1. Changes to Generic Assumptions in LRAMVA Work Form

Please document any changes in assumptions made to the generic inputs of the LRAMVA work form. This may include, but are not limited to, the use of different monthly multipliers to claim demand savings from energy efficiency programs; use of different rate allocations between current year savings and prior year savings adjustments; inclusion of additional adjustments affecting distribution rates; etc. All changes should be highlighted in the work form as well.

LRAMVA Work Form: Distribution Rates

Version 4.0 (2020)

Table 3. Inputs for Distribution Rates and Adjustments by Rate Class

Please complete Table 3 with the rate class specific distribution rates that pertain to the years of the LRAMVA disposition. Any adjustments that affect distribution rates can be incorporated in the calculation by expanding the "plus" button at the left hand bar. Table 3 will convert the distribution rates to a calendar year rate (January to December) based on the number of months entered in row 16 of each rate year starting from January to the start of the LDC's rate year. Please enter 0 in row 16, if the rate year begins on January 1. If there are additional adjustments (i.e., rows) added to Table 3, please adjust the formulas in Table 3-a accordingly.

Table 3-a. Distribution Rates by Rate Class

Table 3-a below autopopulates the average distribution rates from Table 3. Please ensure that the distribution rates relevant to the years of the LRAMVA disposition are used Please clear the rates related to the year(s) that are not part of the LRAMVA claim.

The distribution rates that remain in Table 3-a will be used in Tabs 4 and 5 of the work form to calculate actual and forecast lost revenues. If there are additional adjustments (i.e., rows) added to Table 3, please adjust the formulas from Table 3-a, as well as the distribution rate links in Tabs 4 and 5.

LRAMVA Work Form: Determination of Rate Class Allocations

Version 4.0 (2020)

Instructions

LDCs must clearly show how it has allocated actual CDM savings to applicable rate classes, including supporting documentation and rationale for its proposal. This should be shown by customer class and program each year.

This information is provided in UPDATED Exhibit 4-5-2: LRAM Variance Account

LRAMVA Work Form: Carrying Charges by Rate Class

Version 4.0 (2020)

Legend

User Inputs (Green)

Auto Populated Cells (White)

Instructions (Grey)

- 1. Please update Table 6 as new approved prescribed interest rates for deferral and variance accounts become available. Monthly interest rates are used to calculate the variance on the carrying charges for LRAMVA. Starting from column I, the principal will auto-populate as monthly variances in Table 6-a, and are multiplied by the interest rate from column H to determine the monthly variances on carrying charges for each rate class by year.
 - 2. The annual carrying charges totals in Table 6-a below pertain to the amount that was originally collected in interest from forecasted CDM savings and what should have been collected based on actual CDM savings. As the amounts calculated in Table 6-a are cumulative, LDCs are requested to enter any collected interest amounts into the "Amounts Cleared" row in order to clear the balance and calculate outstanding variances on carrying charges.
 - 3. Please calculate the projected interest amounts in the LRAMVA work form. Project carrying charges amounts included in Table 6-a should be consistent with the projected interest amounts included in the DVA Continuity Schedule. If there are additional adjustments required to the formulas to calculate the projected interest amounts, please adjust the formulas in Table 6-a accordingly.

Table 6. Prescribed Interest Rates

Table 6-a. Calculation of Carrying Costs by Rate Class
