

Investing in your community

Presented by: Tymon Armstrong
Presentation date: July 22, 2026

Viseneau cable replacement overview

- Hydro Ottawa infrastructure and equipment located in this area is reaching the end of its life and has had a recent history of faults
- To improve the reliability of your service and to meet the growing electricity demand in your community, we will be replacing underground infrastructure
- The project includes the replacement of all existing underground cables and installation of new underground duct work and protective piping
- The Viseneau cable replacement project is scheduled to begin towards the end of July 2026, and is estimated to be completed by the end of November 2026
- This project is part of Hydro Ottawa's largest grid investment program designed to modernize our grid, and ensure a sustainable and reliable electricity supply

Community benefits

- This work will help increase the reliability of power for residents and businesses in the area
- This project will reduce the frequency of outages, and improve the overall resilience of the area's electricity system
- Ensuring a stable power supply is essential to keeping pace with our community's growing energy needs

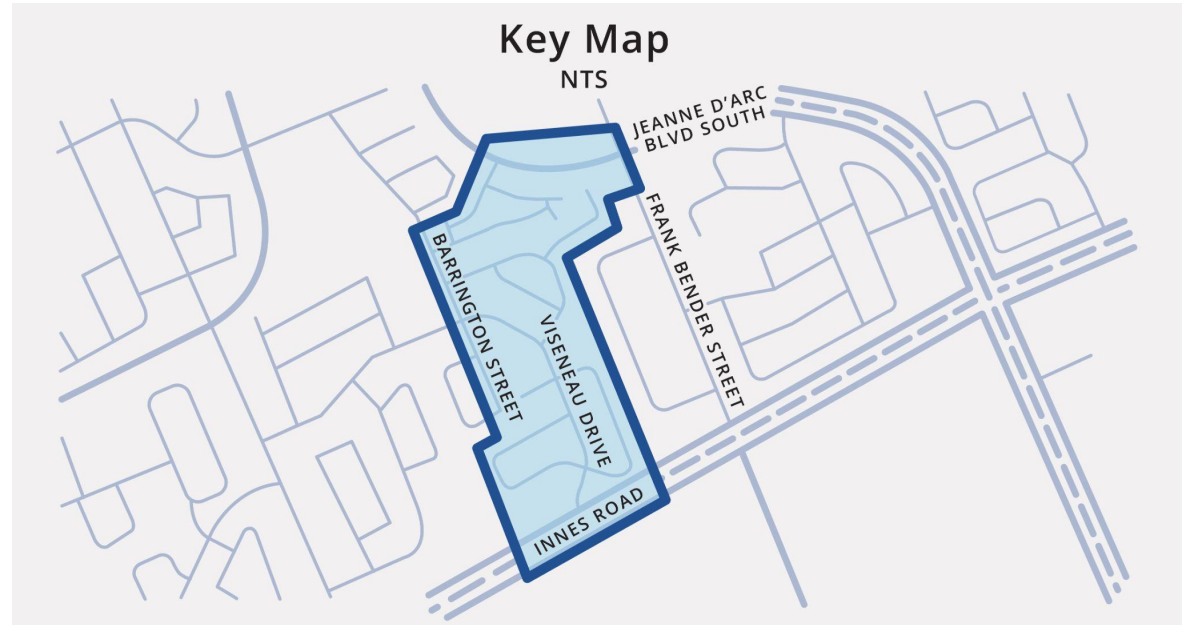

Project details

As part of the Viseneau cable replacement project, we will:

- Excavate and replace existing underground cables, including the installation of approximately 4,500 metres of high-voltage underground cables
- Install new underground duct work and protective piping, including four new cable chambers and 15 concrete-encased road crossings

Where

Châteauneuf, in the limits of Innes Road, Barrington Street, Jeanne D'Arc Boulevard South, and Viseneau Drive.

Community considerations

Restoration

- Property reinstatement will follow construction. Excavated holes will initially be filled with sand to ensure immediate safety
- Final reinstatement, including topsoil and seeding, will be completed when temperatures and thawing allow and to meet City of Ottawa guidelines

Vegetation management

- Thoughtfully consider vegetation and only remove what's absolutely necessary

Safety

- Install construction signage along the corridors
- Reduce lanes and close sidewalks at site
