

Ontario's 2019 System-Wide Electricity Supply Mix

For more information on Ontario's supply mix, [visit oeb.ca](http://oeb.ca).

Ontario's electricity supply comes from various sources. Throughout 2019, Ontario's reliance on power sources such as nuclear energy and gas declined slightly, and alternative power sources such as water, wind and solar PV increased slightly. **Ontario's electricity supply mix is expected to continue to change throughout and beyond 2020 as industry and consumer needs evolve.**

* Includes Lennox, dual fuel (natural gas/bioenergy) consistent with IESO.

** IESO's embedded generation data set merges biomass and gas.

*** Non-Contracted represents a variety of fuel types that the IESO is unable to categorize due to a lack of information from Local Distribution Companies (LDC's).
